BARNHART BROS. & SPINDLER

TYPE FOUNDERS

CHICAGO, ILLINOIS, U. S. A.

TO THE TRADE

NO better evidence is needed of our position in the van of the great forward and upward movement in the printing industry than that disclosed by the contents of this book. A comparison with our earlier specimens will show the marked advance we have made in the art of letter designing, and an examination of our product will prove our progress in letter founding.

All of this has been possible through the patronage of our printer friends to whom we cordially acknowledge our indebtedness. Without this hearty support we could not have attained the perfection we have reached; without it we would have lacked the incentive that has enabled us to lead our competitors.

In this specimen book we present for the first time, in a fixed and permanent manner, our latest and best productions. We are certain that it will be thoroughly and appreciatively examined, and intelligently criticised; that something of the pride we have in it will be imparted to those interested. But only ourselves can know the amount of thoughtful care and sustained effort expended in its production.

Herein we show more faces cast Point-Line, Point-Set, Point-Body, than can be found in any specimen book ever issued. Only Superior Copper-Mixed Metal, the most durable known, is used.

As we lead in Type, so do we lead in the production of Chases, Brass Galleys, Electrotypes, Leads, Slugs and the full line of Printing Supplies.

The Book is a Complete Compendium; the only book of its kind needed in a printing office; a well-rounded, instructive, valuable book. We recommend it to the careful study of every printer.

BARNHART BROS. & SPINDLER

Chicago, Ill., U. S. A.

THIS SPECIMEN BOOK SUPERSEDES ALL
TYPE BOOKS ISSUED BY US IN THE PAST.

Medal awarded Barnhart Bros. & Spindler, at the World's Columbian Exposition, at Chicago in 1893.

DO NOT MUTILATE THIS SPECIMEN BOOK
BY CUTTING OUT LINES OF TYPE OR CUTS.
QUOTE ONLY NAME AND NUMBER AND
YOU WILL RECEIVE WHAT YOU ORDER.

POINT-LINE, POINT-SET, POINT-BODY

A PERFECT LINING SYSTEM

To our lot as twentieth century type foundry has fallen the task of devising and putting into practice a lining system which embodies the all-in-all of type founding perfection.

The average printer probably does not realize how many different conditions must be constantly taken into account, and that only by everlasting vigilance can a lining system as perfect as ours be successfully maintained.

Barnhart Bros. & Spindler were the first to use the iteration, Point-Line, Point-Set, Point-Body, in connection with a lining system. What more appropriate words could have been employed? Soon after the adoption of the Point-Body system, we inaugurated a self-justifying system of cast type faces, which was introduced to the public as Point-Set; naturally when we established our lining system we added to the iteration, Point-Body and Point-Set, the word Point-Line. Let us consider carefully the integral features of a perfect lining system:

POINT-LINE

Faces are cast upon the following three well-known lines:

UNIFORM-LINE:—The line upon which is cast all roman and old style body and book faces, leaders, and the majority of job faces, is so devised that the proper relative proportion between ascending and descending letters may be cast with a minimum of kerns. All Uniform-Line cast faces line with one another, body for body, and all inter-body faces may be lined together by the use of point lead and slug justification. Uniform-Line was so devised that in the majority of inter-body linings, the two-point lead or multiple of same could be employed. Uniform-Line permits the casting, entirely upon the body, of the same proportionate length of descender in the larger bodies as in the smaller bodies.

CAP-LINE:—The line upon which is cast all title, two-line, and other faces when no lower case accompanies. Upon examination of the line chart on opposite page, it will be seen that the faces in the several groups of bodies, viz: 36-point and smaller, 42 to 66-point inclusive, and 72 to 108-point inclusive, all line with each other at the bottom without justification, and any face in any one group may be lined with any face in any other group with the use of a two-point lead or multiple thereof.

TEXT-LINE:—A line placed higher upon the body, permitting a variation in the proportion of the ascending and descending letters. All Scripts and Texts and such faces which are now in vogue with the long descending letters, are cast upon the Text-Line. The Text-Line in each body is two points, or a multiple of two points, above the Uniform-Line, thus simplifying inter-linings between the Text and Uniform-Line cast faces.

POINT-SET

Point-Set cast type, in connection with our system of Point-Set cast spaces, quads and accurately cut leads, slugs, brass and copper thin spaces, all unite to form a simple system of justification.

POINT-BODY

Under this head are to be classified the following component features:

FIRST:—The metal which should combine the following essential qualities: Lightness, Toughness, Hardness and Durability. Superior Copper-Mixed combines the above features perfectly.

SECOND:—Accuracy as to body and height are items of very great importance. Since the introduction of the Point-Line, Point-Set, Point-Body Lining System, we have redoubled our efforts to secure the highest degree of accuracy by the inauguration of the most rigid system of inspection ever attempted by any type founder.

THIRD:—Depth of counter—a detail in the cutting of type faces, so little taken into account by many type founders. Our faces are cut the deepest, thus insuring the depth of counter so essential to the life of type. Without deep cut counters, good stereotyping and electrotyping can not be expected. Deep counters do away with the filling up of type on long press runs.

Grand Prix and Medal awarded Barnhart Bros. & Spindler at the Paris Exposition held in 1900.

GENERAL INFORMATION

HOW TO ORDER GOODS.

By observing the following rules in making up orders customers will avoid annoyance and delay.

CREDIT.—If you have had no previous dealings with us supply us with *available* references, and then allow us sufficient time to obtain from them information as to your financial standing. If, being unknown to us, you desire immediate shipment of goods, accompany your order with a remittance covering the same, or enough money to cover express charges both ways, when we will send C. O. D.

TERMS.—Instead of asking our best terms on time, if you will indicate amount of cash you can pay down and the shortest time in which you can pay the balance, business will be facilitated, and a conclusion arrived at in much less time than if you write to learn the best we can do. You best know your circumstances and resources.

BE EXPLICIT.—In ordering goods explicitness is essential. Order every article by its name and number as given in the specimen book, and we will have no difficulty in understanding just what you want. "Send me one font of 8-Point Modern Gothic." is better than saying "Send me a font of 8 point Gothic shown on page 278 of your Specimen Book." In the first instance we know at a glance just what you want; in the last we must refer to the catalogue before booking the order. Above all things *never mutilate a specimen book*, as it necessitates looking up and locating every item. Refer to some previous invoice, and obtain your "cue" from it. A specimen book is expensive, and a mutilated one is practically worthless. Take one line of your paper for each item ordered.

OPENING INVOICES.—Don't allow your purchases to lie around the office days before checking up your bill. In justice to the type founder, goods should be checked when opened, and if any omissions occur, prompt notice should be given.

PROOFS OF JOB FONTS.—Always take a proof of each job font before laying, to satisfy yourself if any sort is missing, and also hold the proper person responsible if letters are thrown in the wrong box—a thing often done, and then the innocent type founder is unjustly berated. In making claims for shortages in such cases be sure to accompany your letter with the proofs before mentioned.

SHIPMENTS.

Where shipping instructions are omitted, we will exercise our own best judgment. Customers occasionally order small articles, such as a single font, sent by freight; shipments so made are likely to be lost in transit, and entail extraordinary expenses for drayage charges, etc. When a shipment will weigh less than twenty pounds we advise express shipment. After goods have been properly despatched, whether by mail, ex-

press or freight, the law holds that they are at the purchaser's risk. We cannot hold ourselves responsible for any delay or miscarriage, unless the fault is ours, but we will always aid the customer to recover.

SMALL PACKAGES BY EXPRESS.—The express companies allow on all small *prepaid* packages a special rate. If the package weighs 15 ounces or less, it may be sent for 15 cents; west of the Rocky Mountains the minimum charge is 25 cents; if more than 15 ounces add one cent per ounce. If you wish your package sent by express prepaid *remit the charges with the order*.

GOODS BY MAIL.—If money is remitted for any article to be sent by mail a sufficient sum should be enclosed, in addition to cost of article, to pay postage. Purchasers should remember that the post-office authorities give no scripts for merchandise, consequently all shipments sent this way *are at purchaser's risk*.

WHY SHIPMENTS ARE DELAYED.—Every order received by us is supposed to be filled without *unnecessary* delay. Many times the demand for type of certain styles is so large that we are unable to keep it in stock. Sometimes orders call for goods of outside manufacture, which we must order.

When an order calls for *Wood Type*, a delay of six to ten days in its filling is unavoidable, since these goods are seldom carried in stock even by the manufacturers. *Sorts*, in many cases, are cast to order and sometimes, though rarely with us, are cause for a delay in a shipment. Unless we receive instructions to the contrary, we usually hold an order until we can fill it complete.

MACHINE REPAIRS.

MACHINERY REPAIRS are not ordinarily carried in stock, but for standard machinery we can easily procure them without much delay. If you want repairs for a machine of old pattern, or one not in general use, it is always best to send us the broken part with the order. In all cases give the size, number and maker of press.

OLD METAL.

Old Type, (unmixed with other metals) electrotypes stereotypes and brass, delivered at our foundry will be taken at current prices in exchange for new type.

Old type should be securely boxed and plainly directed to the founder, and shippers name placed on lower left hand corner of the box. The shipper should promptly notify the founder of shipment, and furnish net weight of same. Old type, electrotypes, stereotypes and brass should never be mixed together, as a separate value attaches to each. Always ship as "old metal," and thus save expensive freight charges.

Type melted and run together, zinc plates, metal containing zinc or type and other plates mixed with zinc plates will not be taken at any price.

Plate matter and plate bases furnished printers by Newspaper Unions will not be taken at any price.

BODY ITALIC FONTS

Body Italic fonts are cast to regular scheme and sold in 5 pound fonts or multiples thereof, excepting 5, 5½, 6 and 7-point, which are sold in 2½ pound fonts or multiples thereof.

Body Italic fonts are put up in two packages, Lower case and Points in one and Caps, Points and Figures in another.

Body Italic fonts sold at First Class rate per pound.

JOB FONTS OF SPACES AND QUADS

Put up in packages weighing as follows:

SIZE	WEIGHT		SIZE	WEIGHT		SIZE	WEIGHT	
	LBS	OZ		LBS	OZ		LBS	OZ
3 Point			10 Point	1	3½	36 Point	2	2
3½ Point			11 Point	1	2½	42 Point	2	6
4 Point			12 Point	1	3½	48 Point	2	12
4½ Point			14 Point	1	6	54 Point	3	2
5 Point	1	0	16 Point	1	14	60 Point	3	6
5½ Point	1	0½	18 Point	1	14	66 Point	3	12
6 Point	0	15	20 Point	1	14	72 Point	4	0
7 Point	1	1½	24 Point	1	14	84 Point	4	10
8 Point	1	1	26 Point	1	14	96 Point	5	6
9 Point	1	2½	30 Point	1	14	120 Point	6	10

Spaces and Quads are not put up with Job Fonts excepting Scripts.

Justifiers for Typewriters put up in 1 and 5 pound fonts.

PRICE LIST OF QUADS

Regular stock, point body, 1, 2 and 3 em quads (high or low) of one body, ordered at one time, assorted sizes or separately.

SIZE	LESS THAN 5 LBS.	5 LBS. AND OVER AND LESS THAN 25 LBS.	25 LBS. AND OVER AND LESS THAN 50 LBS.	50 LBS. AND OVER AND LESS THAN 100 LBS.	100 LBS. OR OVER
5 Point.....	\$0.90	\$0.85	\$0.80	\$0.70	\$0.60
5½ Point.....	.74	.62	.53	.45	.40
6 Point.....	.64	.54	.47	.40	.36
7 Point.....	.56	.50	.44	.38	.34
8 Point.....	.52	.45	.40	.36	.32
9 Point.....	.48	.42	.38	.34	.31
10 Point.....	.46	.40	.36	.32	.30
11 Point.....	.44	.38	.34	.30	.28
12 Point.....	.42	.36	.32	.28	.26
14 Pt. and Larger	.40	.36	.31	.26	.24

The list prices on all spaces, en spaces and justifiers less than 1-em body of 18 point and smaller, will be the regular Body weight price and discount; 20 point and larger, 40 cents per pound less prevailing discount.

JOB TYPE FONTS

All of the fonts shown in this specimen book are put up in accordance with the standard scheme of A's printed on page 8.

For the convenience of the printer, we have divided all job fonts into separate parts; the lower case and a proportionate amount of points in one part, and the caps, points and figures in another part.

Job Type weight fonts do not contain spaces and quads.

Job Type Accents when ordered with the font will be charged at the same rate per pound as the font. When ordered separately they will be treated as sorts.

HOW TO ORDER SORTS

The following table shows what each box in the type case will hold and will be found useful in ordering sorts:

a c d h i m n o r s t u.....	2 pounds
e.....	3 pounds
b f g l p v w y and comma.....	15 ounces
k j q x z . : ; - ' ! ? f f i f l and all figures.....	6 ounces
Caps, Small Caps and side sorts.....	5 ounces

A pair of News Cases holds 50 pounds of type, an Italic or Job Case holds 25 pounds.

APPROXIMATE NUMBER OF WORDS IN A SQUARE INCH

In calculating the number of pages a manuscript will occupy, the following table giving number of words to the square inch, may be found useful.

5 Point, leaded.....50	9 Point, solid.....28
5 Point, solid.....69	10 Point, leaded.....16
6 Point, leaded.....34	10 Point, solid.....21
6 Point, solid.....47	11 Point, leaded.....14
7 Point, leaded.....27	11 Point, solid.....17
7 Point, solid.....38	12 Point, leaded.....11
8 Point, leaded.....23	12 Point, solid.....14
8 Point, solid.....32	14 Point, solid.....11
9 Point, leaded.....21	18 Point, solid.....7

2 point leads used as a basis in above table.

ESTIMATE WEIGHT OF BODY TYPE

To ascertain the quantity of plain type required for a newspaper or magazine, or any other work, find the number of square inches and divide the same by four, the quotient will be the approximate weight of matter; but as it is impossible to set the cases entirely clear, it is necessary to add 25 per cent. to large fonts and 33 per cent. to small fonts, to allow for dead letter. The average weight of 12 inches of solid matter set in 13 ems pica measure is 6¼ pounds; if leaded it will weigh about 5¼ pounds. A single column of six column folio, solid, will weigh about 10¼ pounds, requiring about 13 pounds of type, while the same length column leaded with 2 point leads will contain but 7¾ pounds solid matter, requiring about 10 pounds to set the same.

NUMBER OF EMS IN ONE POUND OF TYPE

Four square inches (two by two inches) solid type weighs approximately one pound.

5 Point.....829 ems	9 Point.....256 ems
5½ Point.....686 ems	10 Point.....207 ems
6 Point.....576 ems	11 Point.....171 ems
7 Point.....423 ems	12 Point.....144 ems
8 Point.....324 ems

ICE TENNIS NEXT FAD

Burnwood County Club Proposes to Continue Net Game This Winter.

HOCKEY TO BE INTRODUCED

South Siders Going In for Many Outdoor Sports During the Cold Season.

If the plans that are now under way carry, the Burnwood County Club will institute an innovation in winter sports by playing tennis on the ice this winter. The north part of the tennis courts of the club will be flooded and the courts marked out on the ice and the game continued through the cold season.

In addition to tennis it is contemplated to get up a hockey team and play the popular Canadian game during the frigid season. If possible curling and tobogganing will be added to the list of attractions. A petition is being circulated among the members and already some seventy-five signatures have been attached to it, making a good percentage of the 400 members in the organization.

The scheme was first thought of some two years ago, but it was never pushed until this fall, when a member of the club undertook to promote the plan and found many ready backers.

Type used above: 30 Point Gothic Comp. No. 8; 12 and 6 Point Lin. Gothic No. 111, and 6 Point Roman No. 90.

BRIDGE ON TUNNEL MUST GO.

Marine Men Expect War Department to Order Removal of Washington Street Structure.

That the bridge at Washington street will have to go on order of the War Department is the current report in marine circles. The first official news of the order will come from Washington, but enough has come from the United States Engineer's office here to make marine men feel certain that the engineer has advised the removal of the bridge. The bridge now stands directly on the center of the tunnel, and limits the draft of vessels from six to fourteen inches from what it would be if ships could take the middle of the river and pass over the center of the tunnel. This limit of draft of applies to all commerce of the South Branch of Chicago River.

CHINATOWN WILL CELEBRATE.

Chief O'Neill Allows Fireworks for the New Year's Features Beginning To-Day.

Permission of the Chief of Police to set off fireworks has been obtained by Sam Moy, the "King of Chinatown," for the celebration of the Chinese New Year, which begins to-day. For three days there will be a display of fireworks, and then the Chinamen will settle down to a week of more quiet observance of the holiday.

CHINESE IN NEW OUTRAGE

FOREIGN MISSIONS AT NGANKING ATTACKED—NO LIVES LOST.

Marked Anti-Foreignism Displayed by Provincial Viceroy Believed to Have Approval of Government at Peking—Efforts Being Made to Recover Privileges Held by Westerners at Treaty Port—Japan Sees a Chance for Grab in War Scare.

LONDON, Feb. 16.—The correspondent at Shanghai of the Standard telegraphs as follows:

"News has reached here of another attack on a foreign mission at Nanking, providence of Nanghai, on the left bank of the Yangtsekiang river. No loss of life is reported.

"Yesterday an attempt was made here by a trusted Chinese servant to murder the secretary of the French municipal council while he was asleep. The attempt was frustrated and the assailant was arrested.

"Many of the great provincial viceroys are displaying a marked anti-foreign attitude, which they hardly would dare so openly to assume unless they thought that Peking approved

YELLOW FEVER ON STEAMER

A British Vessel Basil Quarantined at
Galveston Because of Case of
Plague on Board.

VESSEL DETAINED UNDER GUARD.

GALVESTON, Tex., March 17.—A case of yellow fever was discovered aboard the British steamship Basil that arrived in port Saturday afternoon, nine days from Para, Brazil. The case was conveyed to the St. Mary's infirmary, where the patient died Sunday. The ship has been thoroughly fumigated and towed into Bolivar roads, where it will be retained under guard for six days.

MUST PROTECT THE COAL LANDS

The Method of Doing So Is In Itself One
Enormous Proposition.

I am not prepared to say how far we should go. In my judgment, the coal land of the Indian territory should be held for the benefit of Indians. But as to the general proposition of coal and oil lands throughout the country, unquestionably the attitude of the president is right. Some measures must be adopted for their protection, but only after careful examination. The revelations of the last two or three years demonstrate the necessity of reform and re-

IMPORTANCE OF FORESTS

Mr. Hitchcock Spoke Strongly of the Necessity of Preserving Forests, Pointing Out the Great Importance of Tree Life Upon American Life.

He instanced the case of the Mississippi river, which at certain seasons of the year can be crossed below St. Louis on horseback, and he traced this condition to the action of greedy lumbermen who had denuded the forests at the head of this great stream. The cutting down of the trees has removed shade for the snow which falls during the winter, and the hot sun causes it to melt rapidly and the water instead of sinking into the earth, rushes into the streams causing floods at certain seasons and lack of water at others. The secretary heartily commended the work of Gifford Pinchot, saying his policy was absolutely right, and that there should be no let up in it.

The interior is doing everything it can to protect the timber on the public lands, and wherever depredations are committed the offenders are brought to justice if they can be captured. During the last fiscal year 324 cases of depredations upon public timbered lands were reported, the amount of timber cut being valued at \$397,000.

Conditions of Indians Improved.

The former secretary was asked to explain the present situation of the Indians. "I think," he replied, "it has shown an improvement under the administration of the present commissioner. He has managed their affairs extremely well. We

TRAIN WRECK

Cleveland - New York Vestibuled
Train Ditched Near Newton
Junction, Ohio.

MANY PASSENGERS ARE INJURED

Cause of the Accident Was the Spreading
of Rails, Demolishing Rear
End of Train.

WAS RUNNING SIXTY MILES AN HOUR.

Cleveland, Feb. 12.—Train No. 10 the Cleveland - New York vestibuled flyer of the Erie railroad, and one of the finest on the line, was ditched by spreading rails between Phalanx and Newton Junction this afternoon. Of the score or more passengers who were injured it is thought one will die.

The train left Cleveland on time and the accident happened at 2 o'clock and while the train was running sixty miles an hour. The rear portion of the train was completely wrecked, the day coach which was at the end of the regular portion of the train, and the private car of President Joseph Ramsey of Wabash and Wheeling & Lake Erie

GIRL MASTERS ROBBER

Grabs Him by the Arm and Commands the
Return of Her Purse.

"Give me that pocketbook," said Miss May Hall, a 19-year-old student of Northwestern University, to a thief who had grabbed her purse. A hand laid firmly on the trespasser's arm reinforced the command and the pocket-book was returned.

Miss Hall is a student in the musical school and lives at Pears Hall. With a half dozen of her companions she was in Chicago Saturday shopping. Her purse was attached to her belt by a chain. While the party was in State street a pickpocket grabbed the purse, breaking the chain, and attempted to escape in the crowd.

Miss Hall felt a jerk at her belt and saw the thief in time to grab him by an arm. Then she commanded him to return the purse, and after recovering it continued her shopping.

RELICS OF OLD GREECE FOUND.

The most interesting remains of the ancient Sarmatians ever discovered have been unearthed on the banks of the Rost River, Province of Kief.

At a depth of two meters were found traces of ancient incineration, and near several charred bones was picked up a smooth, thick ornament of golden wire,

GIRL LOCKED IN SAFE

Burglars at Evansville, Indiana,
Overpower Cashier to
Loot Safe.

GIRL FIGHTS IN VAIN

Overpowered After the Struggle and
Left Unconscious; No Clew
to the Robbers.

Evansville, Ind., March 17.—[Special.]—Overpowered after a hard fight with thieves, who surprised her last night while at work in the office of her employer, the R. & G. Furniture company here, Miss Jessie White, 19 years old, the cashier, was dragged into the office vault and made a prisoner by the robbers, who carried away between \$4,000 and \$5,000 in currency. The girl was rescued last midnight after her parents had become alarmed over her failure to return home and told the police of her disappearance.

Her employers were notified that the young woman was missing and accompanied the police to their store. On entering the place evidence of a fierce struggle was found. Chairs were overturned, papers scattered on the floor, and the cash drawer was open with only a few dimes left in it.

Found Unconscious and Bleeding.

The vault then was opened and Miss White found on the floor unconscious and bleeding from several cuts on her head and face. She was removed to the Hospital where she has remained unconscious all day. Physicians say her wounds are not fatal, and that she is pro-

Street Bridge.

That the bridge at Washington street will have to go on order of the War department is the current report in marine circles. The first official news of the order will come from Washington, but enough has come from the United States Engineer's office to make marine men feel certain that the engineer has advised the removal of the bridge. The bridge now stands directly on the center of the tunnel, and limits the draft of vessels from six to fourteen inches from what it would be if ships could take the middle of the river and pass over the center of the tunnel. This limit of draft applies to all commerce of the South Branch of the Chicago River.

VALENTINE SENDING STILL VERY POPULAR

Sales of Sentimental Greetings This
Year Heavy as Formerly.

St. Valentine's day, which comes tomorrow, will be signalized with more than the usual number of sentimental messages from lover to sweetheart and vice versa. The assertion that the practice of sending cards of serious or comic aspect to friends anonymously or otherwise on Valentine day is on the wane is disproved by the sales made this year. Wholesale dealers began to experience a heavy demand for their goods a month ago, and at this time the supply practically is exhausted. The retail merchants in turn have found no difficulty in getting rid of their goods. The sale of artistic cards has been especially large. It is the mail carrier more than any other who dislikes the coming of Valentine day. He will be the bearer of many a happy greeting.

A DAY TO DISCUSS ALL THE SMALL PARKS

West Park Commissioners Will Hear All Those
Interested February 25.

All persons interested in various small parks and playgrounds on the West Side have been invited to appear before the West Park commissioners and offer suggestions. Tuesday, February 25th, has been designated by the members of the board as "small parks day."

A skating carnival, the like of which has never been attempted here before, is promised by the promoters, now that they have succeeded in getting the commissioners to co-operate in the undertaking. The superintendent was authorized to proceed with the arrangements and fix the date as early as possible. The residents of this section boast of having the best skating population in the city, and promise that all their champions will be on hand to make the affair memorable.

HIGH-GRADE PRINTERS' ROLLERS

We are headquarters for printers' rollers, and manufacture the very best that can be made. Our composition is noted for its long life and fine working qualities. We make a specialty of rollers for job-presses and of proof and hand-press rollers, and our reasonable charges and prompt shipments should bring us your trade. We make all sizes of cylinder-press rollers and deal in roller composition.

WATERBURY IS SWEEP BY FIRE

Connecticut Town has All Night
Battled with Flames and Busi-
ness Center is Wiped Out.

SURROUNDING TOWNS SEND AID

Militia is Called Out to Guard Streets
and Stop the Work of Thieves Try-
ing to Loot Deserted Residences.

THE STRONG WIND AN OBSTACLE

Waterbury, Conn., Feb. 3, 3 a. m.—[Spec-
cial.]—With a gale blowing at the rate of fifty
miles an hour, the City of Waterbury spent
the night battling for life. Beginning at 7
o'clock with a general alarm, to which the local
department was slow in responding, calling for
help from its immediate neighbors among Con-
necticut cities three hours later, and ending
with a general call upon the fire departments
of southern New England municipalities, the
city kept up an unequal and losing fight.

The total loss will be in the neighborhood of
\$2,000,000, unless the fire, which is now practi-
cally under control, starts up anew, which is
not likely, as most of the big buildings are
gone.

The State militia is guarding the town, and
many thieves have been arrested while trying
to rob residences temporarily deserted.

CHINESE REFORMING

EMPRESS DOWAGER PROPOSES A DARING UNDERTAKING.

System of Tortures Which Are to be Prohibited by
Imperial Edict is Dear to the Mongolians, Even
Though it Cripplens the Women and Sometimes
Kills Them—Intense Suffering is the Cost of the
Desired "Beauty"—Description of Process.

Footbinding is to be abolished in
China by decree of the Empress Dow-
ager, according to a late report from
the Orient. The custom which has
been followed for centuries by Chinese
women of the better classes has been
so vigorously attacked by native soci-
eties and the influence of the mission-
aries has been so powerful that the
Dowager at last is said to be awake to
the welfare of her women subjects.

There is no authoritative record
showing when footbinding became a
fashion in China. Tradition relates
that a certain Empress of China who
reigned in the early days was afflicted
with club feet and that she compelled
all the women of her court to bind
their feet in the attempt to secure
artificially the same deformity which
nature had inflicted upon her.

The custom is peculiar to the full-
blooded Chinese and to the mongrel
races of the southern coast provinces.

WAR VESSELS SUNK IN PANAMA HARBOR

Fierce Engagement Between the Fleets of the
Insurgents and Colombian Government.

GENERAL ALBAN IS KILLED DURING THE BATTLE

United States Cruiser Philadelphia Is on the Scene and
Will Land a Force of Marines if Circumstances
Demand.

Colon, Jan. 20.—Dispatches from Panama tell of a fierce naval engage-
ment in the harbor between the insurgent and government fleets, the
result of an attempt to prevent the landing of rebel forces at Savana.
The battle lasted several hours. Reports regarding the result are con-
flicting, but agree in stating that the Lautaro, a government vessel,
and the Darien, of the rebel fleet, have been sunk, and that General
Alban, the Colombian Governor of Panama, is among the killed.
Other reports say the entire rebel fleet and two government vessels
were sunk.

Six vessels took part in the engagement. The insurgent fleet con-
sisted of the steamers Padilla, Darien and Gaitan.

ROMAN BODY

TYPE FACES

Partly leaded with two-point leads.

5 POINT ROMAN No. 64

THE matter of lining type is so important that every printer should be familiar with the details of our Point-Line, Point-Set, Point-Body Lining System. This system saves the printer many a dollar in composition time, to say nothing of the increased beauty of his work. Every printer has experienced trouble in bringing type on different bodies to line, and in lining rule with type, and therefore knows the great loss of time unavoidable when lining type is not available. Take a legal blank, for instance, in which words in larger type that begin paragraphs, as well as some others, must be lined as near as may be with the letter selected for the body of the work, and in which two-point brass rule must be lined with the type: hours of valuable time must be spent by the compositor having only old-system material at his disposal, because of the necessity for using paper and cardboard to bring about even a semblance of alignment between the various faces and between type and rule. No printer worthy of the name will willingly send out slip-shod work; hence the time spent in lining different faces with each other and with rule is a matter of serious moment. All such expense is unnecessary now, thanks to the Uniform-Line type, and the printer is enabled to pocket the money heretofore expended for work of this kind. The Barnhart Bros. & Spindler Point-Line, Point-Set, Point-Body Lining-System embodies the following well-known and tried lines: Uniform-Line.—The point line in each body to which the majority of faces are cast. All Roman and body faces are cast on this line, as well as the leaders, etc. This line is so placed that properly proportioned descenders can be cast entirely upon the body, free of kerning, from smallest to largest size. All Uniform-Line cast faces will line together body for body without justification; and by the use of point leads or slugs, one size body can be readily made to line with all other sizes. In the majority of cases the difference in line between any two bodies is two points or a multiple thereof. Text-Line.—For such faces as Scripts, Texts, or the like

No printer worthy of the name will willingly send out slipshod work; hence the time spent in lining the different faces with each other and with rule is a matter of serious moment. All such expense is unnecessary now, thanks to the Uniform-Line type, and the printer is enabled to pocket the money formerly expended on work of this kind. The Barnhart Bros. & Spindler Point Line, Point Set, Point Body Lining System embodies the following well-known and tried lines: Uniform-Line.—The point line in each body to which the majority of faces are cast. All Roman and body faces are cast on this line, as well as the leaders, etc. This line is so placed that properly proportioned descenders can be cast entirely upon the body, free of kerning, from the smallest to largest size. All Uniform-Line cast faces will line together body for body without justification; and, by the use of point leads or slugs, one size body can be readily made to line with all other sizes. In the majority of cases the difference in line between any two bodies is two points or a multiple thereof. Text Line.—For such faces as Scripts, Texts, or the like, where a long descender is cut for typographical effect, we have established a point line on each body always varying above the Uniform-Line two points or a multiple thereof. Hence any Text-Line face may be made to line with any face cast on Uniform-Line or Cap-Line in the same way

Lower case alphabet, a to z, 17½ ems.

6 POINT No. 74

THE matter of lining type is so important that every printer should be familiar with the details of Point-Line, Point-Set, Point-Body Lining System. This system saves the printer many a dollar in composition time, to say nothing of the increased beauty of his work. Every printer has experienced trouble in bringing type on different bodies to line, and in lining rule with type, and therefore knows the great loss of time unavoidable when lining type is not available. Take a legal blank, for instance, in which words in larger type that begin paragraphs, as well as some others, must be lined as near as may be with the letter selected for the body of the work, and in which two-point brass rule must be lined with the type; hours of valuable time must be spent by the compositor having only old system material at his disposal, because of the necessity for using paper and cardboard to bring about even a semblance of alignment between the various faces and between type and rule. No printer worthy of the name will willingly send out slipshod work; hence the time spent in lining different faces with each other and with rule is a matter of serious moment. The Barnhart Bros. & Spindler Point-Line, Point-Set, Point-Body Lining System embodies the following well-known and tried lines: Uniform-Line.—The point line in each body to which the majority of faces are cast. All Roman and body faces are cast on this line, as well as leaders, etc. This line is so placed that properly proportioned descenders can be cast entirely upon the body, free of kerning, from smallest to largest size. All Uniform-Line cast faces will line together body for body without justification; and, by the use of point leads or slugs, one size body can be readily made to line with all other sizes. In the majority of cases the difference in line between any two bodies is two points or a multiple thereof. Text-Line.—For such faces as Scripts, Texts, or the like, where a long descender is cut for typographical effect, we have established a point line on each body always varying above the Uniform Line two points or a multiple thereof. Hence any Text-Line face may be made to line with any face cast on Uniform-Line or Cap-Line in the same way that Uniform-Line faces on different bodies are brought to alignment, and the result is obtained as easily. Cap-Line.—For Title, Two-line, and other faces without lower case. All Cap-Line faces on the same bodies line with each other at the bottom without justification. All Cap-Line faces in bodies

This system saves the printer many a dollar in composition time, to say nothing of the increased beauty of his work. Every printer has experienced trouble in bringing type on different bodies to line, and in lining rule with type, and therefore knows the great loss of time unavoidable when lining type is not available. Take a legal blank, for instance, in which words in larger type that begin paragraphs, as well as some others, must be lined as near as may be with the letter selected for the body of the work, and in which two-point brass rule must be lined with the type; hours of valuable time must be spent by the compositor having only old-system material at his disposal, because of the necessity for using paper and cardboard to bring about even a semblance of alignment between the various faces and between type and rule. No printer worthy of the name will willingly send out slip-shod work; hence the time spent in

unavoidably bring about variations in width of bar; the outside bars cannot be made exactly parallel, and, unless they are, the sides and ends cannot be at right angles. Even were it possible to make a hand-welded-and-hand-finished chase accurate in the first place, it would not remain so long, and the larger the chase the worse the trouble. The deflection caused by tight lock-up soon becomes permanent, and lost time and spoiled work follows as matter of course. "That chase is bowed" is heard so often where the inferior hand-welded chases are used that it becomes monotonous.

Cast-iron chases are furnished with platen presses mostly. They are seldom true; when forms are locked up in them they are bound to be "springy," and nothing causes more lost time and spoiled work than a "springy" form. Cast-iron chases break on the slightest pro-

MODERN IDEAS

Never before has such beautiful printing been done as is being turned out at the present time. The every-day work of the modern printer excels the choicest products of a few years ago, and when an attempt is made now-a-days to produce something extra fine the result is often nothing short of marvelous. A truer conception of the artistic, and facilities greatly improved over those at the printer's disposal in former years, are responsible for this satisfying condition of things. Type faces are no longer noted chiefly for their freakishness; on the contrary, designs of today are notable for genuine artistic excellence, and they are of a nature, as a rule, that will always be used. Series shown in our late specimens and in this Specimen Book serve admirably to show the trend of modern ideas in type design.

One thing of decided value to the printer desirous of doing the best work in

Specimens of Barnhart Brothers & Spindler's Lightface No. 7 Series

Cast from Superior Copper-Mixed Metal
In deep cut matrices on the Point-Line, Point-Set, Point-Body
Lining System

Dividend Paying Type, Borders, Rule and Material of every Description

the shortest possible time is Barnhart Bros. & Spindler's Point-lining system. Nothing but ordinary leads or slugs are needed for the lining of Point-line faces on different bodies; if the bodies agree in size the faces line naturally.

This lining system is a far reaching improvement, both in the matter of saving composition time and the improved appearance of the finished work. In the matter of time on work in which rules are to be lined with type the saving is especially noteworthy, as rules may be lined with any Point-line system face as quickly as the same space could be filled with quads.

In a word the improvement brought about by the adoption of our Point-lining system enables the office having type so cast to make a fair profit at prices which with less modern facilities would mean a loss.

It should be the aim of every printer to replace his present outfit of type with Point-line faces as rapidly as possible. The saving in composition sure to result will go far toward paying the cost of the change. We have considerably more than 2,100 separate faces cast on the Point-lining system, to which additions are being made constantly. The variety is ample for every need, includ-

Great Sale New Tan Footwear

The finest, most complete and comprehensive line of Women's and Men's new Tan Shoes and Oxfords, in vici kid, Russia calf and seal leathers, from the latest tan to the deepest browns. All sizes and widths. Made of the very best material obtainable, and by master workmen in the modernly-equipped factory of the Wearwell Shoe Company.

If you want tan shoes that contain all the elements of a perfectly designed and executed piece of footwear, you will find your ideal in this stock.

\$2.10

will be the price for every shoe in the house—none higher—and the first come will get the choice of all we have in the store. Come early, to avoid the rush.

SATURDAY

will be the commencement of this great sale, and we will continue it until all our high grade stock of shoes is sold. With the demand for low shoes at its zenith, the diversity of styles has been greatly increased. You will find the very best styles of the season's favored productions represented in this immense assortment of Women's and Men's Shoes.

5 POINT OLD STYLE NO. 59

THE matter of lining type is so important that every printer should be familiar with the details of our Point-Line, Point-Set, Point-Body Lining System. This system saves the printer many a dollar in composition time, to say nothing of the increased beauty of his work. Every printer has experienced trouble in bringing type on different bodies to line, and in lining rule with type, and therefore knows the great loss of time unavoidable when lining type is not available. Take a legal blank, for instance, in which words in larger type that begin paragraphs, as well as some others, must be lined as near as may be with the letter selected for the body of the work, and in which two-point brass rule must be lined with the type; hours of valuable time must be spent by the compositor having only old-system material at his disposal, because of the necessity of having to use paper and cardboard to bring about even a semblance of alignment between the various faces and between type and rule. No printer worthy of the name will willingly send out slipshod work; hence the time spent in lining different faces with each other and with rule is a matter of serious moment. All such expense is unnecessary now, thanks to the Uniform-Line type, and the printer is enabled to pocket the money heretofore expended for work of this kind. The Barnhart Bros. & Spindler Point-Line, Point-Set, Point-Body Lining System embodies the following well known and tried lines: Uniform-Line.—The point line in each body to which the majority of faces are cast. All Roman and body faces are cast on this line, as well as the leaders, etc. This line is so placed that properly proportioned descenders can be cast entirely upon the body, free of kerning, from smallest to largest size. All Uniform-Line cast faces will line together body for body without justification; and, by the use of point leads or slugs, one size body can be readily made to line with all other sizes. In the majority of cases the difference in line between any two bodies is two points or a multiple thereof. Text-Line.—For such faces as Scripts, Texts, or the like, where a long descender is cut for typographical effect, we have established a point line on each body always varying above the Uniform-Line two points or a multiple thereof. Hence any Text-Line face can be made to line with any face cast on Uniform-Line or Cap-Line in the same way that Uniform-Line faces on different bodies are brought to alignment, and the result is attained as easily. Cap-Line.—For Title, Two-Line, and other faces without lower case. All Cap-Line faces on the same bodies line with each other at the bottom without justification. All Cap-Line faces from the smallest size to 36-point line with each other at the bottom without any justification. All 42-point and larger Cap-Line faces line with each other without any justification. All Cap-Line faces in bodies from the smallest to 36-point will line with 42-point and larger sizes by the use of a 2-point lead. All Cap-Line faces, too, may be lined with any Uniform-Line or Text-Line face with ordinary point-lead justification, the same as Uniform-Line faces on different bodies are lined together, and with no loss of time whatever. The thinking printer upon reading the above can not but be convinced of the superior features offered in the Barnhart Bros. & Spindler Point-Line, Point-Set, Point-Body Lining System. We claim that in inter-body lining combinations, the greatest use of 2-point lead is an important item to be considered. Deep cut matrices, which insure deep counters and shoulders, so necessary for electrotyping, stereotyping, and good presswork, are used in the casting of all Uniform-Line system type. Properly proportioned descenders, cast entirely on the body, is another feature peculiar alone to the Barnhart Lining System.

Lower case alphabet, a to z, 15 ems.

6 POINT CASLON OLD STYLE

THE matter of lining type is so important that every printer should be familiar with the details of our Point-Line, Point-Set, Point-Body Lining System. In the majority of cases the difference in line between any two bodies is two points or a multiple thereof. Text-Line.—For such faces as Scripts, Texts, or the like, where a long descender is cut for typographical effect, we have established a point line on each body always varying above the Uniform Line two points or a multiple thereof. Hence any Text-Line face may be made to line with any face cast on Uniform-Line or Cap-Line in the same way that Uniform-Line faces on different bodies are brought to alignment, and the result is attained as easily. Cap-Line.—For Title, Two-Line, and other faces without lower case. All Cap-Line faces on the same bodies line with each other at the bottom without justification.

Lower case alphabet, a to z, 15½ ems.

*This face matches Linotype Ronaldson Series.

6 POINT FRENCH O. S. NO. 3

THE matter of lining type is so important that every printer should be familiar with the details of our Point-Line, Point-Set, Point-Body Lining System. This system saves the printer many a dollar in composition time, to say nothing of the increased beauty of his work. Every printer has experienced trouble in bringing type on different bodies to line, and in lining rule with type, and therefore knows the great loss of time unavoidable when lining type is not available. Take a legal blank, for instance, in which words in larger type that begin paragraphs, as well as some others, must be lined as near as may be with the letter selected for the body of the work, and in which two-point brass rule must be lined with the type; hours of valuable time must be spent by the compositor having only old-system material at his disposal, because of the necessity for using paper and cardboard to bring about even a semblance of alignment between the various faces and between type and rule. No printer worthy of the name will willingly send out slipshod work; hence the time spent in lining different faces with each other and with rule is a matter of serious moment. All such expense is unnecessary now, thanks to the Uniform-Line type, and the printer is enabled to pocket the money heretofore expended for work of this kind. The Barnhart Bros. & Spindler Point-Line, Point-Set, Point-Body Lining System embodies the following well-known and tried lines: Uniform-Line.—The Point-Line in each body to which the majority of faces are cast. All Roman and body faces are cast on this line, as well as the leaders, etc. This line is so placed that properly proportioned descenders can be cast entirely upon the body, free of kerning, from smallest to largest size. All Uniform-Line cast faces will line together body for body without justification, and by the use of point leads or slugs, one size body can be readily made to line with all other sizes. In the majority of cases the difference in line between any two bodies is two points or a multiple thereof. Text-Line.—For such faces as Scripts, Texts or the like, where a long descender is cut for typographical effect, we have established a point line on each body always varying above the Uniform-Line two points or a multiple thereof. Hence any Text-Line face may be made to line with any face cast on Uniform-Line or Cap-Line in the same way that Uniform-Line faces on different bodies are brought to alignment, and the result is attained as easily. THE TOOLS AND USAGES OF THE EARLY PRINTERS

Types made without any System... From an Adjustable Mould... The Appearance of Early Types... Rudeness of Early Composition... Method of Dictation... Faults of Compositors... Slowness of Improvement... Construction of Hand-Press, with illustration.

THE types of the fifteenth century were made without system. The dimensions of each body and the peculiarities of each face were determined chiefly by the manuscript copy which had been selected as the model. No printer had any idea of the advantages to be derived from a series of regularly graduated sizes, nor of the beauty of a series of uniform faces, nor of the great evils they would impose on themselves and their successors by the use of irregular bodies. Gutenberg's larger bodies were irregularly graduated and of Pointed Gothic face; his smaller bodies were not separated at proper distances, and were of Round Gothic face. The unknown printer had four faces and four bodies of the size English. Caxton had two faces and two bodies each of the sizes Paragon, Great-Primer and English. The types of many printers at Paris and Venice show irregularities of body which seem inexplicable to the modern printer.

A classification by scale of the types of any printer of this period will show that there are often wide gaps between the larger, and confusing proximities between the smaller bodies. The smallest sizes which I have met in any book of the fifteenth century are in the *Decretals of Gregory*, printed in black and red by Andrew Torresani at Venice in 1498, in which book the text is in Bourgeois and the surrounding notes are in Brevier. Nonpareil was first made by Garamond of Paris about the middle of the sixteenth century. Diamond was made by Jannon of Sedan about 1625. Nothing smaller was attempted until 1827, when Henry Didot, then 66 years old, cut a font on the French body of two and one-half points—a body known to American printers as Brilliant, or Half-Nonpareil—about twenty-five lines to the American inch. As the size of every body is determined by the mould in which it is cast, it would seem that there must have been a separate mould for every distinct body. (It has been suggested that these distinct bodies were founded in sand moulds; that a new pattern for the body was made every time a new font was cast; and that the irregularities in body are the results of unintended or undetected variations in the pattern. But this hypothesis cannot be accepted. The small bodies, the sharp edges, close fitting-up and even lining of the types, are peculiarities which could not have been produced by a sand mould, nor by a mould of any plastic material.) This inference is encumbered with fatal objections. The type-mould of hard metal is, and always has been, a very expensive tool, and it cannot be supposed that any early printer made two or four moulds for one body when one mould would have served. It is much more probable that he tried to make one mould serve for two or more bodies. The inventor of the mould may have thought that it should be constructed with adjustments, so that it should cast different bodies as well as different widths of types. The practicability of a mould of this description is properly demonstrated by the old-fashioned adjustable mould for irregular bodies, or by the mould used for casting leads, which can be so enlarged or diminished that it will cast many bodies or thicknesses. If we suppose that this mould was used by Gutenberg for casting the two bodies of the *Letters of Indulgence*, and by the unknown printer of the Netherlands for his four bodies of English, and that it was, of necessity, newly set or adjusted each time a new font was cast, we shall at once have a precise explanation of irregularities which are unaccountable under any other hypothesis. Casting types

8 Point Lining XV Century
Set Solid

without the system, standards and gauges which modern type-founders use, it is not surprising that the first printers made types with difference of body. It was the impracticability of casting in this primitive mould, at different times, types of uniform body, that compelled later type-founders to discard it, and to use instead a mould for each body.

The casting of the types, which was always done in the printing office, was then adjudged a proper part of a printer's trade. The earlier chroniclers said the first types were made of lead and tin. The *Cost Book of the Ripoli Press* specifies these metals, and obscurely mentions another which seems to have been one of the constituents of type-metal. If this conjecture can be accepted, types were probably made in the fifteenth century as they are now, of lead, tin and antimony. Was this obscure metal antimony? The text books say that antimony was, for the first time, set apart as a distinct metal in 1490, by Basil Valentine, a monk of Erfurt. But Madden says that a book supposed to have been printed at Cologne, before the year 1473,

plainly describes antimony as a metal frequently used and much abused by many monks of the thirteenth century in their pharmaceutical preparations. Not one of the millions of types founded during the fifteenth century has been preserved, nor is there in any old book an engraving or a description of a type. This neglected information has been unwillingly furnished by a careless pressman in the office of Conrad Winters, who printed at Cologne in 1476. This pressman, or his mate, when inking a slackly justified form, permitted the inking ball to pull out a thin-bodied type, which dropped sideways on the face of the form. The accident was not noticed; the tympan closed upon the form, and the bed was drawn under the platen. Down came the screw and platen, jamming the unfortunate type in the form, and embossing it strongly in the fibres of the thick wet paper, in a manner which reveals to us the shape of Winters' types more truthfully than it could have been done even by special engraving. The height of this type is a trifle less than one American inch. It agrees exactly with the old French standard (of 1723) for height of type, which was ten and one-half geometric lines, or, by modern French measure, 24 millimetres. The sloping shoulder, or the beard, as it was once called, was made to prevent the blackening of the paper, for it would have been blackened if the shoulder had been high and square. The sloping shoulder, which was in general use in the first quarter of this century, was discarded to meet the requirements of the new art of stereotyping. It was found that these sloping shoulders made projections in the plaster mould, which imperiled the making of an accurate cast. The blackening of the sheer from square shoulders was prevented by altering the mould and placing the shoulder lower on the body. The circular mark, about one-tenth of an inch diameter, on the side of the type, was firmly depressed in the metal, but did not perforate it. As this type had no nick on the body, it is apparent that the circular mark was cast there to guide the compositor. When the type was put in the stick with the mark facing outward, the compositor knew, without looking at the face, that it was rightly placed. There is no groove at the foot. Duverger says that the early types had no jet or breaking-piece; that the superfluous metal was cut off, and the type made of proper height by sawing. These details may seem trifling, but they are of important; they show that, in the more important features, the types of the early printers closely resembled ours.

There is a disagreement among bibliographers about the quantity of types ordinarily cast for a font by the early printers. Some, judging from appearances which show that one page only was printed at an impression, say that they cast types for two or three pages only; others maintain that they must have had very large fonts. That the latter view is correct seems fully established after a survey of the books known to have been printed by Zell, Koburger, Leeu, and others. It would have been impossible to print these books in the short period in which we know they were done, if the printer had not been provided with abundance of types. As

*10 Point Lining XV Century
Set Solid*

the types were made in the printing office, by a quick method, from an alloy which could be used repeatedly for the same purpose, the supply was rarely limited by considerations of expense. Bernard believes that Gutenberg cast for the *Bible of 42 lines* at least 120,000 types, or enough for two sections, or forty pages. He supposes that twenty pages were perfected, and ready for press or under press, while the succeeding twenty pages were in the compositor's hands. This would be the method adopted by the modern printer, and it may have been the method of Gutenberg, but it is probable that the difficulties connected with the new art compelled him to print the book more slowly, and with imperfect system. But the printers who followed him certainly used quick methods. The trades of compositor and pressman, and possibly that of type-caster, were kept about as distinct then as they are now. There were more compositors than pressmen, and the compositors, says Madden, in the heroic age of printing, were not boys, but men of education and intelligence. The early printers who were taught the business that they might become masters had to pay a premium for their education. Caxton said that he had "practysed & learned at [his] grete charge and dispense to ordeyne this said booke in prynte." In the brief time that they gave to the work, their education must have been more theoretical than practical. As the branch of composition required the largest number of workmen, and more intelligence, and less manual labor than any other, it was usually selected by the pupil for practice. Of type-casting and presswork he learned no more than was sufficient to enable him to direct the labors of his future workmen. The knowledge of the trade which the pupil coveted was the ability to practice it on his own account, and this knowledge was, in most instances, satisfactorily acquired when he got a theoretical knowledge of its secret processes.

The frequent specifications of the *foremen* in the earliest notices of printing shows that the mould, with its accompanying matrices, was regarded as the key to the knowledge and practice of the art. As the moulds were made by master mechanics, not bound to secrecy, and as the earlier compositors had some knowledge of the process of type-casting, it was not difficult for a journeyman to become a master printer. When he had bought a type-mould and matrices, he could go to any city and begin to print books. He could cast types and mix ink as he needed them; he could buy paper and the constituents of type-metal in any large town; properly instructed, any joiner could make the press. Many of the early master printers practiced their trade for a few years in one place, and a few years in another, roving about from town to town with a seeming indifference to change which seems unaccountable to the modern printer, who knows how expensive it is to move a printing office. The roving habits of the masters will not seem so strange when it is known that the equipment of the early office was simple, and that the more expensive tools could be carried with little difficulty. This illustration, a fac-simile of one of Amman's engravings of a printing office, is from this book dated 1564. The case for the

12 Point Lining XV Century
Set Solid

type is of one piece and is resting on a rude frame. All the boxes are represented as of the same size, but this is probably an error which is frequently made by designers of this day. The engravings of cases shown by Moxon have boxes of unequal size. No doubt, they were so made from the beginning, for a day's experience would teach any compositor that his case must have a larger box for the letter e than for the letter x. In this, and in many other early illustrations of type-setting, the compositors are seated on stools. In Italy and in Paris, women were employed as compositors.

The early stick was not like the neatly finished iron tool of our time, with steel composing rule and an adjustable screw and knee adapting it to any measure. It was a real stick of wood, a home-made strip of deal, with the side and end-piece tacked on. For every measure, a new stick or retacking of the movable piece was required. The date of the introduction of the stick cannot be fixed, but it was used, without alteration for many years, by the printers of all countries. It is possible that some of the early printers had no sticks. The peculiar workmanship of the unknown printer and of Albert Pfister shows that the types were taken direct from the case and wedged in mortised blocks of wood which served

EXCERPT FROM THE BIOGRAPHY OF BENJAMIN FRANKLIN

FROM my infancy I was passionately fond of reading, and all the money that came into my hands was laid out in the purchasing of books. I was very fond of voyages. My first acquisition was Bunyan's works in separate little volumes; I afterwards sold them to enable me to buy Burton's Historical Collections. They were small chapmen's books, and cheap; forty volumes in all. My father's little library consisted chiefly of books in polemic divinity, most of which I read. I have often regretted that, at a time when I had such a thirst for knowledge, more proper books, had not fallen in my way, since it was resolved I should not be bred to divinity. There was among them Plutarch's Lives, which I read abundantly, and I still think that time spent to great advantage. There was

also a book of Defoe's called An Essay on Projects, and another of Dr. Mather's called An Essay to do Good, which perhaps gave me a turn of thinking, that had an influence on some of the principal future events of my life. ¶ This bookish inclination at length determined my father to make me a printer, though he had already one son, James, of that profession. In 1717 my brother James returned from England with a press and letters to set up his business in Boston. I liked it much better than that of my father, but still had a hankering for the sea. To prevent the apprehended effect of such an inclination, my father was impatient to have me bound to my brother. I stood out sometime, but at last was persuaded and signed the indenture when I was yet but twelve years old. I was to serve an apprenticeship till I was twenty-one years of age, only I was to be allowed journeyman's wages during the last year. ¶ In a little time I made a great progress in the business, and became a useful hand to my brother. I now had access to better books. An acquaintance with the apprentices of booksellers enabled me sometimes to borrow a small one, which I was careful to return soon, and clean. Often I sat up in my chamber reading the greatest part of the night, when the book was borrowed in the evening and to be returned in the morning, lest it should be missing. ¶ After some time a merchant—an ingenious, sensible man, Mr. Matthew Adams, who had a pretty collection of books—frequented our printing-office, took notice of me, and invited me to see his library, and very kindly proposed to lend me such books as I chose to read. ¶ I now took a strong inclination for poetry, and wrote some little pieces. My brother supposing it might turn to account, encouraged me, and induced me to compose two occasional ballads. One was called The Light-House Tragedy, and contained an account of the shipwreck of Captain Worthilake with his two daughters; the other was a sailor song, on the taking of the famous Teach, or Blackbeard, the pirate. They were wretched stuff, in street ballad style; and when they were printed my brother sent me about the town to sell them. The first sold prodigiously, the event being recent and having made a great noise. This success flattered my vanity; but my father discouraged me by criticising my performances and telling me verse-makers were generally beggars. Thus I escaped being a poet, and probably a very bad one; but, as prose writing has been of great use to me in the course of my life,

*Set in 6-point Barnhart Old Style.
Opened with one-point leads.*

BENJAMIN FRANKLIN

and was a principal means of my advancement, I shall tell you how in such a situation I acquired what little ability I may be supposed to have in that way. ¶ There was another bookish lad in the town, John Collins by name, with whom I was intimately acquainted. We sometimes disputed, and very fond we were of argument, and very desirous of confuting one another—which disputatious turn, by the way, is apt to become a very bad habit, making people often extremely disagreeable in company, by the contradiction that is necessary to bring it into practice; and thence, besides souring and spoiling the conversation, it is productive of disgusts, and perhaps enmities, with those who may have occasion for friendship. I had caught this by reading my father's books of dispute on religion. Persons of good sense, I have since observed, seldom fall into it, except lawyers, university men, and generally men of all sorts who have been bred at Edinburgh. ¶ A question was once, somehow or other, started between Collins and me on the propriety of educating the female sex in learning, and their abilities for study. He was of the opinion that it was improper, and that they were naturally unequal to it. I took the contrary side, perhaps a little for disputes sake. He was naturally more eloquent, having a greater plenty of words, and sometimes, as I thought, I was vanquished more by his fluency than by the strength of his reasons. ¶ As we parted without settling the point, and were not to see one another again for some time, I sat down to put my arguments in writing, which I copied fair and sent to him. He answered and I replied. Three or four letters on a side had passed, when my father happened to find my papers, and read them. Without entering into the subject in dispute, he took occasion to talk to me about my manner of writing; observed that though I had the advantage of my antagonist in correct spelling and pointing (which he attributed to the printing-house), I fell far short in elegance of expression, method, and in perspicuity, of which he convinced me by several instances. I saw the justice of his remarks, and thence grew more attentive to my manner of writing, and determined to endeavor to improve my style. ¶ About this time I met with an odd volume of the Spectator. I had never before seen any of them. I bought it, read it over and over, and was much delighted with it. I thought the writing excellent, and wished if possible to imitate it. With that view I took some of the papers, and, making short hints of the sentiments in each sentence, laid them by a few days, and then, without looking at the book, tried to complete the papers again, by expressing each hinted sentiment at length, and as fully as it had been expressed before, in any suitable words that should occur to me. Then I compared my Spectator with the original, discovered some of my faults, and corrected them. But I found I wanted a stock of words, or a readiness in collecting and using them, which I thought I should have acquired before that time if I had gone on making verses; since the continual search for words of the same import, but of different length to suit the measure or of different sound for the rhyme, would have laid me under a constant necessity of searching for variety, and also have tended to fix that variety in my mind, and make me master of it. Therefore I took some of the tales in the Spectator and turned them into verse; and after a time, when I had pretty well forgotten the prose, turned them back again. ¶ I also sometimes jumbled my collection of hints into confusion, and after some weeks endeavored to reduce them into the best order before I began to form the full sentences

*Set in 8-point Barnhart Old Style.
Solid*

BENJAMIN FRANKLIN

and complete the subject. This was to teach me method in the arrangement of the thoughts. ¶ By comparing my work with the original, I discovered many faults, and corrected them; but I sometimes had the pleasure to fancy that, in certain particulars of small consequence, I had been fortunate enough to improve the method or the language, and this encouraged me to think that I might in time come to be a tolerable English writer, of which I was extremely ambitious. The time I allotted for writing exercises, and for reading, was at night, or before work began in the morning, or on Sundays, when I contrived to be in the printing-house, avoiding as much as I could the constant attendance at public worship, which my father used to exact of me when I was under his care, and which I still continued to consider a duty, though I could not afford time to practice it. ¶ When about sixteen years of age, I happened to meet with a book, written by one Tyron, recommending a vegetable diet. I determined to go into it. My brother, being yet unmarried, did not keep house, but boarded himself and his apprentices in another family. My refusal to eat flesh occasioned an inconvenience, and I was frequently chid for my singularity. I made myself acquainted with Tyron's manner of preparing some of his dishes, such as boiling potatoes or rice, making hasty pudding and a few others, and then proposed to my brother that, if he would give me weekly half the money he paid for my board, I would board myself. He instantly agreed to it, and I presently found that I could save half what he paid me. ¶ This was an additional fund for buying of books; but I had another advantage in it. My brother and the rest going from the printing-house to their meals, I remained there alone, and despatching presently my light repast (which was often no more than a slice of bread, a handful of raisins, or a tart from the pastry-cook's, and a glass of water), had the rest of the time, till their return, for study; in which I made the greater progress from that greater clearness of head and quicker apprehension which generally attend temperance in eating and drinking. ¶ Now it was that (being on some occa-

Opened with one-point leads.*

BENJAMIN FRANKLIN

sion made ashamed of my ignorance in figures, which I had twice failed learning when at school), I took Cocker's book on Arithmetic, and went through the whole by myself with the greatest ease. I also read Seller's and Shermy's books on Navigation, which made me acquainted with the little geometry they contain; but I never proceeded far in that science. I read about this time Locke On Human Understanding, and The Art of Thinking by Messrs. de Port-Royal. ¶ While I was intent on improving my language, I met with an English grammar (I think it was Greenwood's), having at the end of it two little sketches on the Arts of Rhetoric and Logic, the latter finishing with a dispute in the Socratic method; and soon after I procured Xenophon's Memorial Things of Socrates, wherein there are many examples of the same method. I was charmed with it, adopted it, dropped my abrupt contradictions and positive argumentation, and put on the humble inquirer. And being then from reading Shaftesbury and Collins made a doubter, as I already was in many points of our religious doctrines, I found this method the safest for myself and very embarrassing to those against whom I used it; therefore I took delight in it, practised it continually, and grew very artful and expert in drawing people even of superior knowledge into concessions, the consequences of which they did not foresee, entangling them in difficulties out of which they could not extricate them-

*Set in 12-point Barnhart Old Style.
Opened with one-point leads.*

BENJAMIN FRANKLIN

selves, and so obtaining victories that neither myself nor my cause always deserved. ¶ I continued this method some few years but gradually left it, retaining only the habit of expressing myself in terms of modest diffidence, never using, when I advance any thing that may possibly be disputed, the words certainly, undoubtedly, or any others that give the air of positiveness to an opinion; but rather say, I conceive, or apprehend a thing to be so and so; It appears to me, or I should not think it, so or so, for such and such reasons; or, I imagine it to be so; or It is so if I am not mistaken. ¶ This habit, I believe, has been of great advantage to me when I have had the occasion to inculcate my opinions and persuade men into measures that I have been from time to time engaged in promoting. And as the chief ends of conversation are to inform or to be informed, to please or to persuade, I wish well-meaning and sensible men would not lessen their power of doing good by a positive assuming manner, that seldom fails to disgust, tends to create opposition,

*Set in 14-point Barnhart Old Style.
Opened with one-point leads.*

BENJAMIN FRANKLIN

and to defeat most of the purposes for which speech was given to us. In fact, if you wish to instruct others, a positive dogmatical manner in advancing your sentiments may occasion opposition, and prevent a candid attention. If you desire instruction and improvement from others, you should not at the same time express yourself fixed in your present opinion. Modest and sensible men do not love disputation, will leave you undisturbed in the possession of your errors. In adopting such a manner, you can seldom expect to please your hearers, or obtain the concurrence you desire. ¶ My brother had, in 1720, begun to print a newspaper. It was the second that appeared in America, and was called the New England Courant. The only one before it was the Boston News-Letter. I remember his being dissuaded by some of his friends from the undertaking, as not likely to be a success, one newspaper in their judgment being enough for America. At this time, 1771, there are not less than five-and-twenty.

*Set in 16-point Barnhart Old Style.
Opened with one-point leads.*

BENJAMIN FRANKLIN

He went on, however, with the undertaking. I was employed to carry the papers to the customers, after having worked in composing the types and printing off the sheets. ¶ He had some ingenious men among his friends, who amused themselves by writing little pieces for this paper, which gained it credit, and made it more in demand, and these gentlemen very often visited us. Hearing their conversations, and their accounts of the approbation their papers were received with I was excited to try my hand among them. But, being still a boy, and suspecting that my brother would object to printing anything of mine in his paper, if he knew it to be mine, I contrived to disguise my hand, and, writing an anonymous paper, I put it at night under the door of the printing house. ¶ It was found in the morning, and communicated, to his writing friends

SUPERIOR TYPE

THERE are several things to consider in type quality.

Durability, of course, is very important; but durability is not all. Finish, accuracy, artistic design, correct lining principles, depth of cutting—all must be taken into account. ¶ To be durable, type must be cast from a perfectly proportioned and perfectly blended alloy of copper, antimony, tin and lead—in fact, from Superior Copper-Mixed metal. All our type is cast from this metal, which gives at once the hardest, lightest, toughest, and, as a consequence, the most durable type in the world. ¶ Superior Copper-Mixed type is finished in a very superior manner, and is absolutely guiltless of burrs, rough edges, or any other imperfection that so commonly destroy justification, alignment, and height to paper. It is perfect in size and face. ¶ Any number of Superior Copper-Mixed Types taken at random will not, even in the aggregate, show variations in size, though the test made in a gauge graduated to the hundred-thousandth part of an inch. ¶ Examine our pamphlets, and this specimen book. They tell the tale. Superior Copper-Mixed Type leads all others in artistic design. ¶ Deep cutting means better work and better plates. Deep cut type does not fill up on the press; it saves time and money.

26A 52a 6 Point Elzevir Italic No. 5 1½ lbs., \$2.00

FIRST PROCESSES IN THE PRACTICE OF TYPOGRAPHY
The cutting of punches and making of moulds, demanded a degree of skill in the handling of tools and of experience in the working of metal rarely found in any man who undertook to learn the art of printing. They were never regarded as proper branches of the printer's trade, but were, from the beginning, set aside as kinds of work which could be properly done by the goldsmith only. Jenson, Cennini, Sweinheim and Veldener seem to have been the only printers of the fifteenth century who had the preliminary education

GUTENBERG AND HIS WORK AT MENTZ
Gutenberg's last act upon record in Strasburg was the selling out of the last remnant of his inheritance. The first evidence we have of his return to Mentz is an entry, on the 6th day of October, 1448, in a record of legal contracts, in which he appears as a borrower of money. It seems that Gutenberg had persuaded

SUPERB FACE

OLD STYLE FIFTY-NINE

Is one of the most beautiful of old-styles; or, to put it in the expressive words of a prominent master printer, "It's a daisy face." It is not new; it will never grow old. Its designer certainly understood that gracefulness and simplicity are more lasting than any complex ornamented style which at best only catches the passing fancy. Old Style No. 59 may be used in a multitude of ways. A booklet, for instance, printed from these types on paper similar to that used in this Specimen Book, with a good black and a nice red ink, is really an edition de luxe.

The ORIGIN OF STYLE

Through many well defined avenues of information this store is in immediate touch with the earliest indications of style tendency, so that the first expression and the highest development of the season's modes are almost invariably associated with this unique style center.

6 POINT BORDER NO. 316

HAMLET

Prince of Denmark

By
William Shakespeare

Act 1.—Scene 3.

Pol. Yet here, Laertes! aboard, aboard, for shame!
 The wind sits in the shoulder of your sail,
 And you are stay'd for. There; my blessing with thee!
 And these few precepts in thy memory
 See thou character.* Give thy thoughts no tongue,
 Nor any unproportion'd thought his act. ^{*Engrave}
 Be thou familiar, but by no means vulgar.
 Those friends thou hast, and their adoption tried,
 Grapple them to thy soul with hoops of steel;
 But do not dull thy palm with entertainment
 Of each new-hatch'd, unfledged comrade. Beware
 Of entrance to a quarrel, but being in,
 Bear't that the opposed may beware of thee.
 Give every man thy ear, and few thy voice;
 Take each man's censure,† but reserve thy judgement.
 Costly thy habit as thy purse can buy, ^{†Opinion}
 But not express'd in fancy; rich, not gaudy;
 For the apparel oft proclaims the man,
 And they in France of the best rank and station
 Are of a most select and generous chief in that.

The best and greatest modern exponent of the most profound character in the drama of the world, was Edwin Booth as Hamlet. This faithful portrait, from life, expresses the thoughtful mood and pose of the simulated part, and equally portrays the lofty characteristics of the man.

Nearly every actor of ability has essayed the part of "Hamlet," and there have been many variations of the role. With Mr. Wilson Barrett its melodramatic side is most emphasized, and his skilled knowledge and taste have lent a new interest to a character hitherto traditional, even in its variations. The magnitude of Shakespeare's genius is seen in his adaptability to all times.

The cord of deep emotion which Modjeska's playing invariably strikes is the very key-note of the character of Ophelia.

NEVER before has such beautiful printing been done as is being turned out at the present time. The every-day work of the modern printer excels the choicest products of a few years ago, and when an attempt is made now-a-days to produce

thing extra fine the result is marvelous. A truer and facilities greatly at the printer's disposal in the for this satisfying color are no longer noted on the contrary, designs of genuine artistic excellence, as a rule, that was shown in our late spread trend of modern ideas.

One thing of decided interest of doing the best possible time is Barnhart system, Nothing but the best is needed for the linotype and bodied; if the bodiment both in the matter of time and the improved work. In the matter of rules are to be especially shown.

A Guaranteed Investment

Sound Business

Well managed, with reasonable capital to conduct it, operated under conservative principles presents the most staple and paying form of investment.

During past years success after success has proven with a combination of capital and good business judgment the greatest results are obtained in business life. This is due to the fact that in the consolidation of interests we have more capital, more brains, more push and energy, which are the essential principles of success. These facts are appreciated in the organization of this Company, as it would be impossible to pursue the outlined plans by any individual. An idea of the many opportunities our charter enables us to grasp with their money-making powers is shown on the following pages and will pay you to look them over and investigate.

In One Coach; Several are
Under Wreckage.

Altoona, Pa., May 5th, 3 a. m.—(Special).—The Chicago mail train No. 18, east bound, and the Chicago and St. Louis express No. 21, west bound, collided while running on the Pennsylvania railroad at full speed, eighteen miles from this city, at 11 o'clock to-night.

One coach in which twenty-five persons were travelling was smashed to matchwood. It is feared that every one in this car was either killed or injured.

The first report said three persons were killed and twenty-seven injured. Succeeding reports increased the number of dead to ten

FROM INDIA TO EGYPT.

VOYAGE TO ADEN—ADEN TO SUEZ—THROUGH THE CANAL—PORT SAID.

TRAVELERS who have toured across India sail on the next stage of their voyage from Bombay, by one of the big liners, which run weekly from that city to London via the Suez Canal. The next port of call is Aden, which is reached by a sail of 1,664 miles southwest across the Arabian Sea. Here the 'round the world traveler meets again the vessels of the through service from Australia to England. Tourists who omit the journey through India, and remain with the Australian steamer throughout the voyage, sail directly from Colombo, and after a course of 2,093 miles northwest across the Arabian Sea, past the Island of Socotra and Cape Guardafui, where Arab dhows in the slave trade may be seen cruising at times, reach the same port of Aden. Aden is known as the Indian Gibraltar. With this to guard the entrance to the Red Sea and the other citadel at the Pillars of Hercules to guard the Mediterranean, Great Britain controls all the great interior area of water so far as naval power is concerned. The peninsula of Aden is situated on the southeast coast of Arabia, about ninety miles from the entrance to the Red Sea. Originally it formed part of the Arabian province of Yemen, but for nearly half a century it has been included in British territory, under the governor of Bombay. The peninsula is connected with the Arabian continent on the north side by a narrow neck of land such as Gibraltar is joined to Spanish territory. The whole area of peninsula and harbor is estimated at thirty-five square miles, and the population not less than 20,000, exclusive of the garrison. The military cantonment is the place of greatest interest. There are barracks and mess-houses built of stone and mud for the accommodation of the garrison. The brigadier-general in command has under his direction a force which consists of artillery, British and Indian infantry, native sappers and miners, and a troop of native cavalry, to which camel-mounted Arabs are attached. The place is famously hot, and service on that military station is considered as exile by British officers. A notable feature of the Arabian city is the water supply. In such a climate and a large population it is not to be wondered that great care has been taken to provide a reservoir system. There are about fifty tanks in Aden with an aggregate capacity of nearly 30,000,000 gallons. The date of the original construction of some of these was as early as the year 600 A. D., and many were in fair preservation at the time of the British conquest. Not all have been fully restored, but the supply now is ample. The Red Sea is the scene of more objects of interest and of the romance of history than the casual reader is apt to remember. In the early days of civilization its waters were full of Egyptian and Arabian commerce, and the region is famous in fable as well as history. The narrow entrance to this peculiar body of water is the Strait of Babu'l Mandib, but twelve and a half miles in breadth. Just within the strait is the little island of Perim, volcanic and arid, but occupied by a small detachment of British troops and a cable station. Near by on the Arabian coasts the village of Mocha, which has given its name to a favorite brand of coffee. Two hundred miles north in the Red Sea is the little island of Kamaran, also occupied by the British government and as a cable station. On the Arabian side of this narrow sea are the cities of Yamba and Jiddah, the ports respectively of Medina

*Set in 6-point Paragon.
Opened with one-point leads.*

A TRIP AROUND THE WORLD.

and Mecca, which lie more than one hundred miles inland. On the other side—on the Egyptian and Abyssinian coast, are Annesley Bay, Massowah, the center of Italian influence in Africa—Suakin and Kosair. The Red Sea lighthouses so far are maintained by the government of Egypt, although European keepers are employed. The Turkish government, on the Arabian side, wholly neglects such aids to commerce. Near the northern extremity of the Red Sea are rocky islets which mark the entrance to the Gulf of Suez. All the way through this gulf the water is shallow and lighthouses are numerous. The place where the Israelites crossed is well identified by local tradition. At the same place Napoleon with his generals attempted a crossing on horseback, but was deterred by a sudden change of wind and tide, which swept a great volume of water in breakers over the place. Across these flats a passage had to be dredged for ocean steamers. A few hours more and one reaches the cities of the isthmus. The channel of the Suez Canal, which connects the Mediterranean with the Red Sea, is about one hundred miles in length. It starts from the roadstead of Suez, which has been a seaport at the head of the Red Sea for two centuries. It possesses unique interest as a city of the desert, and as marking the spot where East and West have met in their commerce and travel. The picturesque sailing dhows which lie at its wharves bear cargoes of coffee, spices, gums, senna, rose leaves, and all other drugs and perfumes of Araby. For some reason M. de Lesseps did not bring his canal through the ancient channel and past the old town, but when about five miles off he turned it eastward, avoiding altogether the head of the gulf, through which the direct road would have led. Thus it came to pass that the Suez Canal does not go to Suez at all, but has had formed for it a port of its own, about three miles from the head of the gulf. Some day Port Tewfik may be one of the great maritime and commercial cities of the world, though at present it contains little besides the offices of the canal company and homes of the pilots. The canal has at present an average width of only twenty-five yards, but great improvements are being made in this respect. A deepening is quite as essential as a widening, because of the slow pace required of ships when there is little depth of water under keel. The average rate of speed of vessels passing through the canal is five miles an hour in the excavated channels. Of course they travel at full speed in the open lakes, so that the entire journey from Suez to Port Said is made in about twelve hours. Ships are piloted on the block system, well known in railway operation. Parts of the Suez canal have been cut through sandstone, while at other places it runs through clay and sand hills. In its course several lakes are passed. This is the same channel that was followed by the ship canal built by the Egyptian monarch Necho, 600 B. C., from Suez to the Nile. This cutting became choked with sand, but was afterward cleared and reopened by Caliph Omar, in the seventh century. The town of Ismailia is situated on Lake Timsah, the half-way point in the canal. It clusters around a summer palace of the Khedive, and was the center of the celebrations at the opening of the canal in November, 1869. Again in 1882 it was the base of Lord Wolseley's campaign against Cairo and Alexandria. Port Said, the northern entrance to the canal and the Mediterranean port, owes its existence altogether to the canal and its commerce. It is built on

A TRIP AROUND THE WORLD.

reclaimed sands between the sea and Lake Menzaleh, and lies so low that it seems sometimes as if the sea would overwhelm it. It is not a picturesque place, and except for the canal has little interest. Lake Menzaleh is separated from the sea by a succession of sand beaches, which extend all along the delta of the Nile and far eastward almost to the coast of Palestine. Formerly Lake Menzaleh was a part of the delta, but the sea has claimed it, and it is now a vast, half-marshy lagoon dotted with islets, the fishing ground of Arabs, and the home of millions of waterfowl.

THE LAND OF PHARAOHS.

In all the world, no country has seen more change in methods and safety of travel in the last few years than has Egypt. Experts in the organization of comfort for tourists have expended their best energies in devising ways by which access can be had to the sights of greatest interest at the least cost of time and trouble. There was a day not long ago when a visit to Cairo, Alexandria, the Pyramids, and the Sphinx was the limit of possibility for the most daring traveler, and then great expenditure of money and labor was involved. Now it is but the beginning of a journey in Egypt. The cataracts of the Nile may be reached by steamers which afford every luxury of stateroom and table. Ancient Thebes and Luxor are way-stations on the voyage. The pilgrim who remembers Gordon's brave fight and death may, thanks to Lord Kitchener's brilliant re-conquest of the Soudan region, extend his tour to Khartoum and the upper Soudan without great difficulty, and it will not be long until the lakes of Central Africa and the head waters of the Nile, the scenes of infinite labor and bravery on the part of Speke and Baker and Livingston and Stanley, may be included in the itinerary of a personally conducted excursion, with a coupon ticket as the guarantee of practicability. Though Cairo is only about sixty miles in a direct line from Suez, the railway makes the journey more than double that distance. It follows the west bank of the canal to Ismailia, then turns directly westward along the bank of the fresh-water canal into the delta of the Nile. The line passes through a country which was the scene of much of the fighting between British troops and those of Arabi Pasha in 1882. This same fertile region, the delta, was the scene of the most of the labors of Joseph in the time of the Pharaohs, and it was from here, with the Exodus, that the captivity of the Jews ended and their wanderings in the desert of Sinai began. The soil of the delta is perhaps the most fertile in the world. It is always supplied with water by innumerable canals, annually filled when the Nile is high, and

*Set in 8-point Paragon.

A TRIP AROUND THE WORLD.

gradually diminishing till the inundation recommences in June. As the water subsides, the character of the crops is varied, but three distinct harvests commonly are taken off the same ground each year if it is artificially watered. This is effected for the most part by the primitive methods of antiquity, although steam pumps and windmills are becoming more common. The Nile and its inundation are objects of constant interest and solicitude. A low Nile means something like starvation for thousands. The cause of the inundation is the heavy rains of Central Africa. The Nile receives no tributaries for the last 1,800 miles of its course, but is constantly feeding canals and reservoirs, so that by the time it arrives at the delta very little of the original volume remains. There are plenty of hotels in Cairo, so that one may choose as he likes as to degrees of fashion and expense. The city is another of those whose characteristic it has been of recent years to be the meeting place for East and West. It is a favorite resort for European travelers during the cold months of their own northern cities. The mixture of occidental and oriental types and costumes helps to make street scenes picturesque, and the city is unlike any other in the world. The new town is modern, with wide streets and many trees, but it is the old town, with its narrow, winding lanes, sometimes roofed over, and its red and white mosques, that affords the greatest pleasure to the stranger. Within the reach of daily excursions from Cairo are the Pyramids of Gizeh, the Sphinx, and the ruins of Memphis. The pyramids are but seven miles from Cairo, across the Nile, which one passes by a fine iron bridge. Altogether there are about sixty of these gigantic sepulchers in Egypt, of which those at Gizeh are the nearest to Cairo and the largest. The nearest, which, though not now the highest, is always called the great pyramid, is that of Cheops. In addition to the pyramids and Sphinx, an immense number of tombs

*Set in 10-Point Paragon.
Opened with one-point leads.*

A TRIP AROUND THE WORLD.

may be visited in the same part of the cemetery of Memphis. This excursion from Gairo may be made comfortably in a carriage, without fatigue or inconvenience. The Boolak Museum of Gairo, the streets of the native city, the mosques and citadel, the bazaars for the sale of Egyptian and Turkish work in gold and silver, sweetmeats, embroidery, rugs and other wares, will easily provide entertainment for a fortnight in Gairo, and the perfection of the climate, except in the height of summer, justifies a leisurely stay at this Egyptian capital. Sufficient variety of choice is offered to the traveler who wishes to go up the Nile, to gratify almost any demand. If there be sufficient time at disposal, the best way to see the wonders of Egypt is to take a sailing boat or dahabeeah. The voyage to the second cataract occupies about three months, is very pleasant, very healthful, and, considering what one gets out of it, very cheap. Tourist steamers offer an alternative method by which one may visit the Nile as far as Assuan and back, including the first cataract, in twenty days. Another plan is to go by rail as far as Siout, where the railway terminates, about two hundred and fifty miles above Gairo, and thence by the postal steamers, which run twice a week and permit a visit to some of the principal objects of interest. The tourist steamer journey up the Nile provides for sufficient time with donkeys and guides to visit each of the points of interest reached on the journey. Among these are the site of ancient Memphis, with some neighboring pyramids; Maghagga, with its sugar

A TRIP AROUND THE WORLD.

manufactories; the tombs and grottoes near Beni-Hassan, with fine examples of the Doric and lotus columns; the town of Siout, the terminus of the railway; the ruins of the temple of Abydos; the tombs of the kings Rameses near Thebes; the ruins of Karnak; the temple and town of Luxor, and finally the cataract, and the rapids near Assuan. Above the first cataract, comfortable steamers connect with the voyage just outlined throughout the tourist season, making the journey to the second cataract and return in seven days. From this point connecting service can be availed of to Khartoum.

THE HOLY LAND.

With remarkably small expense and little difficulty the traveler 'round the world may next visit Palestine and thus diverge from his direct course. For this part of the journey a method of travel is employed altogether different from anything which he meets in his entire experience, and peculiarly appropriate to the country. The primitive modes of

*Set in 14-point Paragon.

AROUND THE WORLD.

life and curious method of travel that have survived in the land of Canaan from the days of the patriarchs have been utilized and adopted to tourist travel in such a way as to multiply the pleasure of the experience and enable every feature of it to appeal strongly to the imagination and excite the interest of all. The charm and beauty of the climate and scenery of Palestine the associations of its hills and valleys and cities with the stories of the Old Testament, the events of the New Testament, and the wars of the Crusades, are some of the attractions acknowledged by people of every nationality. The journey through Palestine is a camping tour, provided with

BACK TO AMERICA

THE BRITISH ISLES AND TRANSATLANTIC ROUTE.

IF ONE were touring the world "in eighty days," it would be necessary to sail from England without delay, but except for some imperative demand, the foreign traveler around the world will hardly quit that country without a glimpse of its attractions. So intimately are the United States and Great Britain bound together by commercial and blood relationships, and so directly do they trace the beginnings of their national greatness to the same sources, that it becomes a primary necessity for every American who wishes to understand well his own country and its history to acquaint himself with the British Isles. In a volume of this size it would be superfluous to attempt even a sketch review of the things to be seen in the United Kingdom. London alone is inexhaustible. One might devote himself to the literature, the art, the commerce, the history, which have centered there, and in either subject find material for endless interest. Only to name the Tower, St. Paul's, Westminster Abbey, and the National Gallery is enough to establish the truth of this assertion. There is hardly a mile of English and Scottish soil that does not contain a memory of something worth visiting. Stratford-on-Avon, the lake district, the home of Scott, the abbeys, the castles, all offer material for the traveler, whatever his tastes may be, out of which he may select what is most pleasing to him. Equally romantic and enchanting is the scenery of Ireland, the ports of which are the last to be seen by the trans-Atlantic traveler. From the British Isles the round the world tourist may choose any one of the dozen ocean steamship lines sailing from Southampton, Liverpool, London, Glasgow, Londonderry, or Queenstown. If, instead, he selects one of the continental cities as a port of debarkation, Hamburg, Bremen, Antwerp, Havre, or Cherbourg are at his disposal. German, French, English, and American lines are open to choice of the traveler who patronizes the American and Australian Line in the purchase of his ticket. If he has a favorite port, a favorite steamer, or a favorite captain, any one is at his disposal. Then after a voyage across the North Atlantic by the most commodious, most luxurious, safest, and fastest steamers in the world, he may land again on American soil at any one of the Atlantic coast cities, from which there is prompt, rapid and luxurious service back to the point of starting. This voyage across the North Atlantic Ocean, which leads to an American port, the railways of the United States, and home, is a very different thing from the voyages in the tropics and in the Pacific and Indian Oceans, which have been passed earlier in this "round the world" journey. On these big Atlantic liners the number of passengers is many times as great as on the steamers which ply on the longer routes. Scores of travelers cross the Atlantic to every one who visits the Orient, which after all is one thing which helps to make the long journey to the Far East more attractive because less hackneyed. Nevertheless, the "Atlantic Ferry" has its very definite and distinct attractions not ever forgotten by one who has made the voyage. The astonishing perfection of the arrangements made for the comfort of travelers, the great size of the vessels in the service, the richness of their appointments, the variety of sports, and the wide sweep of the decks available for them, all help to make the voyage a pleasure. With a passenger list including hundreds of travelers, and a voyage lasting one week instead of several, the social life on board is more apt to take the form of acquaintance with congenial cabin, deck, and table neighbors than with the whole of the company, as is usually the case on the Pacific Ocean. This is none the less a pleasure of the voyage. Then, on the last night before making port, it is usual that a concert is given by the passengers. Inasmuch as it

*Set in 6-point Mission.

A TRIP AROUND THE WORLD.

is seldom that the number does not include authors, artists, musicians, and actors of eminence traveling between Europe and America, such events are likely to be of peculiar interest, and the last memory of the journey before reaching home a pleasant one.

FROM AUSTRALIA TO THE ORIENT.

The waters of the Pacific and Indian Oceans, north and west of Australia, are traversed by scores of great steamships of modern construction under the British flag, which provide frequent and rapid communication between the ports of Australia, the East Indies, and the Asiatic continent, as well as with the home ports of Europe. These lines are operated under the flag of the British India Steam Navigation Company, The Queensland Royal Mail, and the Australasian United Steam Navigation Company. The fleets in this service are enormous and their volume of traffic correspondingly large. It is true that they do not carry the larger volume of passenger traffic between Europe and Australia, most of this business going by way of the southern Australian ports, instead of the northern. As has been related in previous pages, such lines as the Peninsular and Oriental, the Orient, the North German Lloyd, and the Messageries Maritimes afford a luxurious and swift service between London and Sydney, via Melbourne, Adelaide, Albany, Colombo, Aden, and Suez. But there is another series of attractions to the north of Australia, reached by equally comfortable methods of travel, and altogether novel. The sailing port for these steamers is Brisbane, the capital of Queensland. From this city lines start whose other terminals include all the commercial ports from Yokohama to Aden, as well as the through service to London. It is quite worth while to consider these less frequented lines of travel in planning a journey 'round the world. From Brisbane to the northernmost extremity of the Australian continent at Cape York is a distance of nearly 2,000 miles. On the way there are many interesting ports of call, including Rockhampton, Townsville, and Cooktown. These and the half-dozen others which break the journey for a few hours are by no means uninteresting to the traveler beginning the long ocean voyage. Some of them are outlets for large gold-mining industries in the interior of the colony. Others are agricultural markets for wheat, mutton, wool, and sugar cane. The northward journey takes one farther and farther into the tropics, and at the first port beyond the Australian continent one enters the waters of Torres Strait, notable for the savagery of the natives discovered on the shores which bound it. Thursday Island is the port right in the strait, York Cape a few miles to the southward, and the mountains of New Guinea are in sight to the north. New Guinea has been subdivided of late years by those colonial promoters of the East Indies, the British, Germans, and Dutch, each of whom has taken a segment for development. Nevertheless this largest of all islands is still to a great extent unexplored, and the natives in the remoter parts are as dangerous as they were in the days of the first explorers. The recent unprofitable rush of gold seekers into the island from Australia brings the last mentioned fact forcibly to mind. Thursday Island is the center of pearl-shell fisheries of great value. It is recognized as an important strategic point, and has been fortified

*Set in 8-point Mission.
Solid.*

A TRIP AROUND THE WORLD.

strongly by the British imperial authorities, who quarter a permanent military force there. From Thursday Island the steamers of the British India Company sail almost directly westward for more than two thousand miles, through the Arafura, Banda, Flores, and Java seas, coasting the Dutch Spice Islands all the way to Batavia, the capital of the Dutch East Indies and the metropolis of the Archipelago. The voyage is a tropical one, but the steamers are built for this service and provide accommodations adapted to the climate. At Batavia the lines of this company diverge, some vessels sailing directly to Aden, and reaching Plymouth as a home port, by way of the Red Sea, the Suez Canal, the Mediterranean, and Gibraltar. Others sail northwestward to Singapore, coasting the eastern shores of Sumatra, through the Straits of Malacca, and into the Bay of Bengal, touching at the ports of the Malay Peninsula, and finding their terminus at Rangoon, Calcutta, or Madras. By the vessels of this same great company one may visit Kurrachee, Muscat, Bushire, and the other ports of the Persian Gulf, even reaching Bagdad without difficulty. Another service maintained by the same company reaches all the ports of the east coast of Africa from Delagoa Bay northward to Mozambique, Zanzibar, and thence to Bombay. Still another service extends from Bombay and Colombo to the island of Mauritius the scene of the tale of "Paul and Virginia." As for the ports of India and British Burmah, either on the Arabian Sea or the Bay of Bengal, they are brought as easily within reach by the frequent service of splendid steamers as are the Atlantic coast cities of the United States. Those countries of Europe which maintain colonies in the Pacific Ocean find it desirable to subsidize transportation lines, in order to provide satisfactory means of communication to these remote settlements. Passenger and freight traffic alone might support occasional steamers, but could not be depended upon to do so. The expenditure made by these governments, therefore, comes to the assistance of every individual tourist, and the traveler who visits these seas will find awaiting him commodious, safe and

*Set in 10-point Mission.

A TRIP AROUND THE WORLD.

fast steamers sailing on regular schedules to islands that are but names to most dwellers in the northern hemisphere. In the pages devoted to New Zealand something has been said concerning the facilities for travel to Samoa, Tonga, Tahiti, and the more easterly islands of the South Pacific. From the Australian ports another service is maintained to New Caledonia, the French colony of the West Pacific, the New Hebrides, Norfolk Island, and the Fiji Islands. These steamers sail in the service either of the Australasian United Steam Navigation Company or the Messageries Maritimes from Sydney, vessels passing each way every two weeks. Noumea, the capital of New Caledonia, is a very pleasant city, its French atmosphere making it altogether different from any other of the Pacific islands. It possesses a fine harbor, stone wharves, wide streets with shade trees, excellent public buildings, and a botanical garden. New Caledonia is a penal colony of France and an excellent convict band of forty performers furnishes music in the public square. The town is well lighted, provided with good hotels, and the drives in the vicinity are exceedingly interesting. The chief industries are the mining of chrome and nickel and the raising of coffee. Steamers leave Noumea for a circuit of the island every week. They are new and comfortable, lighted by electricity, and the service is entirely satisfactory. The trip around the island consumes eight days, every moment of the time offering fresh views of novel scenery. The entire voyage is inside the reef, in smooth water, and the

*Set in 12-point Mission.

A TRIP AROUND THE WORLD

vessel anchors every night. From the ports of Australia to those of the extreme Orient there are three steamship companies performing regular service, and their schedules are arranged alternately, so the passenger may be sure of a direct sailing once a week. Two of these lines, the China Navigation Company and the Eastern and Australian Steamship Company, are English corporations, the steamers a product of English shipyards, and officered by Englishmen. The third line, the Nippon Yusen Kaisha, or Japan Mail Line, is one part of that great service maintained in the Orient by the Japanese, whose steamers now ply between most ports of the Pacific. They too are English built and officered by Englishmen, although line and steamers have Japanese names. All of the vessels in these services are large enough to be entirely comfortable, and offer a very attractive journey to the passenger who visits Asia by this route. They sail from Sydney northward to Brisbane, at either of which ports passengers may join the vessel. All the principal ports of Queensland are visited in turn. From

A TRIP AROUND THE WORLD

Thursday Island the track follows directly across the entrance to the Gulf of Carpentaria and around the northern coast of Australia to Port Darwin, which is the landing place of the submarine cable connecting these colonies with Europe by way of Java, Sumatra, and Singapore. Here too the transcontinental telegraph begins its southern journey across the Australian desert to Adelaide. From Port Darwin to Hongkong the track chart shows a very direct line of sailing, past the islands of Timor, the Moluccas, Celebes, Mindanao, and Luzon, into the China Sea. Under Spanish dominion the Philippine Islands were not favored by either trade or travel, consequently steamers did not choose to call at Manila, although that capital was almost within sight of the

HISTORICAL SKETCH OF THE PRINTING PRESS.

THE invention of the printing press must have followed the making of movable types. Nothing absolutely certain is known of the time at which either was first introduced. As the invention of type lies somewhere between the years 1438 and 1450, it may be assumed that this period also produced the first printing press, all the important features of which are still preserved in the modern hand press. As printing from blocks had been practised for many years previously, the method of taking such impressions now uncertain, it is possible that the first press for printing type may have derived some or all of its characteristics from that used for printing blocks. ¶Gutenberg's printing press consisted of two upright timbers, with cross pieces of wood to stay them together at the top and bottom, and two intermediate cross-timbers. On one of these the type was supported, and through the other a wooden screw passed, its lower point resting on the center of a wooden platen, which was thus screwed down upon the type after it had been inked and the paper spread over it. This simple form continued in use for 150 years, or until the early part of the seventeenth century, without any material change. The forms of type were placed upon wood or stone beds, incased in frames called coffins, moved in and out laboriously by hand, and after each impression the platen had to be screwed up with the bar so that the printed sheet might be removed and hung up to dry. ¶The first recorded improvements to this press were made by William Jenson Blaeuw, of Amsterdam, about 1620. Blaeuw's press was introduced into England, and used there as well as upon the continent, being substantially the same as that used by Benjamin Franklin in London in 1725. ¶Little further improvement was made before 1798, when the Earl of Stanhope had a press built, the frame of which was one piece of cast iron. A necessity had arisen for greater power in giving impression, especially in the printing of wood-cuts, and the tendency was naturally toward larger forms of type, requiring greater exertion on part of the printer. The screw was retained with the addition of a combination of levers to assist in gaining greater power with less expenditure of energy. ¶The next practical improvement was by George Clymer, of Philadelphia, who, about 1816, devised an iron machine entirely dispensing with the screw. Clymer took his invention to England where it became known as the Columbian press. In England Ruthven, Brown and others made iron hand presses, all improving on the Stanhope. In 1822 Peter Smith devised a machine with cast iron frame, in which a toggle-joint, at once simple and effective, took the place of the screw with levers. ¶In 1827 Samuel Rust, of New York, worked out a great improvement on the Smith press. This patent was purchased by R. Hoe & Co. who improved upon it. The new invention was known as the Washington press, and in principle and construction has never been surpassed by any hand printing machine. ¶The bed-and-platen system of printing was up to the middle of the nineteenth century the favorite method for fine books and illustrations, and still has a limited use. The first power or steam press upon this principle was made by Dr. Daniel Treadwell of Boston in 1822. The frames were of wood, but only a few were constructed. The best press of this description is that devised and patented by Issac Adams, of Boston in 1830 and 1836, and by Otis Tufts, of the same place, in 1834. This was first made with a wooden and afterward with an iron frame. In 1858 Adams' business became the property of Hoe & Co., who improved the machine. ¶The method of printing from forms carried upon flat beds backward and forward beneath a cylinder had been rudely employed by printers of copperplate engravings in the fifteenth century. With the introduction of this system began an entirely new era in the history of the printing press. The credit of actually introducing into use a flat-bed cylinder press is due to a Saxon named Friederich Koenig, who, in England, in 1806, through the aid of Thomas Bensley, a printer in London, devised a machine which was used in 1812-13. Koenig was assisted also by a mechanic named Andrew Bauer, a fellow countryman. ¶He also devised what has proved even to this day to be the best mechanism for producing reciprocating motion of the type bed. ¶In 1814 Koenig patented a continuously revolving cylinder press. He also showed designs adapting it for use as a single cylinder, and also as a two-cylinder press, both for printing on one side of the paper at a time, likewise a two-cylinder press for printing both sides at one operation. In the same year he erected two two-cylinder presses for the London Times that printed one side at the rate of 800 sheets per hour. Bacon, Donkin, Cowper and Applegath also patented improvements about the same time. ¶The most ingenious and practical device improving the flat-bed and cylinder press was patented by Napier in 1829 and 1830. He first introduced grippers for conveying the sheets around the cylinder during impression, and for delivering them after printing. Tapes had been previously used. He was the first to construct presses in which the cylinders are of small size and make two or more revolutions to each impression, lifting the cylinder by toggles. ¶About 1832 Robert Hoe made the first cylinder press ever used in the United States. This was of the single large cylinder pattern, making one revolution for each impression, and never stopping. The stop-cylinder was devised and patented by a Frenchman named Dutartre in 1852, and was later introduced into the United States and improved in many respects. ¶Up to 1847 American newspapers were printed upon single small cylinder or two cylinder machines at 2000 to 4000 an hour. Then came in the Hoe type-revolving machine, where a central cylinder held the type pages upon its surface, and grouped about it were from four to ten impression cylinders as the case required. Each cylinder required a feeder, usually a boy, who was required to handle 2000 sheets an hour. Later type forms gave place to curved plates on these machines. In 1865 William Bullock constructed the first machine to print from a continuous web of paper. It consisted of two form or plate cylinders and two impression cylinders, the second impression cylinder being of large size to provide additional tympan surface to lessen the offset from the first printed side of the paper. In 1868 the London Times set up the first rotary perfecting press, similar to the Bullock, except that the cylinders were of the same size and placed one above the other. In 1871 R. Hoe and Co. turned their attention to the rotary perfecting press, and built machines containing many improvements, with little limit to their capacity for printing except the ability of the paper web to stand the strain of passing through the press. Then was developed the Hoe double supplement press, the first of which was used by the New York Herald, and for the third time completely revolutionizing newspaper printing. A later time (1887) witnessed the installation in the New York World of the first quadruple newspaper press, and in 1890 the Herald installed a sextuple press. Since then various changes and improvements by several makers principally Hoe, Goss and Scott, have added greatly to the speed and perfection of machines for newspaper printing.

THE OPTIMUS TWO-REVOLUTION; ITS SIMPLE BED MOTION.

OR fifty years or more printing press builders have striven to attain perfection in the bed motion. In recent years the demand for greater speed but stimulated their exertions. Only through improvement could speed be reached. Individual effort along different lines has produced motions more or less commendable in the most vital and most important movement of a printing press. In this, as in every line of invention, there is only one really good way out—only one way that, because of high efficiency and perfection, can be said to be the very best and superior to all else for the purpose. This pre-eminence in driving motions we embody in the Optimus. ¶ All the desirable modern bed motions consist of some adaptation of a shifting or a movable gear which, in each of two positions, engages a rack attached to the type bed. Experience indicates that a three-to-one gear is the best for speed; that is, a gear which makes three revolutions to each impression. A number of presses in common use have a three-to-one bed gear. If this were all, there would be no choice in these mechanisms. But all of these three-to-one bed motions, with the exception of the Babcock, are made up of a complexity of motions. The gear is thrown back and forth or up and down, and the shoes moved in and out, at each end of the rack at each stroke of the bed by separate and independent mechanisms more or less complex, all of which are expected to work in unison. The builders of these bed motions, taking as a model an early and intricate mechanism, have been forced to ignore simplicity. ¶ The most efficient device for any purpose is that which gives desired results with fewest parts and least motions. Simplicity is the first characteristic of the Babcock patented ball and socket bed motion. It is not made up of different mechanisms receiving motion from different sources. It has few parts, less than any other. It is a perfect motion, practically indestructible by wear, and eliminates the faults others contain. It is only a shaft with the driving pulley on one end and the star gear on the other. On this shaft is the series of balls and sockets so placed that one part of the shaft is deflectable, giving a reciprocating as well as a rotary motion to the gear. This permits the star gear to engage the single rack from above at one movement of the bed and from below at the next, and secures the advantage of driving in both directions from the same point. This patented device is the only one imparting motion with absolute uniformity regardless of the angle of transmission. The mechanism is so strong, so perfect in construction, that it will endure many times the strain that any work can give. During the years of its use no amount of hard running or actual abuse has impaired in the least its efficiency or its perfection of operation. ¶ The ball and socket principle is carried further, and becomes the source of greatest advantage in our patented bed driving gear and rack. It is of the greatest possible efficiency at the points of reverse of the bed. Each end of the rack is fitted with a large hardened steel ball adjusted on a large steel stud, which engages the star gear. The space or socket in the gear which engages these balls is absolutely spherical, giving perfect contact between the gear and the ends of the rack, and furnishing large and durable wearing surfaces. ¶ The shaft which carries the bed gear is of very large proportions, being actually many times as strong as was considered necessary in well built machines a few years ago. The whole mechanism is so accurately balanced and nicely constructed as to admit of the highest speed without jar or vibration. ¶ The rack is located not in the center of the bed, but in the center of the load. The inking rollers, geared direct to one side of the bed, require a large amount of power to drive. The rack is placed at the proper point between the middle of the bed and the end which drives the rollers to insure its being in the center of resistance. All other bed drives move the bed in one direction with a rack close up under the bed, and in the other with a rack near the base of the machine, a bad application of power which makes impossible the use of a strong center-girt under impression. In the Babcock bed motion, however, there is but one rack, and this is sufficiently high to permit the use of a cross-girt of great strength. ¶ One of the serious objections to other bed driving devices is that the shoes are movable and long. The roll on the bed gear which engages these shoes and stops and starts the bed, travels a long distance quickly, and frequently under high pressure, touching the shoe at a point only. The result is worn roll and shoes, which "pound" at the points of reverse, reducing the speed and injuring the whole machine. The Babcock shoes for reversing the bed are small and curved to fit the star gear roll. They are not thrown in and out of action, but bolted solidly in position, and produce little motion in the roll. They run years without needing adjustment. ¶ A common device for overcoming the irregularities of a poor bed motion is a long rack and segment for gearing bed and cylinder together during impression. This arrangement is positive evidence of a faulty bed motion, and is never entirely satisfactory. On Babcock presses a short rack and segment are used just before the impression, and the perfect bed motion does the rest in a manner beyond criticism. ¶ The secret of the success of the whole

*8 Point Old Roman Condensed

THE OPTIMUS TWO-REVOLUTION.

Babcock Optimus patented bed motion is in the proper adaptation of the ball and socket mechanism, a unique feature in a bed motion. The Babcock Company has invented special machinery for making the shoes and for making perfect balls and perfect sockets, and the result is an absolutely perfect bed motion, the acme of simplicity and durability, and unequalled speed. It is the only one unchanged and unchanging. Some other bed drives greatly boasted a year or so ago, are now entirely abandoned, while today the most vaunted are not as they were some months since. That of the Optimus has not given trouble nor cost anyone one cent. It gives easily a press of highest speed, greatest steadiness and smoothness in operation, and absolute register. The extreme and unusual uniformity of action of the driving motion of the Optimus makes the attaching of automatic feeders to this press exceedingly easy and satisfactory, and insures the best possible performance from these delicately adjusted machines. It gives, also, long wear to forms. On a No. 11 (45x63) Optimus a run of 800,000 was recently made from one set of plates, "and the plates do not look as if they had been used",—a performance impossible on any other press.

STRENGTH AND DELICACY OF IMPRESSION.

Strength, pure and simple, is a matter of construction. If omitted by the builder the pressman cannot supply it. It does not depend upon mere weight. The metal must be properly placed. In some presses the peculiarities of the driving motions do not admit of the use of a sufficiently massive center-girt to withstand the strains of impression, which often are great. The line of contact between cylinder and form in a press of average size is one-half inch wide. The pressure required for fine work on heavy forms is about six hundred pounds per square inch. On a forty-inch form the total pressure is nearly twelve thousand pounds, or six tons. Whether a press is well designed to withstand the intermittent blows of strong impression is best told by the absence of "guttering," which is caused by the springing of the metal when press is on and off impression. To gutter is to be weak. It is the evidence of a lack of rigidity. ¶The Optimus does not gutter. In this respect it stands alone, and is, under impression, the most rigid of presses. Just why this is so is due to the original, simple and effective means adopted to meet the conditions. ¶We show a view of that portion of an Optimus press immediately under the impression line. It displays the massive center-girt used in all Optimus presses, and also the extreme simplicity of the driving motion, to which we have before referred. This center-girt supports six tracks which in turn support the bed. In addition to the heaviest girt, the Optimus possesses the heaviest side frames in use, and upon these the girt is supported by heavy flanges so that the strain of impression is not imposed upon the bolts which unite girt and frames. At this point the frames are solid, and in no way are they weakened by being cut away for rods, springs, toggles, or other complexities for raising the cylinder. Not only does the girt contain a great weight of metal, but its form is such as to greatly add to its power of resistance. It is not weakened by being cut away to admit the passage of a bed rack that hangs too low. It is not merely a tie between the side frames, but a massive, unyielding support for impression. ¶The pressure required today to print a high-class cut form would have been impossible in the strongest press built a few years ago. It is a comparatively

*10 Point Old Roman Condensed
opened with one-point leads*

simple problem to make the cylinder sufficiently strong, though it is one not yet solved by everybody. The problem of the bed support is quite a different proposition, principally because the stopping and starting of a needlessly heavy bed produces shock and strain to the press and foundations, consumes power and limits speed, and speed is one of the prime factors in a modern press. ¶ The first presses had two tracks. One of the early devices for increasing the bed support was a single wheel under the center of impression. Then two independent wheels made two runners between the tracks. These proved difficult of adjustment, and unequal to the strain. Then two or three smaller wheels in clusters were tried, making a short wheel track, resulting in increased strength, but still lacking in accuracy of adjustment, and this lack was fatal to best printing. Later a builder put four full-length roller tracks under the bed, abandoning a better arrangement because of his inability to devise a way to accurately adjust the wheels, which, with several in each track, must all have their upper surfaces exactly in line and touch the tracks under the bed with equal precision. With an exception or two the four-track practice became general. ¶ Four long roller tracks cannot be adjusted accurately to compensate for wear, which is greatest on the inside tracks. A common expedient to correct wear in these is to "wedge up" between the center girt and the tracks; but here is met the same trouble as with the wheels—the impossibility of wedging accurately. Rebuilding at the factory is the only remedy. ¶ We have always contended that four non-adjustable tracks were a poor arrangement, and that four tracks of any kind were insufficient for medium and large-sized beds. A support under each end is as necessary as at any point. The first effect of taking impression is strain between bed and cylinder. This strain must be maintained until the form is printed. The only possible way to accomplish this is by firm contact between the bearers on ends of cylinder and the bearers on ends of bed. Otherwise every time the cylinder passes a margin it will drop into it to be picked up again by the opposite edge of the form, working ruin in the wake of its guttering weakness. ¶ Tests proved that a wheel five or six inches in diameter was more durable under a press bed than a roller track the same length as the diameter of the wheel; and that a short track of two or three wheels was more durable and retained adjustment longer than a roller track of whatever length, each wheel having three times the wearing surface of a straight track as long as its diameter. Three wheels each five inches in diameter, are equivalent to a track about four feet (forty-seven inches) in length. As it is impossible to concentrate four feet of straight roller track under the point of impression, and entirely feasible to concentrate a track of wheels

12 Point Old Roman Condensed
set solid

with four feet of track surface on their circumferences, it is easy to understand why a wheel track of three wheels is more durable than any other arrangement. The ordinary long roller or guide tracks are needed to direct and maintain the bed in position; but wheel tracks made of several wheels each are the perfect support for sustaining impression. The original users of wheel tracks, and other builders, have always conceded the desirability of wheels; but because of failure to adjust them accurately they were abandoned for a mechanism even less adjustable. The use of the four long roller tracks is advocated by saying that they will wear, and therefore will not need adjusting—a statement that the experience of printers will not substantiate. When, four or five years ago, a prominent press that had been for years made as a two-track machine was changed to four, its makers said that they knew the last was not as good construction as the old; but they intended to take advantage of the fallacy of the printer concerning four tracks, and would furnish an inferior machine in order to sell more. ¶ Satisfying ourselves beyond all doubt that wheel tracks adjustable for unevenness of wear are vastly more desirable than the non-adjustable roller tracks, we invented a way to readily adjust them to mathematical accuracy, and made positively practical the use of this unequalled means of bed support. ¶ The result of this study is that for several years Optimus presses have been equipped with patented semi-automatic adjustable wheel tracks, three wheels in a track, and four of these tracks, beside the two long guide tracks, six in all, to each medium or large-sized press. Each of these wheels can be adjusted in a few seconds so that it bears against the bed uniformly with all the others without special care on the part of the operator. This adjustability does not exist in any other press, while the two Optimus roller tracks themselves have twice the durability of the ordinary style. The two new patented roller

*14 Point Old Roman Condensed
set solid*

tracks, combined with the four wheel tracks, all sustained by the most massive center-girt in use, make a six-track bed support never before equalled in durability and power of resistance to impressional strains. ¶ The strength supporting the bed is met above by a heavy and thoroughly well braced and accurately balanced cylinder, supplied with a steel shaft as large and nearly twice as strong as the cast iron shafts others use. This shaft runs in unusually large and long steel boxes, with close connections between cylinder and bearings, offering a rigidity equal to that of the bed supports. The boxes, or bearings, are themselves a part of the heavy side frames, solidly bolted to them. The upward thrust of impression is, therefore, sustained by the cylinder shaft held in immovable boxes. In other words, the cylinder is held to form by the side frames, contrary to the practice in all other presses, wherein the boxes are loose in the side frames, and slip up and down as the cylinder rises and falls at each impression. The Optimus cylinder is adjusted for impression by means of a very heavy screw so fitted into the box that all strain is taken upon its head, and this screw is capable of resisting fifty times the strain that it will ever be called upon to endure. The raising or lowering of the cylinder never throws it out of line with the bed. Whether cylinder is high or low, its relation to bed and tracks is always true.

*16 Point Old Roman Condensed
set solid*

A word about the bearings in which the cylinder shaft runs. A pipe box is one that is made out of a solid piece of metal. It has no cap, and cannot be taken apart. The bearings in such boxes are not true, and one end is larger than the other. The inside cannot be scraped thoroughly, or very well in fact, to work off the high spots. All that can be done is to make them as good as can be, and fit them so they will slide on the shaft, which, of course, touches only the high places. When the high spots are gone through wear the shaft is loose, and a very bad condition exists. ¶ A split box is one that is in two pieces, has a cap, and can be taken apart. This is the one that is used in the Optimus. With the two parts securely fastened together these boxes are bored and reamed with two reamers, with the greatest care. Taken apart the interiors are easily accessible to the workman, who scrapes them until a perfect bearing throughout is secured. The shaft lies within them touching in every part, and has a full and complete bearing throughout its entire surface, giving slow wear and a perfect fit. After years of use, when wear is appreciable, the split box affords a ready take-up.

THE OPTIMUS TWO-REVOLUTION, CONTINUED.

ONLY in the certainty of great strength can evenness and delicacy of impression exist. Particularly does weakness make waste of time and effort. Only through rigidity is a press fast under make-ready—fast while standing still. On the Optimus a tissue overlay counts for all that it is worth, and the pressman's efforts are quickly fruitful in the expected results. There is no lifting around overlays where the last has borne off the impression from all around, and patch after patch is needed to bring it up. Not many overlays are needed. On some forms none. Strength gives delicacy, evenness, uniformity, certainty. Solids can be made solid, deep shadows strong, high lights clear, with least effort and little time, on a lasting tympan. Strength saves work.

¶ A vitally important point in every two-revolution press is the manner in which the cylinder is lifted to clear the form at the reverse of the bed after impression. The Optimus way differs from any other. In simplicity, directness of action, freedom from many parts and all complications, it is vastly better, and eliminates evils due to imperfect devices for this purpose. It offers less opportunity for wear, and the consequent lost motion, than any other arrangement, while it secures the maximum of strength and resistance. It is only an oscillating eccentric box holding the cylinder shaft journals, rotating with them while lifting, and the cam and lever necessary to operate the eccentric. That is all. During impression the eccentric is firmly locked upon its center, and, therefore, no strain whatever comes upon the lifting connections. The trip is only operative when cylinder is off impression. The use of trip when cylinder is on impression has no effect, the impression will be completed perfectly. There are no springs, toggles, rods or other complexities. The massive side frames are left uncured, unbored and uncut, and take the place of the springs and rods usually employed in other presses. These other machines have their cylinder boxes loose in the side frames, in which they slide up and down with the rising and falling of the cylinder. On the contrary, as we have shown, the boxes of the Optimus are fixed as a part of the side frames, and it is the only press whose side frames carry the brunt of impression. Through them only can the greatest impressionary rigidity be found, for they are the natural, most effective, most direct and simplest means possible to use for holding the cylinder to its work. ¶ Excepting the Optimus there is no press that does not use a spring to assist in lifting the cylinder, and for that reason safety pins and mechanical devices, not always effective, are used to prevent accidents should the trip be used at the wrong time.

ROLLERS AND DISTRIBUTION.

Entirely inside the frame and out of the way our patented device for driving the vibrators on form and table rollers is the perfection of simplicity. There is nothing else like it. It is positive and noiseless, and the most effective mechanism ever used for a like purpose. ¶ The ductor roller taking ink from the fountain roller deposits it upon the first steel vibrator over the forward pair of table rollers. It is impossible for the ink to come in contact with the ink plate until after the press has made one entire revolution. It is thoroughly distributed, therefore, on one vibrator and two table rollers before it reaches the plate, and better distributed when put on the plate than is usual with many two-roller presses in common use when put on the form. In other words, it is well enough manipulated before it reaches the plate to print an ordinary two-roller job. This approaches very closely the boasted method used on stop cylinders, where the ink was worked up and evenly distributed on the cylinder before it was put upon the ink table. Not only does it increase distribution, but it gives a better, more delicate and more positive control than when the ink goes directly from fountain to plate. Table, or plate, rollers are in contact with the ink plate during both its forward and backward movements, and this, too, is a great advantage over those machines where they act upon the plate in one direction only. Compared with such a press the Optimus has practically double distribution. ¶ Excepting the pony sizes (Nos. 3 and 4) Optimus presses have the form and table rollers interchangeable. This is an economy to the user, as a roller not quite good enough for the form may go to the table, its usefulness extended. ¶ The patent eccentric roller bearings are an unequalled convenience. By a single motion of the hand they admit of the rollers being thrown out of contact with form and vibrator when it is desirable to run press to work up color, or for any other purpose. Just as simply are they brought into contact and firmly locked in place. Adjustment for contact is independent of the eccentric throw out, and is not disturbed by it. Both form and table rollers may be thrown out of action, or removed from press without affecting the adjustment of their bearings. All the rollers of an Optimus fully clear the largest form that can be worked conveniently upon the bed and cylinder. ¶ Roller capacity and distribution must be adapted to speed. Both are ample. Always with a larger superficial area of roller surface than of form, speed and high-class product are both assured. On all sizes larger than No. 6 the rollers are three and a half inches in diameter, a fact the good pressman always appreciates.

SHEET DELIVERY.

One of the distinguishing features of the Optimus is its superb patented sheet delivery. Although others have made attempts at imitation it remains absolutely unrivalled. No matter what the size of the sheet, whether it be to the full capacity of the press or but an envelope, the delivery is always ready to receive it. It needs no adjustment for either size, or anything between. Printed side up or down can be had within the time required for one impression. Either way it is impossible for anything to come in contact with the printed surface, nor can the sheet be marred or broken in the least. On much work freedom from offset is assured and slip-sheeting saved. It is the only delivery fit for the most artistic work, and best for all. Tissue or French folio can be delivered at the usual speed of the press, an impossibility on any other. Tissue is handled at 2000 per hour as a regular thing. ¶ Each sheet printed on an Optimus press is exposed to the air through the space of three impressions. The action of the delivery is like this: The first sheet printed passes from the cylinder to the rear of the delivery; with the next movement it is carried to the front of delivery, and with the next the second sheet takes its place at the rear. There are now two sheets on the delivery, one in front of the other. At the next movements the front sheet is deposited upon the jogger board, the second moves to the front, the third comes on the rear. Three impressions have been made, and we have one sheet exposed upon the board and two exposed upon the delivery, all lying flat, printed side up, without contact one with the other. The next impression covers the one on the table, which has been exposed through three impressions. After the third, every impression, of course, deposits upon the

*6 Point Old Roman Bold
opened with one-point leads*

THE OPTIMUS TWO-REVOLUTION.

board a sheet which has been and will be exposed as its predecessors. It falls naturally and lightly by its own weight and is accurately jogged. Even when covered by succeeding sheet it is done so delicately that a stratum of air remains for some time to still further the drying process. If the paper be of fair size, a dozen sheets or more may hold air between them for a long time. ¶ In a moment's time the delivery carriage can be disconnected and moved forward, telescoping upon itself, to give access to the form and rollers at the front of the cylinder. Even in this position the press can be moved or run without disturbance or interference. The delivery table is supplied with the best jogger in use; and when necessary on very fine work we have a patented device for slip-sheeting that is labor saving and unknown on other machines. Our new patented automatic tape tightener guards against shrink or stretch of tapes under atmospheric changes, prevents breakage, and maintains an even tension at all times. An even greater improvement are our patented sheet delivery fingers. No matter how buckled or unevenly bent the edge of a sheet may be they always prevent it from catching as it leaves the cylinder, while they make easy the delivery of the very narrowest gripper hold possible to securely take. Optimus presses are the only ones built without the old and noisy tumbler gripper motion, and the only ones dispensing with the objectionable shoo flies. Our patented mechanism operates quietly and registers perfectly. If the machine is started while grippers are turned back no damage can result. Altogether the perfection of this delivery works a saving of many dollars a year, not only by expediting work, but in the greatly lessened spoilage of printed sheets. The out of date and detrimental fly forms no part of it.

REGISTER.

Register is not entirely a matter of grippers, guides and tongues. It lies quite as intimately in the driving motion; and other movements in the press may affect it seriously. Permanent register can only be secured by building it into the press from the base up. The Optimus has register built in; it is incorporated as a part of every movement. It is the only way to secure and keep it. It is not patched on by some sort of a make-shift used to counteract structural faults, and which at the best is unreliable. ¶ There has not been an Optimus out of register between bed and cylinder in ten years, or since the adoption of our bed motion and the making of the improvements the new motion necessitated. A pressman may have flattened a gripper, misplaced the cam, got the tongues out of line, or done some other thing to interfere with register at the guides, all of which is easily corrected; but the assuring fact remains that the press registers perfectly on the tympan all the time. No other press is so closely coupled with as few parts between bed and cylinder. There is little opportunity for wear, and the consequent lost motion due to it. Register is thus protected and guarded, and lasts with certainty. A large number of Optimus presses are running exclusively on three and four-color process work in many places devoted to work of this character, and have been for years. In fact the first three-color work ever done on a two-revolution was done on an Optimus press, and then was first demonstrated the usefulness of this style of machine for a purpose for which it had been thought previously only stop-cylinder presses were adequate.

SPEED.

When we described the Optimus bed motion we gave the reason why speed was developed in the highest degree in this press. The fastest press must always be the simplest, the one of fewest parts and least motions. It is just this that makes an Optimus superior in speed to any other of like size. ¶ The mere fact that a press can make impressions rapidly does not constitute it a fast press. This is illustrated in the case of a printer who bought a certain machine because of its alleged speed, and found after some months' use that he must run fine work so slowly as to leave no profit; nor can he run cheap work fast and get good cheap work because, while his press will make impressions with fair speed, it is equipped with a slow distribution. To deserve the distinction of being fast a press must be speedy not only when running but when standing still, and this last speed is as important as the other and pays as large a profit. In giving to the Optimus the ability to furnish impressions at high speed we have calculated every part and action to support it, and thus aim to make rapidity thoroughly effective no matter what the character of the work. We have not made it fast in one thing only, but fast in all, a well-balanced machine. It is the only way in which a truly fast press

*8 Point Old Roman Bold
opened with one-point leads*

can be built. It gives fine work at high speed, and cheap work that is good work. ¶ The high speed of the Optimus is based not only upon its superb bed drive, but upon tremendous strength, great weight, and painstaking construction. Its rigidity gives a fast make-ready. Its impression is so even that on some forms little if any make-ready is required. On the finest cut forms these qualities combine to reduce the time and labor usually consumed. Every overlay counts for itself without disturbing the results from any other. There is rapidity in washing up and the working up of color; in interchangeability of form and table rollers; in accessibility for oiling so that this is easily done and not neglected; in absolute register; in certainty of perfect delivery without loss of time in adjusting for different sizes of sheets; in a sheet delivery whereon tissue or cardboard may be handled without bother at the usual speed of the press; in ability to back up cylinder from feeder's platform; in short, there is great handiness, which is but another name for speed. ¶ We make a guaranteed speed with every press. It is entirely within the safety limit, and can be maintained day in and day out for years without detriment beyond the natural wear. We are the only manufacturers who urge printers to get the speed. It is there. It is not what a press can do but what it does that counts in dollars and cents. And there is a speed away beyond the guaranteed speed that can be had on occasion. Some users habitually drive their Optimus presses beyond our mark. We know of a No. 12, a very large size, that has been running for five years at 1900 an hour when our guarantee is 1500. We know that on a good foundation that it will make 1800 easily. Slow speed does not necessarily save the press. Some machines at slow speed wear faster than others at a high speed. It is entirely a matter of design and construction. ¶ To produce good work speedily is success. Time is money in the pressroom. Money cannot be made on a slow press, no matter how good the work, nor on a so-called fast press incapable of the best product. Speed and quality must be combined. They are—in the Optimus.

AIR SPRINGS, BACK-UP, MOTOR ATTACHMENT, ETC.

As previously stated the reverse of the bed is assisted by air springs. These are the most efficient on any press, their superiority lying in the Babcock over-balanced piston head, which is adjusted without wrench or other tool; stays on the screw where left, and is always air-tight. By a hand nut in the center of the head all the wear is taken up. It always remains perfectly round. The air valve acts automatically, and is free from any pipe connections. ¶ An effective back-up is furnished that is operated from the feeder's platform. It also acts as a brake. Not all other machines are so equipped. ¶ Five times as many Optimus presses were sold at Baltimore after the great fire as of its next highest competitor, and several times as many as all others combined. The publishers of one of New York's great magazines compliment us on the manner nine large Optimus presses have stood an extraordinary test forced upon them by a rush of orders. "On a run of 150,000 impressions on a cut form, 39x54—140 coated paper, we kept one of your presses running night and day at a speed of fifteen hundred an hour, using one set of plates

*10 Point Old Roman Bold
opened with one-point leads*

for the entire run. The cut form of 39x54, 170 coated, is run at the rate of fourteen hundred an hour, and the super and machine finished forms on 39x54, 155 paper, at the rate of fifteen hundred or sixteen hundred per hour, all with one set of plates. We are told by some of our pressmen who have not previously worked on the Babcock presses, that there is less time lost, and less expense for repairs with the Babcock Optimus than with any presses on which they have ever worked. You may rest assured that the next time we are in the market for another press, and we expect it will be soon, our choice will be the Babcock". ¶ There are ten sizes of the Optimus: Two of two-roller pony presses are made; one three-roller for a 25x38 sheet and less, and seven sizes of four-rollers each. To any of these direct belt connected electric motor is readily attached. The motor can be located on the floor near the rear or front of the press, or placed inside the frame at the rear entirely out of the way. In either case press is arranged for motor drive before shipping. It is necessary for us to know motor speed and the size of motor pulley.

THE NO. 43 OPTIMUS.

For forms taking a 25x38 sheet and less, the No. 43 Optimus has never been approached in perfection of detail, economy and efficiency. Its combination of advantages furnishes a small press that absolutely stands alone in the market, without a rival or a competitor. We know of no work so exacting in any direction as to fully test its capabilities. ¶ It is not a pony press. While it possesses the high speed, ease of running, perfect bed motion, superb sheet delivery, compactness, accessibility and handiness of our very popular pony Optimus, and is a little larger, the No. 43 unites with these the great strength, weight, interchangeability of form and table rollers, the patented inking arrangement, perfect distribution, and all the other advantages of our large sizes. ¶ The success and superiority of the No. 43 were assured from the beginning. The first four were built nearly five years ago. These were sold at once, and have been in constant and highly satisfactory use since. From all sections of the United States, from Canada and England, we have received most flattering testimonials concerning it, and covering widely varying conditions. ¶ Three three-inch form rollers cover the form entirely. These are driven by two

12 Point Old Roman Bold
set solid

geared vibrators. Table rollers of same size are also driven by two vibrators, and are interchangeable with form rollers. The form rollers and their vibrators have an inking surface of 44 1-4 inches to cover a 23-inch form. If the form were a solid surface, there is inking capacity sufficient to cover it nearly twice. The rollers alone have a surface of 28 1-4 inches, or 5 1-4 inches in excess of form. ¶ The ink is taken from the fountain to a vibrator, and thence over the composition rollers to the ink table, where it is further worked before going to the form rollers. This is of special value on fine illustrated work. The distribution of ink, and the strength of the press, are ample for the heaviest forms possible. It is impossible to overtax either. Like all Optimus presses it will not gutter. ¶ The three-roller arrangement gives us a press occupying less space than a four-roller taking the same form, makes higher speed, requires less power, stands lower, and is more easily and quickly handled, while the new device furnishes as perfect results as heretofore obtained with four. ¶ There are five tracks under bed, two of the usual roller type, and three wheel tracks. The press runs easily, almost noiselessly, at twenty-five hundred.

THE PONY OPTIMUS

The Optimus Pony—there are two of them—is a large Optimus condensed, and is made under the same conditions to be as good as can be built. In fact the demand has been so great for these machines that we have been forced to set aside one large factory especially for their construction, with the advantages of securing from special men and special tools the very best possible product. They have the simple and speedy Optimus ball

*14 Point Old Roman Bold
set solid*

and socket bed motion, the most perfect in use; and all the other patented and special features of Optimus machines. The only notable difference is in handling the ink. There are two three-inch form rollers and plain table distribution, with riders on the table rollers. The form roller vibrator carries two composition rider rollers when necessary, an advantageous arrangement which places our pony distribution in a class by itself. With these composition riders the inking efficiency of a four-roller press is approximated. This will be appreciated in printing those forms requiring extra inking capacity. Of special value, too, are our new stripper fingers, as they make easy the delivery of sheets with the very narrowest gripper hold. ¶ Fast, strong, almost noiseless, accurate in register, and handy for make-ready, the Optimus pony is the money maker of a pressroom, and will get out several times as much work as a large jobber and do it better. It offers economy in production, and this is as necessary in printing as in any other line of manufacture.

*18 Point Old Roman Bold
set solid*

THE LOW-PRICED RELIANCE DRUM CYLINDER PRINTING PRESS.

HE Reliance is the best low-priced drum cylinder press obtainable. It has air springs, tapeless delivery, steel tracks, cut gears, noiseless safety gripper motion, eccentric bearings for throwing form rollers in or out of action, and a first-class fountain. The bed has four bearings under impression. It is, in short, a high class drum cylinder press for newspaper and job work where but one cylinder is required. It is made either with rack and screw or table distribution, in one size only, six-column quarto. ¶ In the beginning, more than twenty years ago, we learned, as some had learned before and others have learned since, that it is not possible to make a press of low cost to the manufacturer a good press to the buyer. Our aim then was, as it now is, to build a good press for as little money as possible. Our object led us easily to a good press—at a high cost to us. Nothing deterred, however, we proceeded to furnish a good press at a price that pays its manufacturers a profit much less than it should, and much less than any other press of its kind anywhere. Had we not been building other printing machines the continuation of the manufacture of the Reliance on its present plane of excellence would have been impossible at the price. No pretense, therefore, is made to build it cheaply for the purpose of meeting the demands of a cheap trade. The people for whom it is designed are those who can least afford a cheap press. The aim always has been to give its users a press exactly suited to their needs; whose excellencies would enable them to do better work; whose possession would add to the dignity and influence of the business; one that would give little or no bother, and would be durable, without constant repairs. There are some that have been in use for fifteen or sixteen years, the last few on daily editions, and they must be good machines yet; for we notice that their owners are not seriously contemplating any changes. ¶ We found that a press for the smaller offices should be as carefully designed and constructed as machines sold at a much higher price; that while its range of work was more limited it yet must possess certain qualities common to all, even the best. Impressional strength, register, distribution, speed, and correct proportion to insure long wear, are as essential in the "country" press as in the most expensive machine favored by the metropolitan printer; and these have been incorporated in the Reliance in a higher degree and in a better way than in any other of its kind. It will print the paper and the jobs, and do both well; and at maximum speed will operate easily and quietly. ¶ A number of customers are using Reliance presses that have been in service for years to print their daily editions; and though we make a guaranteed speed of 1500 an hour, some are running it at speeds much higher. We have heard of a few who speed it on daily editions to 1800 or 1900, and in one instance it is turning out over 2000. ¶ We recommend the Reliance unreservedly for all work within its capabilities. Its users commend it highly. It is a good press at a low price, and was never so good as now. The last one set up at this writing is the best ever built. ¶ There are some good low-priced folders that are readily attached to the Reliance, and when attached the equipment is complete for newspaper work, and the investment will scarcely exceed one thousand dollars for the two machines. ¶ Here is a bit of evidence that shows good mechanical design and honest construction, at least. The Reliance referred to was bought second hand by the firm now using it, and has had long use. Our claims that this press was "built on honor" and was good, are substantiated not by this one case but by many. We know that it requires instances like this to best bring conviction, and they are cited enthusiastically, yet not as often as they might be. The letter is dated Coshocton, Ohio, July 27, 1905: "Gentlemen: There is in the office of the Daily Age, Coshocton, Ohio, a Babcock Reliance that has been in use several years, that is making a record hard to believe to be true; but it is, for I have witnessed what I have to tell you. Their daily is a six-column quarto, and their circulation is from 2100 to 2900 daily (every evening). You can readily see that it would keep this press humming at the guaranteed speed of 1500 per hour to get their paper out in time with late news, but they do it with a speed as high as 2100 per hour. The press has stood this racket for a year. Yours truly, A. N. Starkes." ¶ The manufacturers say that they have known for many years that the Reliance under proper conditions, with the right man, would run 2000 to 2100 per hour, and do it nicely. They cite one in their home town that has been in use for ten or twelve years, that is in excellent shape and never gives trouble, that seldom runs less than 1800, and frequently a good deal over 2000. ¶ In a letter dated February, 22, 1906, we find this: "We note you do not care for the old Reliance, which the Globe Company is offering. They have sold this machine for three hundred dollars. It is fourteen years old and has printed a daily paper, without cessation or intermission, every business day all that time, getting out an edition of eighteen hundred. It has never broken down and never has delayed them for a minute for repairs. The working speed, for several years past, has been eighteen hundred an hour on the second side. They have bought a second hand Duplex to take its place. It is still in real good working order, and apparently, would run another fourteen years."

THE STANDARD AND REGULAR DRUM CYLINDER PRESSES.

About seven years ago we placed the remodeled Standard on the market as the highest type of the drum cylinder ever built. We remade it in its most vital part by adapting the Optimus driving mechanism to the new purpose, securing great speed, accuracy of register, and ease and quietness in operation. We gave it increased strength, and made other improvements until we perfected a drum press that for a lot of work is quite as good as a two-roller two-revolution at about half the price. With all we preserved extreme simplicity. Minor improvements have been made since, and others will be made as the advancement of printing and consequent new needs of printers disclose in what direction these shall lie. ¶ Our patent ball and socket bed motion gives the Standard the only perfect bed drive

6 Point Caslon Old Roman
opened with one-point leads

BABCOCK DRUM CYLINDER PRESSES.

on a drum press. Add to this air springs, tapeless delivery, high fountain and excellent distribution, strength of impression, exact register, noiseless gripper action, back-up mechanism, controlled sliders, patent eccentric bearings for quickly throwing form rollers in or out of action, removable and adjustable fly fingers, slitter, counter, and easily accessible type bed, with a general convenience and handiness unsurpassed, and we have the most satisfactory drum to be had at any price. We think there are more of them in use than of any two others combined. ¶There are four sizes. Nos. 2 and 4 are used almost exclusively by job printers, for whose use these small sizes are particularly well adapted. They are "handy," and lend themselves most conveniently to quick changes of forms and short runs, and their high speed rapidly disposes of long ones. ¶The No. 2 will do more and better work than two large jobbers, and will scarcely cost as much either at first or in operation. It will print a form $17\frac{1}{4} \times 23$, or a 19×25 sheet, and will give a range of work in size that is impossible on a jobber. nor can the jobber equal it in power of impression, in evenness of color or in character of high-class product. One printer we know uses three of this size. He makes a specialty of fine color and half-tone work, and the product of his machines is superb. There is nothing better issued from any two-roller press of any kind, and very little four-roller work excels it. Speed 2400 per hour. ¶The No. 4 is like the No. 2, but larger, printing a 25×38 sheet, form 23×36 . A few publishers of six and seven-column folio newspapers use this size for two pages at a time. If a weekly, much of the press's time can be given to job work; if a daily its speed of 2200 an hour is an advantage. Ordinarily, the No. 4 is to be found in the job office. As its maximum it prints the stock sheet most used for books, catalogues, pamphlets and the like; and this, in connection with its good qualities as a printing machine, its comparatively small size and speed, has made it desirable and popular. ¶The No. 6 prints a six-column quarto, and the No. 7 a seven-column quarto. These are the newspaper sizes. We think more of them are in daily than in weekly pressrooms; and wherever they are their users, without exception, are speaking well of them. They are used by publishers of monthly religious, medical, insurance, fraternal and other journals, for reprints of popular fiction, etc. Some have their presses of these sizes equipped with automatic feeders, and secure a large output. From two No. 6's, automatically fed, one user reports 28,860 and 28,240 respectively, in fifteen hours, or an average of 1900 an hour. These presses often run twenty-four hours a day for weeks at a stretch, and are easily averaging 1800 net impressions all the time. It is a large output. After the fire one firm in Baltimore put in seven, another two, while other firms in other cities make use of them in numbers. ¶The Standard has rack and screw distribution. We make it also with table distribution and call it the Regular. We furnish either style in the same sizes having equal speeds. Aside from the manner of distributing the ink they are exactly alike. Some prefer the table distribution, and for some work it is best. The high fountain of the Standard, with its extra vibrators and distributors, give excellent distribution, and approximate the advantages of the table method very closely. The Standard has the bed accessible from the front, and this is a point appreciated by the newspaper man and many others. ¶The Standard with table distribution (The Regular) in the Nos. 6 and 7 sizes, is often used by show printers, sign printers and poster printers. We have just furnished one large show printing house with four, two of each size. One metallic sign company has bought one of each for printing tin, iron and steel signs, and embosses these on the same machines. This work is done surprisingly well in black and several colors in exact register. Half-tones on tin have their distinctness and softness fully preserved, quite equalling the effects as shown when worked on coated paper or cardboard. ¶To three drum presses, the Standard, the Regular, and the Express, we have adapted the driving mechanism of our Optimus two-revolution machine. The driving motion is the vital part of a printing press, and the one upon the exactness of which the effectiveness of every other part most intimately depends. In the ball and socket motion, the simplest in use, lies the vital and basic principle for driving a reciprocating bed. It insures register, high speed and smoothness in operation. It is mechanically perfect,

*8-point Caslon Old Roman
opened with one-point leads*

BABCOCK DRUM CYLINDER PRESSES.

and has proved through years to be the best, the most natural, the only correct, the only lasting and satisfactory device for driving a printing press bed. Thousands have been in use for years. Not one has cost a user one cent, nor shown appreciable wear. ¶It is not necessary for the man who wishes to do clean, workmanlike printing to go beyond the cost of a Standard or Regular drum to accomplish his purpose. This style of press is not going out of fashion. It is as much in demand now as at any time. In fact we are selling more. For most work it is fully competent. There is some work, the result of recent development in engraving and printing, for which another style of press is better suited; but for that work which comes to the smaller offices the Standard is sufficient, in some cases best. It provides what is required, a simple and easily understood machine, low in first cost, economical in operation, and capable of high class work when such is demanded and the required skill is applied. To either the Standard or Regular a folder is readily attached.

THE FAST NO. 7 EXPRESS NEWS AND JOB PRESS.

A few years ago the demand for seven-column quarto presses began to be pronounced, and it has constantly grown. The majority of users wanted a fast press that could be sold at a less price than the No. 7 Dispatch even if such a press did not have as high speed. As most of these prospective buyers were job printers as well as newspaper publishers, a machine that would prove to be an all around good book and job press was advisable, as in the combination lay the highest possible returns on his investment to the owner. ¶With a good understanding of the needs of this class of publishers and printers, it was a comparatively easy matter to meet them. Improving upon and extending the original ideas incorporated in the No. 3 Express, a very fast machine designed especially for the exclusive use of the job printer, and which already had had several years of practical use in which to demonstrate the value of its special features, the No. 7 Express was built. It prints four pages of the standard seven-column quarto sheet. The bed is 38x51; size of matter 33¼x46; guaranteed speed 2600 per hour; shipping weight 14,000 pounds. There is only one other flat-bed press of like size that equals or surpasses it in speed, and that is the Dispatch, described herein. No other drum, and no two-revolution, of same size, approaches the No. 7 Express in this respect. In fact, in the shop, and in one or two instances in pressrooms, the machine has been run at 3000 an hour "just to show what it could do." ¶Several unique features combine to make this machine speedy; but this special and very valuable feature depends primarily upon the bed motion and the inking mechanism. The bed motion is three to one, that is, three revolutions of the star-gear to each impression. The bed, traveling a much shorter distance than in the ordinary drum, is driven by our new patented ball and socket bed mechanism, the shaft of which is nicely balanced by a new bed-shaft balancing device. The whole gives great speed to the bed, and extreme smoothness of action. The result is fully sixty per cent more speed than is possible in a press constructed in the usual way. The ball and socket principle is not new, as it has been used for years on our well known two-revolution press, and, somewhat modified, upon the Standard, Regular and No. 3 Express drums. In its highest perfection it is found in the Optimus and the No. 7 Express. ¶The inking mechanism is our new patented high fountain, three-vibrator combination, with two form rollers, each three inches in diameter.

*9 Point Caslon Old Roman
opened with one-point leads*

BABCOCK DRUM CYLINDER PRESSES

Both of the form rollers pass completely over the form with the exception of a narrow strip an inch or so wide at the back which one roller does not cover. This roller is automatically raised clear of the form at the point of reverse, but is held in close contact with its vibrator. This obviates all tendency to streak the form by reversing on the type. The other form roller, which passes entirely over the type, is driven between two steel vibrators moving endwise in opposite directions, and because of its location, possesses nearly double the inking capacity of the ordinary roller. The entire arrangement is highly efficient. ¶ The fountain and rollers are placed closer to the cylinder than is the usual practice, the rollers passing under it as far as practicable. Space is thus utilized that in all other presses is wasted, and a valuable reduction in the run of the bed is secured that materially increases speed. By hand levers conveniently placed on the side frames the entire inking mechanism can be moved forward away from the cylinder sufficiently for conveniently putting in, removing or adjusting rollers. All become readily accessible. These levers not only move the inking apparatus in and out, but automatically lock it in either position. If necessary it can be thrown forward and back while the machine is in operation. No screws or clamps of any sort are used. ¶ This press has our patented safety gripper action, which registers perfectly and operates quietly: and while it is vastly superior to, it is also a much appreciated relief from, the old fashioned, commonly used and excessively noisy tumbler gripper motion. There are air springs, tapeless rear fly delivery, and the adjustable fly as used on our Standard, Regular and Express drums, any finger of which can be easily removed or adjusted. The fly table is fitted with a first-class jogger. ¶ The driving pulleys are high speed, running seven and one-half to one, that is, seven and one-half revolutions of driving pulley to one impression. The outrigger supporting this high-speed shaft is constructed to admit a large driving pulley, making it easy to use a direct belted electric motor without alteration. There is a back-up which can be used as a brake, an adjustable feeder's platform on each side, and a feedboard but slightly inclined. The bed is perfectly supported by a strong center-girt. The cylinder is very heavy, with large steel shaft and big bearings, giving great strength of impression. ¶ The press is admirably built and finished. We have spared no pains to make it the most thoroughly up-to-date two-roller press for newspaper, first-class periodical and high speed commercial work. It is the latest and best of the drum class, and is without a rival anywhere. Its price is within easy reach of everyone who requires such a machine, and for what it secures we think it surprisingly low.

THE DOUBLE-FEED DISPATCH PRESS.

Faster than the No. 7 Express, heavier, and only for newspaper and like work, is the Double Feed Dispatch. It is an old favorite, and is intended particularly for the printing of the daily in the smaller cities,

10 Point Caslon Old Roman
opened with one point leads

BABCOCK DRUM CYLINDER PRESSES.

It is the fastest single cylinder flat-bed press of its size ever made, either drum or two-revolution. The bed runs just far enough to print the form, which is inked from both ends. For this purpose there is a high fountain, with vibrators and rollers, in front, and another in rear of cylinder. The short run of the bed has the advantage of materially reducing the size of the cylinder, which is not as large as it would be in an ordinary drum having bed of same size. The driving gear is three-to-one, and this with its heavy construction, short travel and double inking, gives a speed unknown to other flat-bed machines. It is quite as simple to operate as the ordinary drum. ¶ Its special service alone has been considered, without any attempt to fit the Dispatch for any thing else. For its purpose it has no rival. It is the only machine of its kind, and fills the gap between the ordinary drum and the perfecting press. For evening editions of 3500 or so there is no press as satisfactory. A larger morning edition can be printed as then there is more time. ¶ The Dispatch is made in one size only, a seven column quarto, bed 39x52, with a speed, on a good foundation, of 3000 an hour. Weight, 16,800 pounds. ¶ On special orders it can be built single-feed, which has as great speed as the double-feed; but this style requires the services of a very expert feeder to utilize the full capacity of the press. The double-feed permits the use of two feeders, each of whom is required to handle sheets to half the speed of the machine, with a greater certainty of securing it. A double-feed can be run as a single-feed, the change requiring but a moment's time. It is usual to run the first side with one feeder, and the last with two. Either feed-board may be used with one feeder, and but one folder is necessary. Either feeder has full control of the press. ¶ Compared with a flat-bed perfecting press the Dispatch possesses all the advantages required for the average circulation in the small cities. Not only does the former cost more than twice as much, but it requires more power, more space, higher priced labor, and the wastes are greater. Add the depreciation and interest on the increased cost, and the whole makes the expense for printing the average country daily antagonistic to an adequate profit, and far in excess of that incurred should the Dispatch be used. This machine requires a small investment, ordinary skill and experience, little power, little space, and makes little waste. It most satisfactorily solves the principal problem confronting the publishers of papers having circulations within its capacity. A folder can easily be attached. A good one is necessary to stand the pace.

THE FAST EXPRESS AND PONY DRUMS.

Read, if you have not already done so, what we have said of the Standard, giving special heed to the claims made for the smaller sizes, the sizes used by job printers. Then imagine a Standard made heavier, stronger, and improved until it runs easily and quietly at 3600 an hour. This will be the Express, in every way deserving its name. It possesses every excellence of the Standard, all its special patented features, with some others of its own. Its great speed, its smoothness in operation, its accuracy of register, come through that simplest and most perfect of bed drives, our patented ball and socket motion, which we again borrow from the Optimus. ¶ The Express is the latest development in the drum cylinder, with speed as its chief characteristic. No quality, however, needed in a first-class printing machine has been neglected or sacrificed to furnish a speed heretofore impossible in this style of press. There is considerable low-priced work that can be done on this machine at a profit because of low cost and high speed; and there is little or no work, no matter how fine or exact, coming within the limitations of two rollers, that it cannot satisfactorily do in the hands of a good workman. ¶ The Express bed is 24x31; form 18½x27. Rack and screw distribution; patented high fountain. Weight, 7100 pounds. ¶ This machine with the Pony Standard (22x27, form 17½x23, speed 2400) and the Pony Regular, same size and speed as the Standard, but with table distribution, completes a trio of Pony drums that are without a rival. Three-color process work has been done upon them; color work in many printings and most good work is possible with them. Their cost is about one half of that of a two-roller two-revolution press. They will not cost as much as two large jobbers, will do more work and will do it better. Of two of them a Kansas City firm says: ¶ "We wish to say that the Pony Standard and the Pony Express cylinder presses which you have installed in our plant in the past year are absolutely satisfactory, both as to speed and quality of work produced. We do not believe there is a press in the market that will give the same results at anywhere near the price for which these

12 Point Caslon Old Roman
opened with one-point leads

presses are sold." ¶ For nearly eleven years we have had a Standard Pony in constant use in our own printing department. It is an "old style" machine. It is not the perfected machine we sell now. Through all sorts of rushes; upon all sorts of work from plainest to that in several colors, it has always been a ready and certain means to a satisfactory end. It is a favorite, and deserves the partiality our employees have for it. Its last notable performances were the printing of the 35000 specimens (in invitation form) showing our new scripts, and the first edition of our handsome Chase Book in two colors, with halftones. ¶ Few printers indeed would put script forms—specimen forms—on a drum, and an old drum at that; nor would they attempt three-color work on such a press. This is because they do not know the Standard, and are not in any way familiar with the advantages and niceties of a first-class drum. They forget that all the improvements in presses have not been made upon the two-revolution, and that a large percentage of all printing can still be done upon a two-roller drum quite as well. ¶ The man who has a good trade that demands really nice, workmanlike, every-day printing, cannot go amiss in selecting either the Express, the Standard, or the Regular. Each has some special advantage of its own; and which of these is best adapted to his special needs is easily determined by the printer himself. No other drums as good have ever been made. They do not cost much, either at first or in operation. If he has the skill remarkably good results can be had, as satisfactory to his customers as profitable to himself. Of course a drum has limitations, but its range is not nearly as restricted as most printers pretend to believe. ¶ For the job office the Nos. 2 and 4 Standard or Regular, or the No. 3 Express, are very desirable, and

*14 Point Caslon Old Roman
opened with one-point leads*

will prove profitable. In the large pressroom they offer a low-cost and very efficient relief to the crowded two-revolutions, as in a recent case where illustrations of field flowers in eight colors were surprisingly well done on an old Standard.

THE DRUM IN GENERAL.

Each style of printing press has its good points and its special uses; and there are some things within the easy range of drum cylinders that cannot be so perfectly produced on two-revolutions, surprising as such a statement may be to many. This is illustrated by a bit we find in a recent "Progressive Printer," wherein the writer recalls "taking a printer friend to see an up to date job office in which a large amount of color-work was done on very heavy cardboard. In the pressroom was a drum cylinder, right beside a latest pattern two-revolution; and our friend said to the manager, 'Why in the world do you keep such a trap in this modern office?' We were amused at seeing his look of incredulity when told there was no other press that would do the particular work they were doing quite so well." ¶ Many are inclined to believe that the drum cylinder is a thing of the past. This in the main is an error, and is refuted by the steadily growing demand for presses of this class. It cannot be denied that much work requires a different kind of press; but there is now, and always will be, a large amount of good, clean, every-day printing to be done under

16 Point Caslon Old Roman
set solid

conditions that preclude the advantageous use of high-priced machines. These conditions demand a simple and easily understood press, one that will not require the services of an expert, and on which any good pressman may secure gratifying results with least possible outlay of time. These machines often run a part of the time only, and the investment should not be great. When the two-revolution came into prominence, the attention of both builders and users was turned to it, and for a time the drum was neglected. At that time the drum was not all it should have been; but its defects were not at all a necessary part of the drum style of press. The development of the two-revolution led later to the perfection of the drum, and its reinstatement in the good opinion of an exacting and constantly increasing trade. All that the drum needed was the careful improvements we have given it. These we have borrowed in part from the two-revolution, and they reach their highest development in the Standard, Regular and the Express.

SMITH & JONES

845-851 WEST THIRTY-EIGHTH STREET

Elegant China, Rich Cut Glass, Lamps, Clocks, Art and Japanese Wares

An intensely interesting group of sterling and unusual values, that are especially attractive now, at the very height of the wedding gift season.

Appropriate for Wedding Gifts

and also extremely desirable for those who are refurnishing the city or country home. Every item we list shows a price of splendid saving.

Rare Opportunities Offered in Open Stock Patterns

During this timely sale we shall offer complete 54-piece dinner sets (ample for six people) from any of our open stock patterns in fine English semi-porcelain, at a saving of great importance. The offering is made with the idea of interesting those who may desire a small set for the summer home and also to induce many who may not care to purchase a complete set at once to secure a splendid start in some one of our many attractive patterns to which additions can be made from time to time as their needs require. This is the great advantage of making your initial purchase from an "open stock" pattern.

\$23 silk-lined suits reduced to \$14.75

2450 of them—the originals from which the best houses ordered their swell \$24.50 silk-lined suits, destined by the favor of fashion to be very popular this coming spring. Some are our exclusive designs and if you neglect to buy now you'll find that these identical styles will cost you \$23.50 later on in the season.

\$23 silk-lined suits \$14.75

A large collection of manufacturers samples and some of our own sample suits.

Made of the finest quality cheviot—all blouse style. Workmanship the best, colors in blue and black—all sizes—

entire suit over taffeta silk—a \$23.50 suit for **\$14.75**

NO. 01, 500

The only reason that we can quote so low a price is that they are samples, the maker taking the loss—the materials are the finest—consider what a suit of like style character would cost you if you bought the materials and had it made.

New Spring Suits—Pretty effects, latest styles, collarless effects, etc., all the latest colors and newest materials—light-weight cheviots, Venetians, broadcloths, etc., strictly man-tailored, elegantly made over the finest taffeta silk trimmed with silk band and buttons. Special introductory prices **\$25** and **\$35**.

Special bargains on all winter suits \$10.00 and \$12.00

A remarkable sale of women's kid gloves.

\$1.15, \$1.25 and \$1.35 qualities for 79c a pair.

That practically tells the story, yet when you see the gloves you will agree that they are wonderful bargains. It's not a sale of "seconds" or broken lines, but the result of an important purchase of nearly six thousand pairs at a special price concession.

Women's street kid gloves, pique sewn, with correct embroidered backs, one pearl and two metal clasp wrists. They are approved London street styles and come in the popular and

79c fashionable shades of tan, brown, gray, and black. **79c**

It's a glove opportunity that seldom occurs and it will be a good investment to buy half dozen and dozen lots at the price—79c a pair.

Economy Basement—Here you'll find in progress in our newly appointed glove section the greatest half-price sale of gloves at **50c** ever held in Chicago—men's and women's gloves at half price—pair, **50c**

Extra salespeople have been employed for this extraordinary event.

PETERMAN

2573 COMMERCIAL STREET

Magnificent Showing of Tailored Suits and Waists

Late Autumn Stylish Suits

We have added many new lines to our magnificent showing of Tailored Suits. This event will attract the attention of all smart dressers because of the variety of styles. Many of these suits are our own creations, others by famous modistes

The elaborate showing of individual style that predominates at Peterman's style center will be of interest to all ladies in this vicinity, and the exclusiveness and elegance of these suits never deserved more praise from the critically inclined

TAILOR-MADE SUITS—Great variety of new and exclusive ideas in chiffons, velvets, velveteens, broadcloths, and the newest novelty weaves in fancy materials, polka dots, checks, stripes, etc. We can conscientiously recommend this showing of suits as far more elaborate in variety than we have ever before attempted.

We cordially invite all smart dressers to attend this sale and see this fine showing of suits. Priced from \$25.00 up to

\$84.73

Silk Petticoats for Fall

The Autumn showing of Silk Petticoats is displayed to particularly good advantage. Owing to the special prices quoted it will be productive of pleasure and profit

Silk Petticoats, of heavy rustling taffeta, deep tucked raised flounce and silk dust ruffle, light and dark shades. Taffeta Silk Petticoats, accordion plaited or sectional flounce. Taffeta Silk Petticoats, in two styles, accordion plaited. Is a beautiful display of Petticoats. Prices from \$5 up to **\$17.63**

Autumn Undergarments

This fine hygienic Underwear takes rank as the most perfectly adapted for a climate of such changeableness as this. In point of fit, comfort and durability is unrivaled

Women's Silk Vests, low neck and sleeveless, fancy openwork, silk lace and crochet trimmings. Extra quality Vests and tights, of fine ribbed blue merino, are in fall and winter weights. Pure Wool Union Suits, heavy weight, natural short sleeves; This is a grand display. From 48c up to **\$10.43**

Annual June Sale of Mens Negligee Shirts at 95c

It was a foregone conclusion that intense interest should develop at once we announced the opening of this annual June event—the large size of the offering and the exclusiveness of many of the patterns still favor the customer in a very generous measure. There is

A Splendid Variety to Select From

To increase the interest of critical buyers it is sufficient perhaps to say that there is a variety to select from that cannot fail in its mission to please. Embraced in the showing are the latest novelties in medium and dark effects and plain colors, with attached or detached cuffs. There are also neat attractive designs on light grounds with a choice of plaited or plain bosoms. The sizes included are 14 to 19½. These are our regular \$1.50 to \$2.50 shirts, at

95c

Boys' Suits Reduced to \$6.50

Sharp reductions in our "Best to Buy" double breasted and Norfolk suits, and Russian and sailor blouse suits, sizes 2 to 10 years, in many of the most popular shades of all wool materials. Reduced from the former selling prices of \$7.50, \$10.00 and \$12.50 to, each, **\$6.50.**

House Furnishings

Mission Furniture

We Place on Sale Today a Special Lot of Arts and Crafts Furniture at 25% Discount

The maker of our fumed oak English furniture shipped us a special lot of this furniture, including Tables, Chairs and Rockers, which are too dark to place in stock with others so they must go at this sacrifice.

Some exceptional bargain opportunities are offered.

Oriental Rug Opportunities

Rugs of Rare Quality in Great Variety of Patterns and Complete Range of Sizes

At no time have we offered anything like the assortment of beautiful floor coverings which comprise this lot. Genuine Imported weaves in neutral color mixtures. Every piece worth twice the special marking.

FRENCH

TITLE

JONZTONE BROK & CO.

Cold Storage for Furs—The distinctive feature of our great Fur Storage Room is that pure, dry, cold air is in constant circulation at a temperature of about 20 degrees below freezing; an atmosphere in which no fur-destroying insect can live. An inspection is solicited.

Men's Fine Suits of the Latest Summer Mixture

The arrival of extensive re-orders places our present stock in splendid condition

Measured by every standard, whether it be material or workmanship, whether style or patterns, our Men's Suits prove their superior worth—prove that they are the faultless productions of men who have made the designing and making of men's high-class clothing their life study, and have been wonderfully successful in their attainments.

Misses' Shirt Waist Dresses

Misses' dimity shirt waist dresses in combinations of white grounds with red, blue or black rings. The waist cheap at 16c.

ADDING A SHOE STOCK

DURING THE PAST YEAR WE HAVE OPENED MANY NEW ACCOUNTS WITH CUSTOMERS WHO HAVE NOT BEEN HANDLING SHOES. WE BELIEVE MANY OTHERS WOULD OPEN A SHOE DEPARTMENT IF THEY KNEW HOW LITTLE SPACE AND CAPITAL ARE NEEDED FOR IT; HOW EASY AND PROFITABLE IT IS TO HANDLE SHOES, AND HOW MUCH IT HELPS OTHER BUSINESS. IT MIGHT ALMOST BE SAID THAT THE SELLING OF "OPENING" STOCKS IS A SPECIALTY WITH US; WE ARE CERTAINLY WELL EQUIPPED FOR IT. WE OWN AND OPERATE ONE OF THE MOST DISTINCT SPECIALIZED FACTORIES; AND OPERATE UNDER CONTRACT A LARGE RUBBER MILL. WE MAKE ONE OF THE MOST COMPLETE LINES FROM THE FINEST DRESS SHOE TO THE HEAVIEST WORK AND PLOW SHOE

THE

Electric-Welded Steel Chase

BUILT FOR STRENGTH

Made from Silver-Gloss Steel

A One-Piece Chase

THE Electric-Welded Steel Chase is the strongest chase made, it is strictly a One-Piece Chase. There is no other process that will do this to any degree of certainty. Hand welding is bad because of the impossibility of obtaining a perfect weld through inefficient or over-heating of the steel--a half united joint is the result, which is liable to pull apart when subjected to the rigor of printing office handling.

¶ The fact that we have sold 30,000 Electric-Welded Silver-Gloss Steel Chases should be convincing enough to the prospective purchaser of chases that the Electric-Welded-One Piece Steel Chase is the only one to be considered. It costs no more than the hand half-welded, hammered together, soldered brazed or dove-tailed variety. The modern printing office equipment including Electric-Welded Steel Chases for hand, platen, web and cylinder presses.

OUTINGS *May now be spent in various ways and at various resorts, but for a fine time spend your vacation at*

THELMAN HOTEL

Situated on the shore of Cork Lake, one and a half miles north of Dogtown, stage runs daily except Tuesday and carries the mail.

FISHING AND BOATING

are of the very best in this state, grape seeds, blue carp and other gamey fish are very numerous. Steamers make daily trips to and from Frogneck, return by way of the Goose Island Boating Club.

The service of this hotel and summer resort is considered the best by the most conservative guest.

PLYMOUTH

SERIES

\$275
Cobalte Piano
for \$175

If your neighbor possesses a Cobalte Piano you probably know its many points of superiority which no other piano made possesses—its clear, resonant tone, fine sounding board, responsive touch, beautiful case and finish.

JUST THINK

of having the music of a "Cobalte" every evening in your home at the exceptionally low price of

\$1 PER WEEK

This is a proposition which you cannot duplicate in Eastville today, therefore you should not miss this opportunity of securing a really high-grade piano at this low figure. There are plenty of pianos at \$1.00 a week, it is true—but there is only one Cobalte.

CENTRAL Long 8 Express

THE EASTERN AND WESTERN

EXCURSION LINE

Both together being without doubt, in every respect, the finest and fastest excursion boats that are run in the interest of the traveling public in the United States. A trip on one of these famous steamers, on the noblest stream in the country, offers the rarest attractions. They are fitted up in the most elegant style, exclusively for passengers. Their great speed, fine orchestra, spacious saloons, private parlors and luxurious accommodations renders them unexcelled in every respect.

PLYMOUTH

BOLD

TYPE

THAT IS

**POINT LINE
POINT SET
POINT BODY**

IS

Good Type

Really high-grade printing can be done only with foundry type; and of course it goes without saying that the best type not only gives the best results, but that it is the most economical. Superior Copper-Mixed Type is as near perfection as the highest skill, in combination with the most perfect material and appliances can make it.

ROMAN BODY

TYPE FACES

Cast on Uniform Line. Partly leaded with two-point leads.

5 POINT AUTHORS ROMAN

THE matter of lining type is so important that every printer should be familiar with the details of Point-Line, Point-Set, Point-Body Lining System. This system saves the printer many a dollar in composition time, to say nothing of the increased beauty of his work. Every printer has experienced trouble in bringing type on different bodies to line, and in lining rule with type, and therefore knows the great loss of time unavoidable when lining type is not available. Take a legal blank, for instance, in which words in larger type that begin paragraphs, as well as some others, must be lined as near as may be with the letter selected for the body of the work, and in which two-point brass rule must be lined with the type; hours of valuable time must be spent by the compositor having old system material at his disposal, because of the necessity for using paper and cardboard to bring about even a semblance of alignment between the various faces and between type and rule. No printer worthy of the name will willingly send out slip-shod work; hence the time spent in lining different faces with each other and with rule is a matter of serious moment. All such expense is unnecessary now, thanks to the Uniform-Line type, and the printer is enabled to pocket the money heretofore expended for work of this kind. The Barnhart Bros. & Spindler Point-Line, Point-Set, Point-Body Lining System embodies the following well-known and tried lines: Uniform-Line.—The point line in each body to which the majority of faces are cast. All Roman and body faces are cast on this line, as well as leaders, etc. This line is so placed that properly proportioned descenders can be cast entirely upon the body, free of kerning, from smallest to largest size. All Uniform-Line cast faces will line together body for body without justification; and, by the use of point leads or slugs, one size body can be readily made to line with all other sizes. In the majority of cases the difference in line between any two bodies is two points or a multiple thereof. Text-Line.—For such faces as Scripts, Texts, or the like, where a long descender is cut for typographical effect, we have established a point line on each body always varying above the Uniform-Line two points or a multiple thereof. Hence any Text-Line face may be made to line with any face cast on Uniform-Line or Cap-Line in the same way that Uniform-Line faces on different bodies are brought to alignment, and the result is obtained as easily. Cap-Line.—For Title, Two-line, and other faces without lower case. All Cap-Line faces on the same bodies line with each other at the bottom without justification. All Cap-Line faces from the smallest size to 36-point line with each other at the bottom without any justification. All 42-point and larger Cap-Line faces line with each other without any justification. All Cap-Line faces in bodies from the smallest to 36-point will line with 42-point and larger sizes by the use of a 2-point lead. All Cap-Line faces, too, may be lined with any Uniform Line or Text-Line face with ordinary point-lead justification, the same as Uniform-Line faces on different bodies are lined together, and with no loss of time whatever. The thinking printer upon reading the above can not but be convinced of the superior features offered in the Barnhart Bros. & Spindler Point-Line, Point-Set, Point-Body Lining System. We claim that in inter-body lining combinations, the greatest use of 2-point leads is an important item to be considered. Deep cut matrices, which insure deep counters and shoulders, so necessary for electrotyping, stereotyping, and good presswork, are

Lower case alphabet, a to z, 14 4-5 ems.

6 POINT AUTHORS ROMAN

THE matter of lining type is so important that every printer should be familiar with the details of our Point-Line, Point-Set, Point-Body Lining System. This system saves the printer many a dollar in composition time, to say nothing of the increased beauty of his work. Every printer has experienced trouble in bringing type on different bodies to line, and in lining rule with type, and therefore knows the great loss of time unavoidable when lining type is not available. Take a legal blank, for instance, in which words in larger type that begin paragraphs, as well as some others, must be lined as near as may be with the letter selected for the body of the work, and in which two-point brass rule must be lined with the type; hours of valuable time must be spent by the compositor having only old-system material at his disposal, because of the necessity of using paper and cardboard to bring about even a semblance of alignment between the various faces and between type and rule. No printer worthy of the name will willingly send out slip-shod work; hence the time spent in lining different faces with each other and with rule is a matter of serious moment. All such expense is unnecessary now, thanks to the Uniform-Line type, and the printer is enabled to pocket the money heretofore expended for work of this kind. The Barnhart Bros. & Spindler Point-Line, Point-Set, Point-Body Lining System embodies the following well known and tried lines: Uniform-Line.—The point line in each body to which the majority of faces are cast. All Roman and body faces are cast on this line, as well as leaders, etc. This line is so placed that properly proportioned descenders can be cast entirely upon the body, free of kerning, from smallest to largest size. All Uniform-Line cast faces will line together body for body without justification; and, by the use of point leads or slugs, one size body can be readily made to line with all other sizes. In the majority of cases the difference in line between any two bodies is two points or a multiple thereof. Text-Line.—For such faces as Scripts, Texts, or the like, where a long descender is cut for typographical effect, we have established a point line on each body always varying above the Uniform-Line two points or a multiple thereof. Hence any Text-Line face may be made to line with any face cast on Uniform-Line or Cap-Line in the same way that Uniform Line faces on different bodies are brought to alignment, and the result is obtained easily. Cap-Line.—For Title, Two-Line, and other faces without lower case. All Cap-Line faces on the same

SPEND A WEEK AT FOREST LAKE

Come out over Sunday and let Nature prove that in this section of her domains she offers more enticing opportunities for recreation than in any other.

The Lake and Country

Right in the heart of the shadiest grove in Sylvane Forest and on the banks of a clear, cool inland lake lies the quiet little hamlet of Sylvane. The lake is over two miles long, clear as crystal, and abounds in gamey fish. Bathing is unequaled and the Mortar Mud Baths are another natural attraction.

New Forest Hotel

The new hotel is by far the most substantial building of its kind in the lake region and is superior to any for homelike accommodations and those little conveniences every traveler enjoys. A modern fire-proof structure of 300 rooms, baths, open-air dining room and spacious verandas. The Pavilion offers dancing and entertainment, tallyhos go to the Forest

PAYS FOR ITSELF

Men of limited income are prone to fancy that they cannot afford to investigate the merits of the Good Heat Furnace. Bless your hearts! You are just the ones who should be most interested. Be sure the bankers, lawyers, leading merchants, etc., are fast learning its merits and are not slow in recognizing them. Besides gaining freedom from the ordinary furnace troubles and nuisances, they have found by careful investigation that the

GOOD HEAT FURNACE Saves 1-2 to 2-3 on Coal Bills

Isn't that an important item to the thrifty book-keeper, clerk, mechanic or others of limited income? Foot up the bills for the kind of coal you have been using, then find out what the same number of tons of the very cheapest grade coal obtainable in your neighborhood would cost you, and the difference is what you could have saved by using the Good Heat.

RECORDS BROKEN TIME AND QUALITY

Two things are necessary in making good ice cream quickly. The first is a Snowflake Freezer; the second is to know how. Your dealer will sell you the freezer and we will send you free of charge the book that tells how. Ordinary freezers are seldom used because they make hard disagreeable work which always becomes an easy delightful and economical task with the

TRIPLE MOTION

SNOWFLAKE ICE CREAM FREEZER

The Freezer with a character and reputation to sustain; recognized the World over to be the highest type of excellency in Ice Cream Freezers.

MISSION

SERIES

THIS REFRIGERATOR FIFTEEN DAYS FREE

Here's a refrigerator that keeps milk longer than others. We say milk because that's the hardest thing to keep. You know its germ life that sours milk and spoils other foods. Cold discourages germ life; moisture encourages it, and that's why other refrigerators can't keep milk longer, the moisture counteracts the cold. Now, the

BAUM SYPHON REFRIGERATOR.

Is so much colder and dryer than any other because the syphons pass the air through the ice chamber so many more times, and don't let it stay with the ice long enough to absorb its moisture, and that's the first and last word on refrigeration. We want to put the same kind of a refrigerator right in your home

Try it for Fifteen Days Free

So you can know how much longer it will really keep milk and other foods; and then you must see one to appreciate it.

VOGUE ORNAMENT NO. 831, 78C

HOW TO BUY PROFIT

You can get profit by buying right. There is as much money made in buying right as in saving in any other way or at the selling end of your business. I especially pride myself on my

System of Careful Buying

of buggies, wagons and harness, and know that by buying in large contracts, direct from factories at jobbers' prices, that we are in better shape to make lower prices than any firm in this or any surrounding counties. My heavy cash buying for two houses gives me the inside prices and we can and will undersell all competition.

The Lake Shore Horse Market

GENUINE DIAMONDS ON INSTALLMENTS

The chief consideration in buying a Diamond should be based not on price but on brilliancy, pure color and perfection in cut, shape and polish. These high qualities you will find in our goods. Any article illustrated in our catalogue will be forwarded for your examination. If it is not exactly as represented return it at our expense.

TERMS TO SUIT THE BUYER

All transactions are confidential, and with every purchase we give a certificate guaranteeing quality, value and the privilege of exchange. We are the Oldest Diamond House in the world. Established since 1843.

OLIVER

PRINTYPE

Weights given are Approximate. Cast on Uniform Line.

7 A 35a 3 $\frac{1}{4}$ lbs., \$2.75

12 Point Oliver Printype

16 A 81a 8 $\frac{1}{4}$ lbs., \$6.00

These three lines are printed direct from type. The same face is used in the letter below, printed through silk to give it the ribbon effect.

Justifiers sold in 1 and 5 lb. fonts, at 54 cents per lb.

To the Printing Trade:

This is the much-wanted OLIVER PRINTYPE.

As the name indicates it is made to match and does exactly match one of the latest and most popular faces used on the Oliver Typewriter.

The type is not cut for direct printing, but is designed for printing thru silk thus giving the ribbon effect.

To print thru ribbon is but a little more difficult than to print direct from type; few can detect the difference between regular typewriting and circulars printed from this type. In any case the Oliver will make a most effective circular.

When your form is ready to lock spread a piece of China silk over its face, tuck the edges down into the furniture and lock them up with the form; the silk need not be tight; a little looseness makes the slight blur of the original; the form is printed thru the silk.

Use only new process ink; we can supply it; use rollers that have never taken other ink; do not wash them or use them for other purposes.

Try it and you will find plenty of work waiting you.

Yours truly,

BARNHART BROTHERS & SPINDLER.

May 21, 1906

Babcock Printing Press Mfg. Co.,

New London, Conn.

Gentlemen:

That I should have purchased my fifth Optimus press from you, with four in use, seems sufficient answer to your recent inquiry. Nevertheless, I will enter into particulars, as it is that I infer you desire.

When, nine years ago, I bought my first Optimus, and the first cylinder press I ever owned, I had difficulty in deciding which of the several presented to me offered the most for my money. I did not know as much about printing machines then as I think I do now. I could not afford to experiment, for which I had neither time nor money, especially money. I remember I considered carefully and conservatively every claim made by all. Being "taken" with the delivery of the Optimus I gave the order to you. I think that that was the point I then considered most striking and valuable about the press, for I was intending to do a line of very nice cut work, and your manner of delivering the sheet pleased me as offering the cleanest way of accomplishing the purpose.

Whatever doubts I may have had nine years ago about buying, do not possess me now. Practical experience for that length of time has convinced me of the value and dependability of the Optimus in other things than its delivery. In two very important points, its driving motion and its eccentric cylinder lift, I believe it embraces in the simplest forms that which is most desirable for the purposes. My first press was among the early ones with the ball and socket motion, and though this machine, a No. 6, has been in continuous use it has given no trouble whatever. So far as I can see its reverse is as smooth and easy as the latest press put in; it is absolute in register, and recently on a long run we drove it considerably beyond its guaranteed speed for five consecutive days. It has lost none of its productive power in any direction. We unhesitatingly give it the run of the forms, and have no reason to discriminate against it in any way.

At one time I did not think it possible for any machinery to grow better as it grew older in use. I know it is not theoretically sound, and it may not be practically; but I often think my Optimus presses are getting better and better. My pressman seems of the same opinion. We cannot account for it; yet we think we obtain daily evidence of this fact.

If I were not fully satisfied I would have bought some other machine. I have investigated others closely at times with this in view; but have found none offering as much as I already possessed in the Optimus. Your later presses have some minor improvements that are valuable, and are marked advances over the first I bought; but I am pleased to see that the main principles and features are the same in all.

I am, therefore, satisfied to buy the Optimus because I believe it unequalled; because it has proved a profitable thing to do, and because you have treated me to a square deal every time.

Very truly yours,

Wm. D. Dunn.

June 21, 1905

Gentlemen:-

We appreciate what you say in your letter of the 17th. and no one appreciates more than we do loyalty and friendship. Mr. Joe M. Chappel, met the writer in New York sometime ago and told this little story: "I was a kid; I had aspirations to become a great newspaper man. I had no money, but my character was good; I knew I was honest. With blithe heart, therefore, I wended my way to your St. Paul house, stated my case and was kindly advised by them that if I had not any money it was not a good thing to contract a debt and go into business, that I had better get some money first. It nearly broke my heart. I went to the hotel and shed bitter tears. Then I braced myself up and said try again, and I went to your competitor and he said, 'Why certainly; we will start you in business and lend you money and let you take your time to pay it.' And then he took me out and gave me a dinner and paid 50 cents for it, by gosh, and gave a tip of a dime to the waiter, and I thought I was in the hands of millionaires and that my future was bright and rosy.

Many times after that I concluded that the advice of your concern was sound, for I had a hard row to hoe, with many discouragements, mostly up-hill work, nearly ruin, and if I had not had good luck and good health I would have been ruined, but for years I laid it up against you that you would not trust me without any collateral. Now, however, I see that it would have been unfair to you and unfair to me if you had done it. It is not the right thing to do. I should resent it if you started a competitor against me who had not any money, i.e., if you went into business as my competitor. You would be doing me an injustice, and every other legitimate printer. It was a personal accommodation at the time, but it was a bad business policy. I recognize now that you were right and he was wrong and I prefer the right man to the wrong man, therefore you get my business. I paid up the little debt and the dinner and the tip many times over; in fact I paid dreadful usurious rates for them. We both gambled and both won, but it was a gambler's game nevertheless."

That is our case. We believe we are doing the right thing to-day in not starting competitive houses against you--houses that have not sufficient capital to do business. It has always been our principle, so that if you owe our competitor something for having started you, you owe us a great deal for not having started others against you. Isn't that a fair statement of the case and on that basis don't you think you could spare us apart of your trade at least?

Yours truly,

BARNHART BROS. & SPINDLER

Justifiers sold in 1 and 5 lb. fonts, at 54 cents per lb.

March 28, 1906

Messrs. Bronson & Sanbron,
Middlesex, Ind.

Gentlemen:

Printing an imitation typewritten letter is little more trouble than ordinary printing. It is a growing specialty, as is shown by one Chicago man who does this work and nothing else. He began some years ago with one man and weekly expenses of \$25.00. Now he employs 160, and his weekly pay roll alone is over \$1500.00, and growing.

The imitation can be so well done that not many will detect it; and even if known to be counterfeit it is yet a more effective circular than the one printed in ordinary type.

When your form is ready to be locked up, spread a piece of China silk over its face, tucking the edges down into the furniture and locking them up with the form. Silk need not be tight. A little looseness gives more of the almost imperceptible blur that marks the original. The form, of course, is printed through the silk, the rollers inking the silk and not the type. If you want a heavier effect use two thicknesses of silk.

Copying ink will not do. A new process ink is necessary. Use rollers that have never been covered by any other ink. When used with process ink rollers should never be used for any other purpose, and should never be washed.

A little experimenting will open up a new and profitable business for you.

Yours truly,

BARNHART BROS. & SPINDLER

Barnhart Bros. & Spindler
Chicago, Ills.

Gentlemen:

I have been a customer of your house for fifteen years; I have traded with you in preference to all others. Do you know why? Well I'll satisfy your curiosity.

I have discovered that you fill orders, not only with the best type and material and machinery, but that you fill them with such promptness and care that an error or a delay is something almost unheard of; certainly it is something that I have almost never experienced in my dealings with you.

Last Tuesday I had a hurry order which came in at 3 p. m. It must be delivered to the customer the next evening; upon starting the work I found to my dismay that I was unable to do the work because I lacked two fonts of type, and some special brass rule. I called you up told you of my dilemma and at 8 o'clock the next morning you landed the material in my office. I now have a happy customer and his sovereigns are in my breeches pockets. It was your usual way.

I have had printing offices in various parts of the country and have had occasion to order from various branches of your house. In every case I have found the branches like the main house prompt, exact and intelligent. And that's why I trade with you.

Gratefully yours,

THE COAKLEY PUBLISHING CO.

Gentlemen:--

We have in our printing office the following supplies: 1575 pounds of your Superior Copper-Mixed Point-Line, Point-Set and Point-Body body type; 325 fonts of your Uniform-line job type; 210 pounds of your brass rule; 800 pounds, more or less of your leads, slugs and metal furniture; one No. 7, four-roller Babcock Optimus Press; one No. 4, Babcock Standard Press; two Chandler & Price Gordon Presses; two Challenge Gordon Presses; one 28 1/2 inch Reliance Paper Cutter; one Hamilton Upright Engine; Silver Gloss Steel Electric-Welded Chases including full sets for each job press, and a complete equipment of Hamilton's Wood Goods, Cabinets and Furniture.

We don't want to sell them; we want to keep them and get more. Every article above mentioned we have bought of you, and every article is a money-maker; with two trifling exceptions we have never had a complaint to make of anything you sold us or any service you gave us, and in those cases you so promptly and heartily "made good" that we were almost ashamed of our complaints. Anyway your goods and your ways have tied us to you for all time; and in this thanksgiving season we are moved to write you this letter of good will and to say that if we've never said it before we have nevertheless felt thankful to you for all the good you have done us.

Sincerely yours,

HARMONY PRINTING CO.

April 14, 1906

The Nealy-Beaumont Company
Eastwood

Dear Sirs:-

In reply to your inquiry of recent date, regarding chases, our Electric-Welded chases made of Silver-Gloss steel will do away with the trouble you call attention to. For color printing where a perfect register is a matter of utmost importance, the Electric-Welded chase bridges the difficulty so often present in chases of the old pounded together style. Possibly a comparison between the old (hammered together variety) and the new (Electric-Welded product) methods of manufacture will convince you of the superiority of the Electric-Welded chase when made of Silver-Gloss steel. The forge, the anvil, the hammer, and the smithy's strong arm were the necessary factors in the manufacture of the chase made before the introduction of the Electric-Welded. The uneven heat of the forge and the uncertain blow of the hammer in the old, has in the new way been superseded by the gradually increased heat of the electric current, and the lever controlled pressure, both of which are scientifically combined in the modern electric welding forge. Only by the latter method is it possible to produce a perfect chase; one that is square inside and out; one that will lay flat; one in which type will not work up.

Under separate cover we are sending you our latest chase pamphlet, in which will be found full information as to size, prices, etc.

Hoping to be favored with an order from you at an early date, we beg to remain,

Yours very truly,
Barnhart Bros. & Spindler.

Dean-Hicks Printing Co.,
Grand Rapids, Mich.

Feb. 10, 1906

Gentlemen:

Concerning your letter referring to ours of the 20th. To make an excavation costs time and money. The larger the hole the more it costs, and the less chance for its being filled quickly or easily.

In type the excavation is the "counter", the deeper it is the better for the printer, and the more it costs the type-founder. It cannot be filled readily with lint from paper, sediment from ink and washing liquids, and dust and dirt from every source.

Being deep-cut there is opportunity for the face of the letter to wear down considerably before it will begin to show indistinctly as a blotch. The shallow counter, as the small hole, is filled quickly and easily; and often this sort of type is rendered useless by the filled counter when the face itself is little worn. High shoulders accompany the shallow counter. and these are apt to show on paper, as you have sometimes seen.

Deep-cut type is necessary not only for maximum service when it itself is used on the press, but is even more essential when electros and stereotypes are made from it. In these it duplicates itself, and gives the deep shells and matrices needed in good and fast presswork.

Deep-cut type -- and that is our type -- is best for every use. Type possesses no quality more important than this. It means longest wear, good plates, good presswork. It saves at every turn; and were we to charge a considerable percentage more than we do, ours would still be cheapest. We furnish, too, the most durable metal known, with point-line, point-set and point-body, supporting faces that are artistic and handsomely useful.

Respectfully yours,

BARNHART BROS. & SPINDLER.

April 14, 1906

Mr. Morgan L. Wrightley,

Compliance, Ohio.

Dear Sir:

You ask concerning the term "Superior Copper Mixed" employed to distinguish the quality of our type metal.

It came about quite spontaneously years ago when we had ended our primary experiments to discover an alloy for use in the manufacture of type that would be more durable and better than any known. When, with much money and time we had accomplished this, it came as naturally as breathing to call the result "Superior Copper Mixed" Type Metal.

As you know, ordinary type metal is an alloy of lead, antimony and tin. These can be mixed in many proportions. Each mixture will give a different metal, and each will have a wearing quality at variance with the others. Our experiments discovered those proportions of these metals giving highest result in durability, and to these we added Copper to give even greater tenacity and wear resistance.

We make the best type metal known. We make it uniformly and all the time. It is a very Superior metal, and is Copper Mixed.

Respectfully yours,

BARNHART BROS. & SPINDLER.

June 11, 1906.

Chicago, Ill.

Dear Sirs:

When I bought my outfit of you nearly five years ago, your salesman mentioned as one of the reasons for dealing with you and using your type that you cast all your type under one roof; that if I wanted in future to add to a font or to procure sorts I would get quick service from you because of that fact, because I wouldn't have to wait till the casting foundry, perhaps located in a distant city, should cast and forward the supplies. That seemed to me a good reason for giving you the order at that time, I have had something like fifty chances to applaud my good judgment and to confirm your excellent argument.

In past years I have had bitter experience of waiting for sorts and type and material, I have lost work and patience and almost imperiled my immortal soul because of delays that have followed orders. Since I have traded with you its been smooth sailing and I do not think I have had just cause for complaint.

I find that I do not now feel compelled, as I once did, to lay in large and unnecessary stocks of goods to provide for POSSIBLE future wants. If I need a thing QUICK I can get it of you.

I like that sort of a thing and therefore I like you and I don't care who knows it.

Yours fraternally

WILLIAM B. TEMPLE.

Feb. 9, 1906.

Messrs. Barnhart Bros. & Spindler,
Chicago, Illinois.

Gentlemen:

I used to be in the machine business, and having recently bought a press from you am moved to make a few reflections. The rebuilding of machinery in the proper way requires no mean ability; if anyone doubts this statement let him experiment a little in buying second hand machinery from various firms that overhaul it. I have bought several machines, and without flattering, want to say to you that none of them has come up to the high standard which you established in the Cottrell & Babcock Drum Cylinder that you have just sent me. The things that I have gotten under the title of overhauled machines have generally proven wrecks, and caused lawsuits, failures and profanity. I believe, as one of your advertisements says, you have applied to this part of your business the same ability and conscientious thought used in making SUPERIOR COPPER-MIXED TYPE famous. Quality tells! Quality Pays! and the best man will want the best; perhaps he will experiment to find what the best is, but my experience is that in all lines of printers' supplies you are furnishing the best that can be had. You are saving money to the buyer and you are making it easier for him to do business. I saw a statement that during the past 15 years you have sold nearly 10,000 second-hand machines, and I wonder with how many kicks. You must have come out without bruises and with abundant credit to yourselves for you have made 10,000 buyers happy.

I went thru your shop once and noticed these things: When a press comes in it looks like a heap of old iron; you put it into a lye vat, so that all the grease, putty, paint and other concealing makeshifts come off and the thing lies there in its nakedness, exposing all its weak spots; that you throw away many a machine because you cannot recommend it or because it will not pay to rebuild it; but that when a machine is rebuilt it is rebuilt, not rubbed up, slicked up, puttied, pasted and painted up, but rebuilt.

I like to tell you this, it is simple justice to a firm that does its work right and gives the customer a square deal.

Yours truly,

John N. Albro.

Silk Gloves

Double Finger Tipped

We call special attention
to our Silk Gloves and our
Lisle Gloves which are su-
perior and trade Winners

Correct styles cost no more than the
undesirable or obsolete ones.

J. T. Bumpes & Co.
Egypt

The success of a Glove Department depends upon having the correct styles and colorings as well as the proper qualities. A great deal also depends upon the clerks that are employed, ours are always courteous to everybody.

6 POINT LINING GERMAN

Einige Erholungstage, die ich endlich erübrigte, beschloß ich zu einem Ausflug zu benutzen, der mir in möglichst kurzer Zeit möglichst viel und verschiedenartige Erscheinungen der schweizerischen Natur vor Augen führen sollte. Der Rigi, welcher von Zürich aus in einem Tage erreicht werden kann, bietet zwar in dieser Hinsicht Reichthum genug; aber das Panorama, das man von ihm aus überblickt, liegt mit seinen Einzelheiten dem Zuschauer zu ferne, als daß er seine Neugier im Speciellen befriedigen könnte. Ueberdies gewährt schon der Uetliberg bei Zürich einen allgemeinen Ueberblick über die Alpenkette vom Sentis bis zur Jungfrau. Man rieth mir daher eine Tour nach dem Wallensee und nach Glarus an. Ich fuhr mit dem Dampfschiff nach Rapperswil, in dessen Nähe Freiligrath, nachdem er mit mir von Brüssel gekommen war, eine ländliche Zurückgezogenheit kultivirte, und fand in ihm einen bereitwilligen Reisegefährten. Von Rapperswil fährt man mit dem Dampfschiff nach Schmerikon, am Ende des Züricher See's gelegen, und von hier aus gelangt man mit dem Postwagen in einigen Stunden nach Weesen, wo der Wallensee beginnt. Der Weg von Schmerikon führt durch ein breites, vom Linththal durchflossenes Thal, an dessen beiden Seiten sich die ersten Bergriesen in zunehmender Größe aufgestellt haben. Unter ihnen zeichnet sich der 6000 Fuß hohe „Speer“ mit seiner seitab gefehrten Spitze aus. Bei Weesen theilt sich das Thal in zwei neue: das rechts fortlaufende führt nach Glarus, das links gelegene wird vom Wallensee ausgefüllt. Weesen hat eine ungemein schöne Lage und erregt das Bedauern, daß der Platz, auf welchem es liegt, nicht zur Anlage einer großen Stadt benutzt worden ist. Nach der hinteren Seite sieht man in das Glarner Thal hinein, welches von dem kolossalen, mit Schnee und Gletschern überzogenen Glarner (8000 Fuß hoch) beherrscht wird; nach der vorderen Seite überblickt man den Wallensee, umstarrt von zackigen Felsstuppen. Unter diesen fällt namentlich der mehr in's Land hinein-gelegene Mützenstock, ein Hauptatzyl der Genssen und Murmelthiere, in die Augen, dessen zierliche, gothischen Thurmverzierungen ähnelnde Spitzen aus ihrer mehr als 7000 Fuß betragenden Höhe die vorderen Umgebungen des See's überschauen. Diese Umgebungen werden immer wilder und ungewöhnlicher, je weiter das Dampfschiff von Weesen aus den See hinauffährt. Namentlich zeichnet sich das linke Ufer aus. Es besteht aus einer ununterbrochenen Reihe zackiger und zerklüfteter Felsen von den verschiedenartigsten Formen, welche steil aus dem See heraus zu einer durchschnittlichen Höhe von 6—7000 Fuß in die Luft hinaufstarren. Von einem derselben stürzt ein Wasserfall über 1000 Fuß hoch herab, oder vielmehr er spinnt sich, durch den Widerstand der Luft zertheilt, wie ein zerfasertes seidenes Band den Felsen hinunter. Ähnliche Wasserfälle, jedoch von geringerer Höhe, finden sich mehrere dort. Außer ihnen bilden ver einzelte Farnen, Grasplätze und Sennhütten,

Per font, containing one character of each, 75c. Single characters, 25c each.

JIM CROWS

Per font, containing one character of each, 75c.

JESTERS

Per font, containing one character of each, 50c.
Single characters, 25c each.

MEPHISTOS

Per font, containing two characters of each, 50c.
Single characters, 20c each.

KITS

Per font, containing one character of each, \$1.00

AUTOS AND HORSES

Per font, containing one character of each \$1.00

OLYMPICS

Per font, containing one character of each, 75c

JINGOS

Per font, containing one character of each, 75c

GRIFFINS

Per font, containing one character of each, 75c

JOB TYPE

SUNDRIES

MOONIES

Per font, containing one character of each, 50c.
Single characters, 20c each.

MALTESE CROSSES

Price per font, each size, 25c. Single characters, 5c each.

OUTLINE STARS

Fonts containing four of each size, 50c

FIVE POINTED STARS

Fonts containing four of each size, \$1.00. Single characters 12 point and smaller, 5c; 14 to 20 point, 6c; 24 to 30 point, 10c; 36 to 42 point, 15c; 48 point, 20c.

CATTLE BRAND BLANKS

The first figures in each number designate the size of the body. Cattle Brand Blanks sold in quantities at 2d class prices.

—		—		—		—	
Dashes No. 12						Per font, \$0.50	
30		36		48			
—		—		—		—	

Separate fonts of each body and style as follows: 5 to 24 point inclusive, 25c per font; 30 to 48 point inclusive, 50c per font.
Lining Dashes also sold in quantities at second-class prices.

PARAGRAPH MARKS NO. 1

Font including all sizes.

Per font, \$1.00

PARAGRAPH MARKS NO. 2

Font including all sizes.

Per font, \$1.00

PARAGRAPH MARKS NO. 3

Font including all sizes.

Per font, \$1.00

PARAGRAPH MARKS NO. 4

Font including all sizes.

Per font, \$1.00

Separate fonts of each body and style as follows—6 to 24 point inclusive, 25c per font; 30 to 48 point inclusive, 50c per font.

HANDY FISTS

HANDY FISTS NO. 5

Per font, containing one character each of 6 to 30 point size, 50c; 36 to 48 point size, 75c.

Above fists sold separately at the prices given over each.

HANDY FISTS NO. 6

Per font, containing one character each of 6 to 30 point size, 50c; 36 to 48 point size, 75c.

Above fists sold separately at the prices given over each.

HANDY

FISTS

Cast from Superior Copper-Mixed Metal.

HANDY FISTS NO. 7

Handy fists shown above, per font including one each, 50c.

SUPERIOR AND INFERIOR

LETTERS AND FIGURES

The font prices quoted are for separate fonts of Superior Letters with Figures and Inferior Letters with Figures.

BODY TYPE

ACCENTS

Body Type Accents when ordered with a font will be charged at the same rate per pound as the font itself, and for accents so ordered there will be no minimum quantity or sort matrix charge.

Fonts of accents of any language when ordered separately will be charged at the same rate per pound as the font they match, same subject to minimum charge of 35 cents, but no sort matrix charge.

The following is a list of accents in the different languages, and unless otherwise stated orders for body type accent fonts will be furnished as follows:

Bohemian á č ď é ě ě ě ě ě ě ě ě Ǻ Ć Đ Ě Ě Ě Ě Ě Ě Ě Ě	Hungarian á é í ó ö ö ö ö ö ö ö ö ö ö	Portuguese á ā ç é ě ě ě ě ě ě ě Ǻ Ć Đ Ě Ě Ě Ě Ě Ě Ě Ě

JOB TYPE ACCENTS

Job Type Accents when ordered with a font will be charged at the same rate per pound as the font itself, and for accents so ordered there will be no minimum quantity or sort matrix charge.

Accents of any language when ordered separately will be charged at the same rate per pound as the font they match, same subject to minimum charge of 35 cents, but no sort matrix charge.

Accents for Job Faces also put up in Fonts at weights and prices shown on page 743.

Unless otherwise stated orders for job type accent fonts will be furnished as follows:

Bohemian

The minimum charge for Cut Rule on one order is 40c list, subject to the prevailing discount.

For lengths between those given charge the next longer piece.

Quantity Discount—If the amount of cut rule, one body and face, ordered at one time, equals or exceeds \$10.00, deduct 5 per cent before taking off the regular discount allowed on rule; if \$20.00 deduct 10 per cent.; if \$50.00, 15 per cent.; if \$100.00, deduct 20 per cent. This quantity discount applies only to the above cut rule.

For Nicking, at one end or bottom, add 5 cents per pound, based on the number of ems in table on page 769; at both ends, or one end and the bottom, 10 cents per pound and on both ends and bottom 15 cents per pound. Nicking charge is not subject to the quantity discount above mentioned.

PRICE LIST OF CUT RULE.

All rule other than that put up in regular labor-saving fonts will be charged according to "Price List of Cut Rule" tables. These prices are for Plain Rule. To obtain the price of Fancy Rule add 20 per cent. to the following table. For Beveled Linotype Column Rule add 40 per cent., using larger end of the body as a basis. The minimum charge for Cut Rule on one order is 40c list, subject to the prevailing discount.

For lengths between those given charge the next longer piece.

Quantity Discounts—If the amount of cut rule, one body and one face, ordered at one time, equals or exceeds \$10.00, deduct 5 per cent. before taking off the regular discount allowed on rule; if \$20.00 deduct 10 per cent.; if \$50.00, 15 per cent.; if \$100.00, deduct 20 per cent.

For Nicking, at one end or bottom, add 5 cents per pound, based on the number of ems in table below; at both ends, or one end and the bottom, 10 cents per pound; and on both ends and bottom 15 cents per pound. Nicking charge is not subject to the quantity discount above mentioned.

Fonts DO NOT include miters. For prices of miters see tables below.

The above prices are for regular standard Labor-Saving fonts, put up according to schemes shown on pages 772 and 773. All rule cut to, or put up, by any other scheme will be charged for in accordance with the price list for cut rule pages 768 and 769.

Other bodies are so seldom called for that fonts are not carried in stock and will be made up to order only at price per piece listed in price list of cut rule.

Odd size fonts may be put up out of any two of these schemes. Thus a 30-pound font may be put up out of a 25 and a 5 pound font, 20 and 10, or two 15-pound fonts; but it may not be put up out of a 25, 3 and 2 pound fonts. Such special fonts will be charged for at the rate of the next smaller font. In the above case (30 pounds made up out of a 25 and a 5-pound font) divide the cost of a 25-pound font by 25 and multiply by 30. If a 5-pound font be made up out of 4 and 1 pound fonts, or 3 and 2 pound fonts, the combined price of the two fonts will be charged.

MITERS IN SINGLE SETS

Miters will be sold in single sets, 1 to 6 ems in length, at the following prices per set (4 each right and left).

BODY	PRICE PER SET	BODY	PRICE PER SET	BODY	PRICE PER SET
1 point..	\$0.15	5 point..	\$0.25	9 point..	\$0.40
1½ point..	.15	5½ point..	.25	10 point..	.40
2 point..	.15	6 point..	.25	11 point..	.40
3 point..	.15	7 point..	.25	12 point..	.40
4 point..	.15	8 point..	.25		

FONTS OF MITERS

Fonts of miters are put up at the following prices, containing the number of sets as noted:—A "set" of miters consists of 4 right and 4 left miters.

BODY	NO. SETS		PRICE	BODY	NO. SETS		PRICE
	2½ EMS	5 EMS			2½ EMS	5 EMS	
1 point..	2	2	\$0.50	6 point..	2	1	\$0.50
1½ point..	2	2	.50	7 point..	2	1	.50
2 point..	2	2	.50	8 point..	2	1	.50
3 point..	2	2	.50	9 point..	1	1	.50

LABOR-SAVING BRASS PANEL RULES

The panels shown below are made from Rule No. 468 showing various sizes and lengths. The waste and labor necessary to cut the pieces from Strip Rule is large and expensive.

Each piece is mitered at both ends and the outside measurement is stamped upon each piece and is always even picas unless otherwise ordered. Panels of any given number of ems up to 50 outside measurement may be made with four pieces of this rule, and with a font "ads with panels" can be as quickly and cheaply set as ordinary matter.

Regular fonts contain four pieces of each length from 1 to 25 or 1 to 50—12 point ems, outside measure graduated by 12 point ems.

Brass Panel Rules can be furnished in regular fonts of all plain faces at prices below. They may be cut to order of any face rule to any scheme or lengths wanted at prices quoted upon application.

Black face, parallel, and other plain face rules furnished in regular fonts at prices below.

The number of pieces contained in a 100-pound font is 2 times that of a 50-pound font.

BRASS COLUMN RULE

SIZE	FACE MEASUREMENT	6 POINT	7 POINT	8 POINT	9 POINT	10 POINT
4-column folio or quarto	13 $\frac{3}{4}$ in.	\$0.38	\$0.44	\$0.50	\$0.56	\$0.62
5-column folio or quarto	17 $\frac{3}{4}$ in.	.48	.56	.63	.71	.78
6-column folio or quarto	19 $\frac{3}{4}$ in.	.53	.62	.70	.78	.87
7-column folio or quarto	21 $\frac{3}{4}$ in.	.58	.68	.77	.86	.95
8-column folio or quarto	23 $\frac{3}{4}$ in.	.63	.73	.83	.93	1.03
9-column folio or quarto	25 $\frac{3}{4}$ in.	.69	.79	.90	1.01	1.12

6-ems pica equal to one inch. The above prices include the 2 cent charge for notch over.

For lengths not listed above figure according to the "Price List of Cut Rule" pages 768 and 769. Full length of rule over all is used as a measure.

Add 2 cents for each notch over, and add 5 cents for each notch under for use of brass reglet. Add 10 cents for each lug or shank or 8 cents in addition to above prices.

Column Rules—made as per style "B"—10 cents each extra; as per styles "C" or "D" 15 cents each extra or 13 cents in addition to the above prices

A "notch over" is the shoulder cut from the face of the column rule, to allow for foot slugs. This style is seldom used for perfecting press.

A "notch under" is where column rule is cut out at head to allow for brass or metal reglet next to head rule. This allows column rule to go flush to head rule and obviates the necessity of using slugs at head of type column.

A "lug" or "shank" is a portion of column rule, which is cut off face at foot, to allow for foot sticks in perfecting press chases. Notching and lug charges are subject to both the quantity and the regular rule discount.

Styles of Notched Column Rules Most Commonly Used.

Regular Notched Column Rule, Style A.

In ordering Column Rules, Style A, give quantity, size of body and length of face. The shank on this style is always made as long as the body of the rule, viz: on 6-point rule, the shank is 6 points; on 8-point, 8 points, etc.

Special Notched Column Rule, Style C.

In ordering Column Rules, Style C, give quantity, size of body and length of face, and height and length of shank, height of notch under and length of nib.

Special Column Rule, Style B.

In ordering Column Rules, Style B, give quantity, size of body, and length of face, and height and length of shank. This style is most generally used for stereotyping.

Special Notched Column Rule, Style D.

In ordering Column Rules, Style D, give quantity, size of body and length of face; height and length of shank; height and center notch and height and length of lower nib.

BEVELED LINOTYPE COLUMN RULES

SIZE	FULL LENGTH	5X8 PT.	6X7 PT.	7X8 PT.
6 column	19 $\frac{3}{4}$ in.	\$0.74	\$0.86	\$0.98
7 column	21 $\frac{3}{4}$ in.	.81	.95	1.07
8 column	23 $\frac{3}{4}$ in.	.88	1.02	1.16

These prices include the 2c charge for notch over. Figure other sizes and lengths according to "Price List of Cut Rule" pages 768 and 769, adding 40 per cent thereto, using larger end of body as a basis.

Quantity Discounts—If the amount of cut rule, one body and face, ordered at one time, equals or exceeds \$10.00, deduct 5 per cent before taking off the regular discount allowed on rule; if \$20.00, deduct 10 per cent; if \$50.00, deduct 15 per cent; if \$100.00, deduct 20 per cent.

HEAD

RULES

BRASS HEAD RULES

Following prices are for any single, double, parallel, or triple rule shown on preceding pages.

SIZE	LENGTH INCHES	3 POINT	4 POINT	5 POINT	5½ POINT	6 POINT	7 POINT	8 POINT
4-column	87 ⁷ / ₈	\$0.12	\$0.16	\$0.20	\$0.22	\$0.24	\$0.28	\$0.31
5-column	111 ¹ / ₈	.16	.21	.26	.28	.31	.36	.41
6-column	133 ³ / ₈	.18	.24	.30	.33	.36	.42	.48
7-column	155 ⁵ / ₈	.21	.28	.34	.38	.41	.48	.55

PATENT COPPER AND BRASS THIN SPACES

One of the handiest things a printer can have is a full assortment of Patent Copper and Brass Thin Spaces. To use them once is to appreciate them. They are made in two thicknesses, one-half and one-point, and are cut upon order for any point body. The half-point spaces are made of copper and the one-point of brass, so that different thicknesses may be distinguished at a glance. They are accurately cut by machinery; are cheap, never break, and never wear out. These spaces are put up in fonts of different assortments as follows:

WOODEN CASE, CONTAINS 10 OUNCES OF ONE-HALF AND ONE-POINT THIN SPACES ASSORTED IN SIZES FROM 6 TO 72 POINT INCLUSIVE.

CARDBOARD BOX, CONTAINS 10 OUNCES OF ONE-HALF AND ONE-POINT THIN SPACES ASSORTED IN SIZES, 12, 18, 24, 36 AND 48 POINT.

- Font No. 1, Containing 16 oz. of One-Half Point Copper Thin Spaces, cut the following sizes: 6, 8, 10, 12, 14, 16, 18, 20, 24, 30, 36, 42, 48, 60, 72 point..... **\$1.75**
- Font No. 2, Containing 16 oz. of One-Point Brass Thin Spaces, cut the following sizes: 6, 8, 10, 12, 14, 16, 18, 20, 24, 30, 36, 42, 48, 60, 72 point..... **1.75**
- Font No. 3, Containing 16 oz. of One-Half Point Copper and One-Point Brass Thin Spaces, cut the following sizes: 6, 8, 10, 12, 14, 16, 18, 20, 24, 30, 36, 42, 48, 60, 72 point..... **1.75**

Above price per font includes a neat wooden box.

- Font No. 4, Containing 10 oz. of One-Half Point Copper Thin Spaces, cut the following sizes: 12, 18, 24, 36, and 48 point..... **\$1.00**
- Font No. 5, Containing 10 oz. of One-Point Brass Thin Spaces, cut the following sizes: 12, 18, 24, 36, and 48 point..... **1.00**
- Font No. 6, Containing 10 oz. of One-Half Point Copper and One-Point Brass Thin Spaces, cut the following sizes: 12, 18, 24, 36 and 48 point..... **1.00**

Above fonts are put up in cardboard boxes as shown in cut.

Ounce and Pound Prices

We cut upon special order any point body, from smallest to largest size and furnish same in 2-ounce packages of either the one-half point copper or one-point brass or 2 ounces of copper and brass assorted at a price of **25 cents** per package of any one size. Also sold by the pound as follows: 5 point, **\$2.50**; 5½ point, **\$2.25**; 6 point, **\$2.00**; 7 point **\$1.85**; 8 point, **\$1.75**; 9 point, **\$1.65**; 10 point, **\$1.55**; 11 point, **\$1.45**; 12 to 16 point, **\$1.40**; 18 to 30 point, **\$1.35**; 36 point and larger, **\$1.30**. A pound may contain either brass or copper or both.

SHORT LEADS AND SLUGS

Each font consists of accurately cut labor-saving leads and slugs in four thicknesses, 1, 2, 3 and 6 point, as shown in illustration, which also shows style of box in which they are sold.

- 18 point assortment, including case, per font..... **\$1.50**
 24 point assortment, including case, per font..... **1.50**
 36 point assortment, including case, per font..... **1.50**
 48 point assortment, including case, per font..... **1.50**
 60 point assortment, including case, per font..... **1.50**
 Five assortments ordered at one time..... **7.25**
 Four-ounce packages of 2, 3 or 6-point, each.... **.25**

LEADS FOR LINING TYPE

- Font No. 1, Brass, one-point; contains 7 pieces each 1 to 10 ems by nonpareils, 7 pieces each 11 to 14 ems, 5 pieces each 14 to 19 ems, and 6 pieces 20 ems by picas..... **\$1.00**
- Font No. 2, Two-point; contains 12 pieces each from 1 to 20 ems by picas, 12 pieces each from 1 to 10 ems by nonpareils..... **1.00**
- Font No. 3, Three-point; contains 8 pieces each from 1 to 20 ems by picas, 12 pieces each from 1 to 10 ems by nonpareils..... **1.00**
- "The Midget," labor-saving case, having twenty-nine compartments, will hold either three fonts of No. 1, or one font each of No. 2 or 3..... **.60**

ANGULAR QUADS

With these quads lines can be set quickly and securely at any one of several different angles to the straight lines, and with but little space between.

Angular Quads are put up in fonts, one of which contains quads whose straight sides are 8x8 points and 8x4 points respectively; the second, 10x10 and 10x5; and the third, 12x12 and 12x6.

8 POINT
Per half pound font..... 80c

10 POINT
Per half pound font..... 85c

12 POINT
Per half pound font..... 60c

The object in cutting off this corner is to show how close type may be set to rule by the use of Angular Quads.

TO THE TRADE

On the pages following will be found described and illustrated almost everything in the way of material, machinery and supplies required in the printing office.

Every article listed is the best of its class, and prices are as low as legitimate business principles will allow. No one can buy cheaper than we; no one buys in such large quantities; hence it is that our prices are as low as the lowest.

A letter to us giving full particulars as to what you require will bring you an estimate by return mail.

PRICE LIST

We quote Manufacturers' Prices, which are subject to change.

BENZINE CANS

Safety cans prevent leakage of benzine or its vapor. Insurance companies require benzine to be kept in entirely closed metallic cans, and these with automatic stoppers not only save loss caused by evaporation, but tend to keep premiums on insurance policies at the lowest rate, besides avoiding any chance for claims that fires were caused by the ignition of benzine contained in an open receptacle. They are cheap and handy, and no printer can afford to be without them.

BOOKBINDERS SUPERIOR LETTERING PALLET

BRASS TYPE

Specimen book of Brass Type will be sent upon application.

This is the best made Pallet in the market. Made of solid brass and is handsomely finished. Has capacity for a line $4\frac{1}{2}$ inches long. Its adjustment is governed by thumb-screws centering the line with one operation from either end. It is an indispensable tool for bookbinders.
Superior Lettering Pallet\$6.00

BOOKBINDERS PRESS BOARDS

These cases are made of hardwood, paneled sides and nicely finished. The boards are separated by fixed hardwood strips. The prices of cases given below do not include the boards.

Brass-Bound Press Boards and Case.

BRONZING MITTEN

Convenient for bronzing. Made of sheep's wool, with backs of strong cloth; made impervious to bronze.

Price, each\$0.50

BRONZING PAD

Receives the bronze in a cavity on top (which is closed tightly with a slide) and delivers it through valves which are opened and closed by the thumbscrew at the end, which regulates the flow of bronze onto a sieve in the midst of fine fur. The bronze is fed only as fast as wanted, and just where wanted on the work, and not over the whole table. No bronze escapes except on the work being done, and a large quantity usually wasted is thus saved.

Large, 2 1/2 x 6 inches.....\$2.50
Small, 2 1/2 inches square, for light work 1.50

GALLEY CABINETS

No. 3 Galley Top Cabinet with Paneled Ends

No. 9 Flat Top Galley Cabinet with Flat Ends and Number Plates attached

Hamilton Galley Cabinets have proved their worth by actual tests covering a period of twenty-five years. Thousands are in use in the best printing offices throughout the United States and foreign countries. The severe strain to which a Galley Cabinet is subjected when filled with loaded Galleys is fully realized, and their construction is such as to enable the manufacturers to give an absolute guarantee that every Galley Cabinet of their make, large or small, will remain firm and rigid for an indefinite period. They are made of selected hardwoods throughout from well seasoned stock and finished like the best grades of printers' Cabinets.

List Prices and Dimensions of Galley Cabinets

NO.	TIERS	STYLE	CAPACITY	OUTSIDE DIMENSIONS			WEIGHT POUNDS	PRICE	EXTRA WITH NUMBER PLATES

No. 10	2	Flat Top	60 Double Galleys	62	21½	26½	290	22.00	3.00

The efficiency of a Galley Cabinet is greatly increased by having the Galley Shelves numbered consecutively. This feature, as noticed by the price list above, is provided at a small addition to the list price. Number Plates add system to the Galley equipment.

INK AND ROLLER CABINETS

A very necessary article of printing office furniture. The use of it will result in a saving of ink and rollers, which will quickly pay for the Cabinet.

- No. 1—With shelf for ink, shelf for brayers and slab, and Brackets to hold 6 eighth and 6 quarto rollers. Weight, 75 pounds. Height, 36½ inches; width, 27½ inches; depth, 15 inches, outside. Price \$ 6.50
- No. 2—With shelf for ink, shelf for brayers and slab, and Brackets for 6 each, eighth, quarto and half medium rollers. Weight, 100 pounds. Height, 36½ inches; width, 33½ inches; depth, 15 inches, outside. Price 9.50
- No. 3—With shelf for ink, shelf for brayers and slab, and Brackets to hold 12 each, eighth, quarto and half medium rollers. Weight, 135 pounds. Height, 48½ inches; width, 33½ inches; depth, 15 inches, outside. Price 13.00

POLHEMUS CABINETS

Concentrate the Type Case Equipment into the Smallest Possible Floor Space. At the Same Time it Gives More Room and Relieves the Congestion.

Back View of Triple Polhemus Cabinets

The object of the Polhemus Cabinet is to save time and space. Time is lost on the ordinary Cabinets by standing the compositor in front of twenty cases, all frequently in use by other men. In the Polhemus Cabinets the Job Cases are unobstructed and the compositor stands at the back, where he cannot be interrupted. Every inch of space on the Polhemus Cabinets is utilized to advantage. The Galley Top or Bank is a most useful addition; the space between the cases is used as a Galley Cabinet or Sort Cabinet, as may be preferred; the top is flat and tied-up matter may be kept on it as the iron Case Brackets admit of easy access to the space under the Case and Galley Top. The Brackets which hold the cases project into the alley eight inches, giving the compositor plenty of knee-room, while saving floor space. In construction our Polhemus Cabinets are unsurpassed in solidity, appearance and finish. They are made of hard-wood, nicely polished and no handsomer Cabinets have been offered to the craft.

Front View of No. 4 Triple Polhemus Cabinet

This Cabinet is a veritable printing office in itself. Contains 75 cases; 10 sort drawers; storage room for 20 double-column Galleys; 15 square feet of storage in the Galley Dump for tied-up matter and standing forms; 3 pair New Cases on top. Six men can work at this Cabinet at the same time without interfering—3 job men and 3 news compositors. The practical value of this splendid Cabinet is greatly enhanced by brass lining the full length Galley Dump shown in the illustration. With such a bank no moisture can enter the woodwork and the life of the Cabinet is prolonged indefinitely.

POLHEMUS CABINETS

Excel Other Cabinets, Because They Utilize Space to Best Advantage, Combine Every Possible Convenience, and Prevent Waste of Time

No. 6 Double Polhemus Cabinet

This Cabinet possesses all the distinctive features of other Polhemus Cabinets, except the tier of sort Drawers or Galley Cabinet between the two tiers of Cases. By this omission space enough is gained to allow room for two tiers of full size Cases. This arrangement is preferred by those printers having an ample supply of sort Cabinets and Galley Cabinets. It utilizes the entire capacity of the Cabinet for laying fonts of type. The floor space occupied is the same as other double Polhemus Cabinets. It embraces the limit of Case concentration, having 25 Cases in each tier within working height.

No. 1 Double Polhemus Cabinet with Wood Runs, containing 18 full size California Job Cases in one tier, and 20 two-third size California Job Cases in one tier, two pairs of News Cases and two pairs of No. 1 Hamilton Patent Tilting Brackets on top. Nos. 1, 5, 6, 8 and 9.....	\$24.00
Nos. 3 and 4.....	\$35.00

CABINETS GRAND

The Acme of Type Cabinet Construction. Embracing all the Distinctive Features of other Type Cabinets, in Addition to Special Features not Embodied in Other Cabinets.

No. 20 Cabinet Grand—Rear View

No. 21 Cabinet Grand—Rear View

In presenting this new line of improved Extension Front Cabinets, which is designated as Cabinets Grand, we do so with complete confidence that the manufacturers are offering the best and most complete Printers' Type Cabinet ever devised. Embracing as it does every distinctive feature of other popular Type Cabinets, it also embodies the use of the new Three-Case Tilting Brackets, the Bettis Lead and Slug Case No. 8, and the Thirty-inch Space and Quad Case, a combination of labor-saving arrangement for job and news composition which it would be difficult to excel.

The Cabinets Grand have the Porter Extension Front, which is the one distinctive feature of the patented Porter Cabinet. They have the flat Steel Runs and Interlocking Rods passing through the runs and dividing strips.

The Cabinets Grand also accommodate the job and news compositors on opposite sides, and have the full length Galley Dump, which are the distinctive features of the Polhemus Cabinets.

All of these advantageous features, long tried and universally approved by progressive printers, combined with the Lead and Slug Bank, Thirty-inch Space and Quad Case, and the reversing of the Sort Drawers and Galley Rack to the news side of the Cabinet, completes the combination and makes a Type Cabinet that is truly Grand from an economical standpoint, and hence the name they have adopted to designate this, their latest and best venture in Type Cabinet construction.

The above illustration shows the front view or job side of the No. 22 Triple Cabinet Grand. The left hand tier of 24 Cases are full size; the center tier of 23 Cases are three-quarter size; the right hand tier of 23 Cases are two-thirds size. The top equipment is supported by three pairs of No. 2 Three-Case Tilting Brackets. Over the Job Cases there is a No. 8 Bettis Lead and Slug Case. The working bank at the front of this Case will take a 10 x 24 inch Galley. This working space is five-eighths of an inch deep. At the back of this Bettis Case are the lead and slug compartments in duplicate. These compartments are 1 1/4 inches deep. A Blank Case holds the Thirty-inch Space and Quad Case and the Brass Galley. Three pairs of News Cases face opposite to the job side.

CABINETS GRAND

No. 22 Cabinet Grand

- No. 20 contains a total of 47 California Job Cases, arranged in two tiers, as follows: 7 full size Cases 1 inch deep; 3 two-third size Cases 1 inch deep; 14 full size Cases 1½ inches deep; 17 two-third size Cases 1½ inches deep; 3 full size Cases 1½ inches deep; 3 two-third size Cases 1½ inches deep, also ten Sort Drawers between the two tiers of Cases. Height, 43 inches; width, 71 inches; depth, 27 inches. Weight, crated for shipment, 700 pounds. Price, complete.....100.00
- No. 22 contains a total of 70 California Job Cases, arranged in three tiers, as follows: 7 full size Cases 1 inch deep; 3 three-quarter size Cases 1 inch deep; 14 full size Cases 1½ inches deep; 17 three-quarter size Cases 1½ inches deep; 3 three-quarter size Cases 1½ inches deep; 3 three-quarter size Cases 1½ inches deep; 3 two-third size Cases 1 inch deep; 17 two-third size Cases 1½ inches deep; 3 two-third size Cases 1½ inches deep, also 10 Sort Drawers between the two tiers of Cases and 16 Galley Shelves, enclosed by door, opening from the news side of the Cabinet. The top equipment comprises three pairs of No. 2 Three-Case Hamilton Patent Tilting Brackets, with Galley Boards, three pairs of News Cases, one Blank Case, one Thirty-inch Space and Quad Case, one No. 8 Bettis Lead and Slug Case. Height, 43 inches; width, 110½ inches; depth, 27 inches. Weight, crated for shipment, 1,200 pounds. Price, complete.....150.00

PAPER AND CARD STOCK CABINETS

We offer here a proper receptacle for high-priced papers and fancy cardboard stock. Such material quickly becomes soiled and unfit for high grade work if exposed to the air and dust. These Cabinets are practically dust proof and the colors will not fade or the quality of the paper deteriorate when stock is stored in them.

No. 1 contains 12 drawers, eight of which are 2 inches deep and four 4½ inches deep. Each drawer will take 28½ x 28 inch stock. Occupies floor space 28½ x 34½ inches. Height, 48 inches. Weight, crated, 340 pounds.

No. 1, Paper and Card Stock Cabinet.....\$37.00

No. 2 contains 12 drawers; eight of which are 2 inches deep and four 4½ inches deep. Each drawer will take 28 x 44 inch stock. Occupies floor space 34½ x 49½ inches. Height, 48 inches. Weight, crated, 400 pounds.

No. 2, Paper and Card Stock Cabinet.....\$48.00

PORTER EXTENSION FRONT CABINETS

Filled with "New Departure" Cases

No. 7 Porter Extension Front Steel Run Cabinet

This Cabinet possesses distinctive features which are found in no other Cabinet, and places it at once at the very front rank of all Cabinets. They have been thoroughly tried by extensive printing establishments in all parts of the world, and all who have used them are enthusiastic in their praise. They have also been adopted in the Government Printing Office, at Washington, D. C. It is a well known fact that nothing goes into that office that is not strictly first-class and of the very best make.

The distinctive feature of this Cabinet is the extension of the front, as shown in the illustration. This enables the compositor to draw any Case well out beyond the other Cases, and makes the back tier of type boxes as accessible as any boxes in the case. It also allows, owing to the absence of extension side rails, the use of Job Cases on the Brackets. These are features found in no other Type Cabinet, and the value will be readily appreciated by every compositor. The extension front also permits the top or bottom Cases to be drawn from their places and placed at the proper height for setting purposes, without partly drawing another Case to be used as a rest.

Combined with the improved Steel Run and the extension front, allowing any Case to be drawn and placed at any convenient height, without using another Case as a rest, the Porter Cabinet has all the excellent features of other Steel Run Cabinets. The depth of the extension front is 4 inches. As these Cabinets are fitted on the 23-Case and 46-Case sizes, with patented Tilting Brackets, they can be attached so that News Cases on top are on the opposite side from the Job Cases, thus acquiring the distinctive and valuable feature of the Polhemus Cabinets. Unless otherwise stated, all Porter Cabinets are filled with California Job Cases.

Cabinets Nos. 6 and 7 have paneled backs. Other Cabinets of this series have plain backs.

WISCONSIN CABINETS

No. 124 Wisconsin Steel Run Cabinet

The merits of the modern Steel Run Cabinets have met with general recognition and the best offices are now being equipped with these economical additions to the printing office. Where rents are high and space is limited these Cabinets are especially recommended. They save twenty-five per cent. in space in the smaller sizes, and by using the high Cabinets containing forty, fifty and sixty Cases the saving is enormous. Space is utilized in the upper part of these high Cabinets that was not occupied before. The same result is obtained by using the high Cabinets that is obtained in the 18-story office building.

The capacity is enormously increased while the ground space occupied remains the same.

The proprietor of a printing office who is so fortunately situated as to be able to gaze from his office window over a broad expanse of unoccupied real estate may not at once grasp the great advantages arising from the use of the modern "sky scraper" Steel Run Cabinet. Mere space does not represent the same amount of money to him that it does to his metropolitan brother.!

How many modern printing offices are crowded below but with lots of room overheads. These Cabinets are especially designed to utilize this space. The Cases are readily accessible? and those at the top of the Cabinet can be brought down to the proper height for type-setting purposes, as shown in the illustration. These Cabinets are furnished in ash finished antique, unless otherwise specified. They are strongly built and will bear the strain to which they will be subjected.

Sky scrapers in Cabinets have come to stay. They are not a fad in any sense of the word. Long before their introduction there was a constant demand for high Cabinets—those containing more Cases than the old so-called stained Cabinets then in use. All this was before the Steel Run had become a factor in printing office furniture. As soon as introduced they were quickly adopted by progressive printers.

All these Steel Run Cabinets are filled with "New Departure" Cases. There is no friction and the Cases cannot cramp. While the price of a Cabinet is higher than the Wisconsin Cabinets with wood runs, there are more cases in a given space and the cost per case is lower than in other Cabinets.

WISCONSIN WINDOW CABINETS

The Wisconsin Window Cabinet differs from other flat top Cabinets in the arrangement of the top, which projects behind 7 inches. Two pair of Brackets are placed so as to face the Cases to the sides. The top is cleated to prevent the projecting top from being broken. The back is paneled.

Designed for placing in front of a window, as it does not obstruct the light. Two men may work undisturbed at the sides, while the Job Cases in front are convenient for the job men.

These Cabinets have the Hamilton Patent Tilting Bracket with Galley Rest, which enables a compositor to empty his stick without leaving the Cabinet, by simply tilting his lower Case, as shown in the cut, thus exposing the galley board.

Made in ash, with antique finish. Bottom is made flush to floor to prevent pi from getting underneath Cabinet.

- No. 1 Wisconsin Window Cabinet, with Wood Runs and filled with 18 full size California Job Cases, 2 pairs of News Cases and 2 pairs of Hamilton's Patent Tilting Brackets No. 1 on top. Weight, 350 lbs. **\$36.00**
- No. 2 With 23 full size California Job Cases and Steel Runs, 2 pairs of News Cases and 2 pairs of Hamilton's Patent Tilting Brackets No. 1 on top. Weight, 375 lbs. **47.00**

Width, 35½ inches; height, 43 inches; depth, 21¼ inches. Weight includes Cases and Brackets on top, crated, ready for shipment.

WISCONSIN CABINETS

With Steel Runs and "New Departure" Cases

There are no better Cabinets made for all-around general use than are represented in the Wisconsin Steel Run Cabinets. They are substantially constructed of selected hardwoods, beautifully finished in antique shade of color, and they will prove an ornament in any office wherever installed. They represent the maximum of case concentration and they are space savers in the fullest sense of the term. All these Cabinets have paneled sides with tastefully moulded edges.

No. 122 Wisconsin Steel Run Cabinet. Flat Top

The one, two and three-tier Wisconsin Steel Run Cabinets with flat tops and holding twenty-five Cases in each tier, can be utilized for body type composition by attaching Case Brackets on top. Accommodating twenty-five Cases in the space usually taken up by eighteen or twenty Cases in the ordinary Cabinet or Stand, saves 25 per cent in the floor space. The capacity of the type Cases, for holding type is not reduced in the least, as regular Cases are used. The saving in space is attained by using the Steel Runs, which allow the Cases to be placed more compactly in the Cabinet.

The proper Brackets to use on the top of a Cabinet 44½ inches in height are as follows:

No. 6, Style A. Double Case Bracket to attach to the edge of the Cabinet. List price, per pair.....\$1.50

No. 7, Style B. Double Case Bracket to set on the flat top. List price, per pair..\$1.25

Hamilton Patent Tilting Bracket No. 1. To set on the flat top. List price, per pair..\$2.00

No. 2. Three Case Tilting Bracket to set on the flat top—takes 18-inch dump at the back. List price, per pair.....\$2.40

No. 4. Three Case Bracket to set on the flat top—takes 18-inch dump at the back. List price, per pair.....\$1.90

For price list and illustrations of all Brackets see page 862.

WISCONSIN CABINETS

With Wood Runs and "New Departure" Cases

No. 27 Galley Top 20-Case Wisconsin Cabinet, with Copy Drawer

Wisconsin Cabinets are all substantially made of selected, thoroughly seasoned hardwood, beautifully finished, sides made with double panels, tastefully moulded. Bottoms are made flush with floor to prevent pi from getting underneath.

The height of the galley top Cabinets is the same at the front as the flat top Cabinets. The backs of galley top Cabinets are 6½ inches higher than given in the list for flat top Cabinets. All galley top Cabinets are supplied with an extra blank copy drawer at the top. This drawer will be found useful for the storage of copy and small tools used on the working bank of galley top Cabinets. It is also useful for the storage of electrotypes and small tied-up forms.

Brackets for use on Flat Top Cabinets

To get the full value of a flat top Cabinet of standard height, Brackets and Cases should be placed on top. The styles of Brackets that work most conveniently with these Cabinets are as follows:

- No. 6 Style A Double Case Bracket, per pair **\$1.50**
- No. 7 Style B Double Case Bracket, per pair **1.25**
- No. 1 Hamilton Patent Tilting Bracket, per pair..... **2.00**
- No. 2 Three Case Tilting Bracket, per pair.. **2.40**
- No. 4 Three Case Bracket, per pair..... **1.90**

When ordering by number state clearly whether flat top or galley top Cabinets are wanted.

HANDY SORT CABINETS

The Handy Sort Cabinets are very compact and will hold an immense amount of material within a small floor space. They are made of hardwood throughout and are nicely finished. Drawers are 8½x20 inches over all and 2½ inches deep inside. Each Drawer is divided into ten compartments, each 3¼x3½x2½ inches inside.

"NEW DEPARTURE" CABINETS

Where Compactness is Essential in Saving Space, We Unqualifiedly Recommend These Cabinets to our Customers.
Guaranteeing them to give Perfect Satisfaction.

No. 68 New Departure Cabinet with Top Equipment

In these days when most modern printing offices are fast outgrowing their present quarters, it is essential that economy of space receive the greatest consideration. A short time ago it was not thought possible to make Type Cabinets with more than 18 Cases in a single tier and have the Cabinets the right height for type-setting purposes. Even this was a great advance over the old style Case Stand which accommodated but 8 or 12 Cases in a single tier.

We now present the "New Departure" Cabinets. These Cabinets, which possess all the advantages of other Cabinets, have the remarkable feature of combining from 25 to 33 Cases within the height of 43 inches, which is the correct height for a Flat Top Cabinet with Cases and Brackets on top

for type-setting purposes. This represents a gain of 33½ per cent in Case capacity over the best Steel Run construction heretofore offered to printers. This result has been made possible by the use of the flat Steel Run which we illustrate. These runs are thin pieces of steel of great strength, fitted into saw-kerfs cut in the sides of the Cabinet and held in place by means of lips on the ends of the Runs, so that such Runs cannot possibly get out of place or become loose. These flat Steel Runs were originated and perfected by the manufacturers more than ten years ago, and have been in continual use in Steel Run Stands since that time. They have given such universal satisfaction that they have decided to incorporate them in a line of modern Steel Run Cabinets, feeling sure that the printers will appreciate this new departure, and will be quick to take advantage of the large saving in Case capacity. Having found that the cost of constructing these Cabinets is somewhat less than the regular Steel Run construction, therefore the prices on these Cabinets are somewhat lower than other Cabinets. The manufacturers, however, guarantee that in points of strength and beauty, the New Departure Cabinets are not surpassed by any other Cabinets.

New Departure Cabinets are constructed of hardwood, finished antique; the ends are tastefully paneled and moulded, and the fronts ornamented and fitted with bronzed pulls. The Cases are of "New Departure" pattern covered with paper on the inside; the paper absorbs the moisture and prevents it from entering the bottom. Top Equipment for No. 68 Cabinet shown above, can be selected as desired. The illustration shows as follows:

The prices quoted above do not include the Top Equipment.

All the above prices and descriptions are for Flat Top Cabinets. If wanted with Galley Tops add to the price given for single tier Cabinets \$3.00, and for double tier Cabinets \$6.00.

All of the New Departure Cabinets listed above, with six exceptions, contain Cases of standard depth, 1½ inches outside the front, and such cases require no further description. The six special Cabinets we describe more particularly below:

No. 51—Contains 33 two-thirds size Cases 16½ x 21½ outside measure. These Cases have a uniform depth of 1 inch outside the front, and are deep enough for all medium and small sizes of metal type without doubling fonts.

No. 57—Contains 33 three-quarter size Cases, size 16½ x 26½ outside measure. These Cases have a uniform depth of 1 inch outside the front, and are deep enough for all medium and small sizes of metal type without doubling fonts.

No. 63—Contains 33 full size Cases, size 16½ x 32½ outside measure. These Cases have a uniform depth of 1 inch outside the front, and are deep enough for all medium and small sizes of metal type without doubling fonts.

No. 64—Contains 28 full size Cases, size 16½ x 32½ outside measure. These Cases are of four different depths; five Cases are ½ inch, ten Cases are 1 inch, ten Cases are Standard, 1½ inches, and three Cases are extra deep, being 1½ inches, all measured outside the front.

No. 69—Is a two-tier Cabinet containing 66 full size Cases, size 16½ x 32½ outside measure. There are 33 Cases in each tier. All these Cases have a uniform depth of 1 inch outside the front, and are deep enough for all medium and small sizes of metal type without doubling fonts.

No. 70—Is a two-tier Cabinet containing 56 full size Cases, size 16½ x 32½ outside measure. There are 28 Cases in each tier of four different depths; five Cases are ½ inch, ten Cases 1 inch, ten Cases are standard, 1½ inches, and three Cases are extra deep, being 1½ inches, all measured outside the front.

All of the six special Cabinets mentioned above have a uniform height of 43 inches which is the correct height for type-setting purposes when Cases and Brackets are placed on top. These Cabinets represent an achievement in Type Case construction never before attained. Heretofore the most compact Cabinets have only contained 25 Cases in the height of 45 inches; here we have Cabinets containing 33 Cases all within the height of 43 inches, and all of the Cases deep enough for practical purposes except for the very largest fonts of metal type. In the two Cabinets, Nos. 64 and 70, containing Cases of four different depths, we have a result of 28 Cases within 43 inches, and some of these Cases are unusually deep, thus accommodating the very largest sizes of metal type.

DORSEY COMPOSITOR'S WORKING CABINET

The sloping top is same size as ordinary lower case. 8-inch flat surface at top for slugs, etc. Two drawers each with two compartments for copy, tools, etc. Five Letter Boards, 21½x24 inches inside, to store forms as completed. Convenient Galley Racks at side to keep galleys off the floor, free from dust and dirt; accommodate four Brass Galleys, as follows: One 15½x22 inches; one 12½x18 inches, and two regulation Single Column Galleys. This is an extremely handy arrangement and the workman has within reach Galleys to accommodate different sizes of work. Under Letter Boards is large open space for storage of cuts in work, personal property of compositor, etc.

This Cabinet is as handsome as it is useful. Beautifully varnished and finished it stimulates personal pride and neatness, and is conducive to better workmanship. Don't make the compositors work on live type Cases in the way of others and compel them to lay out their work on the window, or throw it together without lay-out. This Cabinet is a profitable investment—not an expense. Height, front 45 inches; back 53 inches. Width, 31 inches. Depth, 25 inches. Weight, crated, ready for shipment, including Letter Boards, 300 lbs.

Dorsey Compositor's Working Cabinet.....\$36.00

REVERSIBLE UNIT CABINETS

Unquestionably one of the greatest improvements in Printers' Cabinet construction during recent years has been the addition of the Unit System—a system which has grown and expanded from a small beginning until now it is found in all lines of trade where system has made any material progress. There are many points of superiority in a Unit System over any other construction. It allows of expansion with a small outlay. A single Unit will often provide the additional room required, and the expense involved in the purchase of a complete new Cabinet is avoided. At the same time the Cabinet will always be complete and the general balance of the office equipment will be maintained.

Heretofore the Unit System, so far as printing office furniture is concerned, has not been attempted beyond regular type Cabinet construction. We now offer a line of Units which allows almost unlimited possibilities in the way of different combinations, including Type Case Units of various patterns, Galley Units, Letter-board Units, and Sort Drawer Units. This allows the furniture in any printing office, equipped with these new Reversible Units to be kept at an even balance. If new fonts of type are added, a Unit containing a few type Cases can be ordered.

The fact should not be lost sight of that reversible Units have greater capacity than other type Cabinets, owing to the increased depth from front to back, which is necessary on account of the 24-inch depth being required for Galley Cabinets, so as to accommodate full length standard 24-inch galleys. This increases the capacity of the type Cases and allows shallower Cases to be used without reducing the standard capacity of a type Case. It allows more Cases to be placed in a standard height of 48 inches for type setting purposes. It condenses a large amount of material into a small space and one Reversible Unit Cabinet will often take care of all of the material that would require two Cabinets of ordinary construction to hold.

Reversible Unit Cabinet Combination No. 4 is made by combining 2 Units No. 22, each containing seven Letter Boards. 1 Unit No. 10, containing 12 large California Job Cases, standard depth. 1 Unit No. 11, containing 15 large California Job Cases $\frac{1}{2}$ inch deep inside the rail. 2 No. 1 Banks, 2 Cap pieces and 2 Base pieces, 2 pairs of Tilting Brackets and 2 pairs of News Cases on Brackets.

Two Units with Cap and Base make a Cabinet 49 $\frac{1}{2}$ inches high, Three Units with Cap and Base will make a Cabinet 62 $\frac{1}{2}$ inches high. Four Units with Cap and Base will make a Cabinet 80 $\frac{1}{2}$ inches high. The price of Unit No. 20 includes the removable sort boxes, 14 for each drawer; or 336 separate boxes for each Unit.

REVERSIBLE UNITS

Reversible Unit Nos. 12 and 14

Reversible Unit No. 12 is fitted with 24 of the half size Wells Job Cases. The size of these cases is $21\frac{1}{2} \times 15\frac{1}{2}$ inches outside. In this Unit the cases are all standard depth. Compared with the regular size are about 10 per cent smaller. The cases in this Unit will easily take medium and large sizes of cap and figure fonts. Unit No. 14 externally the same as Unit No. 12, but fitted with 24 half size Yankee Job Cases, which will conveniently hold all small and medium size cap, lower case and figure fonts.

Reversible Unit No. 16

Unlike the other Units of this series, the cases pull from both ends. By adding one of these Units to a cabinet, the arrangement can be such as to have cases pull from the four sides of the cabinet. Holds 22 California Job Cases, size $15\frac{1}{2} \times 21\frac{1}{2}$ inches outside, being but a trifle smaller in size than a standard two-thirds case. Unit No. 17 is identical with this except containing 28 cases of similar pattern, but shallower. Such cases easily take all small and medium fonts of caps, lower case and figures.

Reversible Unit No. 20

This Unit is fitted with 24 Sort Drawers, each sort drawer being filled with 14 removable sort boxes. The size of each sort box is $2\frac{3}{4} \times 2\frac{3}{4} \times 2\frac{1}{2}$ inches inside. The side rails of the drawers are cut away, leaving the sort boxes projecting above the rails, which allows their easy removal. Each box will hold $1\frac{1}{2}$ pounds of sorts. Each drawer will hold $17\frac{1}{2}$ pounds and each Unit will hold 420 pounds of type.

Reversible Unit No. 10

Each Unit of this pattern is fitted with 12 of the large California Job Cases of standard depth. Size of these cases is $32\frac{1}{2} \times 21\frac{1}{2}$ inches outside measure. The cases in this Unit will easily take the very largest cap, lower case and figure fonts without crowding. No other type case has a like capacity.

Reversible Unit No. 22

This Unit is fitted with 7 large Letter-Boards, size of each board $22 \times 30\frac{1}{2}$ inches inside, with one-half inch lip at front to receive the brass galleys. Provides 32 square feet of letter board surface in each Unit for the convenient storage of standing forms and tied up matter.

Reversible Unit No. 21

This Unit has four tiers of Galley shelves, each tier taking nine galleys, or 36 galleys to the Unit. Three tiers are for double column galleys, having a width of $8\frac{1}{2}$ inches in the clear. One tier takes single column galleys having a width of 6 inches.

REVERSIBLE UNIT

Reversible Unit Bank No. 1

Length 35 in.; width 17 in., outside measure. Divided into three equal spaces, each space 4 $\frac{1}{2}$ x33 in. inside. This Bank makes a convenient working space and provides storage room for standing jobs. It is intended to be used at the back of a pair of Case Brackets holding a pair of News Cases.

Price, \$3.00

Reversible Unit Bank No. 2

Length, 35 in.; Width, 28 $\frac{1}{2}$ in., outside measure. It has a working space at the front 33x16 $\frac{1}{2}$ in., inside measure. Back of the working space is an adjustable lead and slug rack divided into two sections, each section 4 $\frac{1}{2}$ in. wide. The working space at the front will take a Job Galley 16x24 inches in size.

Price, \$6.00

WOOD TYPE CABINETS

No. 9 Mammoth Wood Type Cabinet

These Cabinets furnish the most economical method of keeping Wood Type. The Type is preserved and kept free from dust, and at the same time every letter is available without disturbing others. The No. 9 Cabinet shown here occupies but 9 square feet of floor space and affords 140 square feet of case surface for the systematic storage of Wood Type.

Wood Type Cabinets are made to hold two sizes of Cases, viz.: Nos. 1, 2, 3, 7 and 8, to hold Cases 23 x 32 $\frac{1}{2}$ and known as the Regular Wood Type Cabinet, while Nos. 4, 5, 6, 9 and 10 are made to hold Cases 23 x 44, and this size is known as the Mammoth Wood Type Cabinet. They are very substantially constructed of ash finished in antique oak. The Cases are slotted on the sides and have movable strips which may be adjusted to picas. The Cases in the Mammoth size (23x44) have a center bar as shown in the illustration below, while the Case in the regular Cabinets have no center bar.

Style No. 3. Size 23 x 44 inches

No. 27 Handy Letter Board Cabinet

HANDY LETTER BOARD CABINETS

For Job work these small Letter Board Cabinets are unrivalled. Nos. 25, 26 and 27, in single tier, occupy floor space of 16½ x 19 inches, and are filled with Letter Boards constructed of hardwood throughout. The sides of the Cabinets are tastefully paneled and all exterior surfaces are finished and varnished like the best type Cabinets. They have hardwood tops and are made with closed backs.

HARDWOOD LETTER BOARDS

With and Without Cabinet

These Boards are of standard size, and will fit any regular Case Stand or rack for standard size type Cases. No. 1 is the same length as a two-thirds size Case. No. 2 is the same length as a three-quarter size Case. No. 3 is the same length as a full size Case. They are made of the finest selected hardwood with retaining rims on three sides. These Boards are made to provide for contraction and expansion. Climatic changes do not affect them. Boards can be ordered singly or in lots, and will always be found uniform in size. For the convenience of customers who have no Stand room for the accommodation of these Boards we list them with Cabinets to hold 16 Boards.

DORSEY COMBINATION PRESS ROOM CABINET

The top is covered with plate glass, substituting the old ink slab. Beneath the glass are receptacles for inks, oil cans, tympan paper, etc. Beneath this is a tool drawer 3½ inches deep. Beneath the tool drawer is a V-shaped opening into which spoiled sheets and anything else of a waste-basket nature may be thrown, falling into a deep drawer below, that pulls from the rear side of the cabinet for emptying. Below this drawer is a compartment for old rags.

This rag compartment is lined with metal throughout to effectually obviate all danger should spontaneous combustion take place. This compartment is accessible from both sides of the Cabinet by means of trap doors secured at the bottom with spring hinges.

The Cabinet is mounted on castors and can be pushed about the press room as required.

Weight, crated, ready for shipment, including glass top, 150 pounds. Dorsey Combination Press Room Cabinets.....\$36.00

INDEXED ELECTROTYPE CABINETS

Hamilton Indexed Electrotpe Cabinet No. 15

dently assert that this Cabinet will give thorough satisfaction and soon pay for itself in time saved. They are constructed in three sizes like regular type Cabinets. The three-quarter Drawer is 15 x 24½ inside; the full-size Drawer is 15 x 30½ inside. All Drawers have extension side rails at the back, enabling a Drawer to be fully drawn and making the cuts in the back readily accessible. The prices given are for the Cabinets, fully equipped, ready for use.

This Cut Shows a Drawer

as it appears when divided off and filled with cuts or electrotypes. See part of index showing manner of indexing four of the cuts in the Drawer. Note that every cut is in a distinct compartment, and that the dimensions are arranged in both directions to fit the various sizes of cuts.

The Electrotpe Cabinet Index Book

We give below an illustration of pages from the Index Book. This book is 7½ x 8½ inches, and contains 130 pages. There are 100 pages ruled as below and with an alphabetical margin. The book is neatly printed and ruled and bound in a canvas cover. A comparison of the index given below with the cut of the filled Drawer will show the simplicity of the arrangement. Find the four original wood cuts in drawer 12.

ORIGINAL CUT			NAME OF CUT	OWNER OF CUT OR ELECTROTYPE	DATE OF DELIVERY TO OR ON ORDER OF OWNER	ELECTROTYPES					B
DRAWER	SECTION	DIVISION				DRAWER	SECTION	DIVISIONS			
12	D	3	BICYCLE	SMITH, JONES & CO.	8- 4 1907	31	E	1	2	3	
12	A	2	LAWN MOWER	WAGNER HDW. CO.	6- 3 1907	33	A	4	5	6	
12	E	3	SEWING MACHINE	REMINGTON & CO.	7- 8 1907	35	B	1	2	3	
12	D	4	FACTORY PLANT	HAMILTON MFG. CO.	1-10 1907	30	C	7	8	9	

Explanatory:—The initial of every cut indexed on the sample page above illustrated should properly begin with the letter "B." The cuts mentioned were chosen for the reference because of their visiblens as they lie in the Drawer illustrated.

The 50-Drawer and 60-Drawer Cabinets are furnished in one or two tiers, as desired at the same price.

The above prices include the Cabinets fitted with a full equipment of Division Slats, including 5 of the slotted divisions for each Drawer in the two-thirds size Cabinets, and 6 for each Drawer in the three-quarter and full-size Cabinets; also with a large assortment of cross divisions, in various lengths. Each Drawer is fitted with a metal number plate, as shown in the illustration.

One Indexed Book is furnished for each Cabinet, regardless of the size of the Cabinet. Additional Books, if required, will be furnished for \$1.00 each, list, subject to the same discount that applies on the Cabinet.

ELECTRO AND CUT CABINETS

With Wood Runs and Plain Blank Drawers

These Cabinets are filled with Blank Drawers, and are very handsomely made of ash, antique finish, with bronze Drawer Pulls. In addition to the ordinary uses of the printer, these Cabinets can be recommended to advertisers for keeping their wood cuts, etc., and many other purposes. A two-third Drawer is 15¹/₂ x 20¹/₂ inside; three-quarter is 14¹/₂ x 24¹/₂ inside, and the full-size Drawer is 14¹/₂ x 30¹/₂ inside.

BOOKBINDERS' CABINETS

Made with bronzed pulls on each Case, and highly finished. The Cases are made in exactly the same style as printers' Cases, with tripply bottoms, and are the same size and proportioned like one-half of the regular Cap Case. These Cabinets may be put on or under a bench. "A place for everything and everything in its place" is a rule bookbinders should live up to, and these Cabinets will enable them to do so.

MATRIX CABINETS

Eight-Drawer Linotype Matrix Cabinet

Six metal slugs are furnished with each Drawer in all these Cabinets. These will be found very useful—holding up the ends of lines of matrices and also for separating special characters not always required. These slugs are made the same shape and size of a matrix and $\frac{1}{4}$ inch wide.

Provides a convenient and safe receptacle for the storage of the valuable matrices, space bands and tools which accompany every Linotype outfit. The construction is based on a careful study of the requirements and after the suggestions of practical Linotype experts. No Linotype outfit is complete without one. This is the only practical Cabinet ever made for holding the matrices and other small tools which accompany a Linotype machine. They are firmly and substantially constructed of hardwood, nicely finished. The roll curtain front will effectually exclude the dust, and being provided with a first-class lock insures the contents of the Drawers from being tampered with.

Each Drawer is 14 $\frac{1}{2}$ x 15 inches inside, having ten grooves upon which the matrices are placed edgewise as illustrated below. The capacity of each Drawer is 142 running inches of matrices set edgewise. These Drawers are set in the Cabinet on an incline. This position of the Drawers prevents the matrices from falling down or becoming disarranged when the grooves are not full. The illustration shows the matrices in place, the unfilled lines being held by a metal slug. In the lower part is a Drawer 4 $\frac{1}{2}$ inches deep inside, fitted with a pin lock. This Drawer cannot be opened until the curtain is raised. It will accommodate all the small tools which go with the Linotype machine.

Detailed Section of Matrix Drawer showing Matrices in place

List Prices and Dimensions of Matrix Cabinets

	CAPACITY	TOOL DRAWER	HEIGHT INCHES	WIDTH INCHES	DEPTH INCHES	WEIGHT POUNDS	PRICE
No. 1	6 Drawers—for 1 or 2 machines	1	30 $\frac{1}{2}$	18	20 $\frac{1}{2}$	150	\$22.00

MONOTYPE CABINETS

The door of this Cabinet is arranged with holders for the various wrenches, screw-drivers and gauges furnished with the machine.

The Molds are kept in two sliding trays at the top of the Cabinet; each holds six Molds in such a manner that it is impossible for them to strike. Beneath these trays are two shelves for Normal wedges; each shelf holds fifteen wedges, and each wedge has its particular place where it is protected from injury and where it may be quickly found. Two additional shelves provide for twenty-eight Matrix Cases; each case being held on edge and prevented from striking the other Cases. Beneath these shelves are four Drawers for individual Matrices; each Drawer is divided in thirty-seven grooves, in which the Matrices are stood on end. A bar across the center of each Drawer divides it so that Matrices taken from the Matrix Case, in making changes are put above the bar in the same groove from which the Matrices below the bar are taken to replace those removed from the Matrix Case.

Height, 25 $\frac{1}{2}$ inches; width, 14 inches; depth, 16 inches; weight, ready for shipment, 75 pounds.
Monotype Cabinet.....\$22.00

SPECIMEN CABINETS

No. 1 Specimen Cabinet contains 8 drawers with inside dimensions $15\frac{1}{2}$ x 20 inches. Four of these drawers are 2 inches deep and four are $4\frac{1}{2}$ inches deep inside. This Cabinet occupies floor space $20\frac{1}{2}$ x $25\frac{1}{2}$ inches. The height is $37\frac{1}{2}$ inches. It is made of ash and is nicely finished. Each drawer is divided into nine compartments, with removable partitions. Weight, crated for shipment, 165 pounds.

No. 1 Specimen Cabinet \$22.00

No. 2 Specimen Cabinet contains 12 drawers with inside dimensions $15\frac{1}{2}$ x 20 inches. Six of these drawers are 2 inches deep and six are $4\frac{1}{2}$ inches deep inside. This Cabinet occupies floor space $20\frac{1}{2}$ x $25\frac{1}{2}$ inches. The height is $52\frac{1}{2}$ inches. It is made of ash and nicely finished. Each drawer is divided into nine compartments with removable partitions. Weight, crated for shipment, 200 pounds.

No. 2 Specimen Cabinet \$32.00

AD-MAN'S CABINET

This Cabinet is designed to meet the requirements of the ad-man who must necessarily have recourse to an abundance and great variety of material. The aim is to place all this material directly before the workman in the most convenient form. The two tiers of cases and other equipment are reversed, both sides of the Cabinet being alike. When two ad-men are working at the Cabinet, one on each side, they occupy the same position and each has the material in the same form. A two-faced Lead and Slug Bank is supported by uprights over the working top; this Bank has adjustable partitions providing separate compartments on each side for leads and slugs. This entire Lead and Slug Bank can be raised or lowered six inches. Four men can work at the Cabinet on straight work without interference, two on each side. The ad-man places his type case at the right hand end of the working top. He will have before him within reach his leads and slugs. At his left on the working top he will place a large dumping galley; his copy drawer will be directly under the working type case; under the copy drawer on the supplementary bank he can place another dumping galley. The Cabinet is fully equipped with electric lights, mortised label holders and foot rails, which are listed as extras. The inverted V-shaped Lead and Slug Bank has electric lights arranged inside where the direct rays will not reach the workman's eyes; the light will be thrown down and evenly diffused over the entire working top. The inside surface is lined with bright tin serving as a reflector.

Occupies floor space $13\frac{1}{2}$ x $70\frac{1}{2}$ inches. Height to apex of Cabinet proper, 53 inches. Height to apex of Adjustable Lead and Slug Bank—maximum, 74 inches; minimum, 68 inches. Weight, crated for shipment, 950 pounds.

Cabinet No. 1—24 regular cases in each tier \$120.00

Cabinet No. 2—22 extra deep cases in each tier 120.00

Extras—Electric light equipment complete for attachment, including sockets, shades, switch and elongated lamps over each tier of cases and under the Lead and Slug Bank \$15.00. Mortised Label Holders with celluloid covers, 6 cents each; Cabinet No. 1, \$2.88. Cabinet No. 2, \$2.64. Two Foot Rails, \$7.00.

SUPERIOR ALL-IRON CASE STANDS

Barnhart's Iron Case Stands are used more and more. They have advantages in durability; in freedom from wear and defacement; in easy cleansing and sanitation. They give a lighter and neater appearance to the composing room. They occupy a few inches less space than wood, and where necessary to crowd this is something worth more than the increased cost. They can be furnished in any desired way to accommodate any possible number of cases, or in combination with galley racks, etc. Barnhart's Iron Case Racks are of various capacities, reasonable cost and economical in space.

Extra runs riveted to stands, 40 cents per pair additional. Estimates and drawings of special sizes furnished upon application.

NO. 21 STEEL RUN STANDS

News Compositors' Side

Job Compositors' Side

This is the cheapest of all Steel Run Stands. It represents the maximum of case capacity. It is strongly made and durable, and will prove economical wherever installed.

This frame is made with flat top and requires Case Brackets to hold the News Cases. The Job Cases can be put into the Racks from either side of the Frame, and the Steel Runs are placed so close together as to require Pulls on the fronts of the Job Cases to get the best results. Regular cases can be put into the Racks without planing off the fronts. It has capacity for 40 Cases under the top. Brackets and Cases for the top can be selected to meet the requirements.

The top equipment illustrated is as follows:—Two pair No. 2 Three-Case Tilting Brackets, one pair News Cases, two Blank Cases, one Thirty-inch Space and Quad Case, one No. 8 Bettis Lead and Slug Case, and four Quarter Cases as follows:—Ideal Brass Leader Case, Compact Rule Case, Time Table Quarter Case, Wisconsin Quarter Case, Style C.

List Prices of No 21 Steel Run Stand and Equipment

Stand only, open front. Weight, 215 pounds.....	\$20.00
Stand only, closed plain front. Weight, 260 pounds.....	23.50
Stand only, closed paneled front. Weight, 255 pounds.....	25.00

Above prices are for stand only, and do not include the Cases in the body of the frame or the News Cases on the top. Selection of Case equipment can be made as requirements demand. Case Pulls can be furnished in bulk to attach to the fronts of old Cases for 4 cents each, list.

NO. 22 STEEL RUN STAND

The No. 22 Steel Run Stand requires no Brackets, as it is built with a top to hold News Cases. The Job Cases are put in from the back, as the illustration shows. There is ample knee room for the news compositor, as the Cases do not come to a line of the front of the Stand, but set back about five inches as shown. Regular full size lip Cases can be used in all of these Stands, and there will be ample finger room between Cases, so that Pulls will not be required. However, the withdrawing of the Job Cases will be facilitated by attaching Pulls to the Case fronts.

CAPACITY, 32 FULL SIZE CASES	HEIGHT FRONT	WEIGHT POUNDS	FLOOR SPACE, IN.	PRICE
Open Front.....	44½ in.	285	26 x 70	\$25.00
Closed Plain Front....	44½ in.	380	26 x 70	28.50
Closed Paneled Front.	44½ in.	320	26 x 70	30.00

Above prices are for Stand only and do not include the Cases in the body of the frame or the News Cases on top. Selection of Case equipment can be made as requirements demand.

Case Pulls can be furnished in bulk to attach to the fronts of old Cases for 4 cents each, list.

NO. 23 STEEL RUN STAND

Job Side, showing full length Galley Dump

News Side, showing Paneled Front

This Frame is very similar to the No. 22 Steel Run Stand, but has Copy Drawers under the News Cases and full length Dump over the Job Cases. It also has other points of superiority and is most substantially and compactly built. This Stand, made with paneled front or closed plain front, is about as good an article as could possibly be devised for the composing room. The news compositors and the job compositors are placed on opposite sides and there will be no interference. Four men can work continuously at the same Stand, two on each side. Made of selected hardwoods and finished like the best grades of Cabinets. These modern Steel Run Stands really belong to the Cabinet class, and when filled with Cases and fully equipped they compare in every respect with the best of Cabinets. The No. 23 Stand will take 32 full size lip Cases arranged in two tiers, 16 Cases in each tier.

The No. 23 Steel Run Stand requires no Case Brackets, as it is built with a top to hold News Cases. The Job Cases are put in from the back, as the illustration shows. There is ample knee room on the side for the News Compositors, as the Cases do not come to a line on the front of the Stand, but set back about five inches as shown. Regular full size lip Cases can be used in all of these Stands, and there will be ample finger room between Cases, so that pulls will not be required. However, the withdrawing of the Job Cases will be facilitated by attaching pulls to the Case fronts.

CAPACITY, 32 FULL SIZE CASES	FLOOR SPACE INCHES	HEIGHT FRONT	WEIGHT POUNDS	PRICE
Open front.....	26 x 70	44½ in.	300	\$30.00
Closed plain front.....	26 x 70	44½ in.	345	33.50
Closed paneled front.....	26 x 70	44½ in.	340	35.00

Above prices are for the Stand only and do not include the Cases in the body of the Cabinet or the News Cases on top. Selection of Case equipment can be made as requirements demand.

Case Pulls can be furnished in bulk to attach to the fronts of old Cases at 4 cents each, list.

THE POLHEMUS STAND

The news compositor stands behind the Job Cases, where he works without being interrupted by the job men. He can empty his stick without leaving the Stand, on a Galley kept under the Lower Case, as the top Cases are held on Hamilton's Patent Tilting Brackets. Over the Job Cases there is a working bank or a galley top, for keeping live or dead matter. Between the Case racks on the No. 3 Stand there is a Galley Cabinet, shown in the illustration.

- No. 1 Single, with Racks for 12 full size Cases; weight with Brackets, 100 lbs.; occupies floor space 20½x36 inches. Price.....\$ 7.50
- No. 2 Double, with Racks for 24 full size Cases, and no Galley Cabinet; weight, 180 lbs.; occupies floor space 26x70½ inches. Price..... 13.00
- No. 3 Double, with Racks for 12 full size Cases, and 12 two-thirds Cases, with Galley Cabinet; weight, 250 lbs.; occupies floor space 26½x71½ inches. Price.. 20.00

The prices given above include the Brackets but not the Cases on the Brackets or in the body of the stand. Polhemus Stands are crated and shipped in knock-down form.

NO. 24 STEEL RUN STAND

News Compositors Side

Job Compositors Side

This excellent piece of Cabinet work, when fully equipped with "New Departure" Cases, represents the acme of Steel Run Stand construction, and the most advanced type of composing room equipment. The ends are paneled with neatly moulded edges. The back has seven panels with chamfered edges like a Polhemus Cabinet. The front rail is set back several inches, and the Job Cases when in place, set back several inches from the front, providing the extension front feature of the Porter Cabinets. This allows plenty of knee room for the compositor. Constructed of hardwood throughout, with all exterior surfaces nicely varnished like the best of Cabinets. The runs are of flat steel capable of sustaining great weight.

The top equipment illustrated is as follows:—Two pairs of No. 4 Three-Case Brackets; one pair of News Cases; two Blank Cases; one No. 8 Bettis Lead and Slug Case, and four quarter size Cases as follows:—One Perfection Rule Case, one Compact Rule Case, one All-Right Space and Quad Case, one Wisconsin quarter Case, Style D. Under the top there are Steel Runs to accommodate 40 full size Cases.

The series of illustrations shown on the following pages, gives a uniform lay for all standard Type Cases. There has always been more or less diversity of opinion among printers in regard to the location of certain odd characters, fractions, and diacritical marks. After much investigation, we adopted the various lays, as embodied in the illustrations, and we hope they will prove an assistance, especially to young printers.

"NEW DEPARTURE" CASES

Cap Case, 80c

The old standard and universally used Cap Case. All boxes same size.

Lower Case, 80c

The universal lay as put into the regular Lower Case from which every printer has learned his a-b-c's.

California Job Case, 90c

Most popular of all Job Cases. Note the large Cap boxes Used exclusively in all our type Cabinets unless otherwise ordered.

Italic Job Case, 90c

Old standard Job Case, universally used before the introduction of the California Job Case. Convenient for fonts with accented letters.

Triple Case, 90c

A most useful and popular Case. Will take three fonts of caps, figures and points.

Quadruple Case \$1.20

Very useful for certain fonts. It is a double Cap Case Holds four fonts caps, figures and points.

Two Rivers Cap Case, 90c

A sensible Cap Case now coming into general use. Large cap boxes, 2 3/4 x 3 inches. Worth a dozen regular Cap Cases. Copy covers least used characters. Economical.

Double Lower Case, \$1.20

For holding two fonts of caps and figures; or caps, lower case and double font of figures; or a font each of roman and bold face.

"NEW DEPARTURE" CASES

Improved Job Case, \$1.20

The only Case combining all the boxes found in a regular pair of News Cases. Takes caps, small caps and lower case with figures.

Spaceless Job Case, \$1.00

The Spaceless Job Case should be a twin companion to the Space and Quad Case. All space and quad boxes omitted.

Yankee Job Case, \$1.00

The cap boxes in this Case are placed at the back instead of the right side. A popular case in two-thirds and three-quarter sizes.

Double Yankee Job Case, \$1.20

A very useful Case. Accommodates two complete fonts of caps, lower case, figures and points. Size of boxes allows ample finger room.

Wells Job Case, \$1.00

Holds two fonts of caps and figures. Large boxes insuring large capacity. Cap boxes one-third larger than those in a News Case.

Dearing Job Case, \$1.00

For large sizes of type. Has greater capacity than any other Job Case. Lower case boxes extra large.

Improved New York Job Case, \$1.00

Holds cap, small cap, lower case and figure fonts. Cap side California style with five rows of boxes.

Patterson Job Case, \$1.00

Like the New York Case, this is designed to hold cap, small cap, lower case and figure fonts.

"NEW DEPARTURE" CASES

Russel Tabular Job Case, \$1.80

Has separate series of boxes for odd characters and diacritical marks, brass rule and brass leaders, piece fractions, quads and spaces, fractions, etc. Large boxes for main figures.

Combination Job Case, \$1.20

For use in legal blank and similar work. Holds brass leaders from 1 to 16 ems, half ems from 1 to 5. Will hold a 25-pound font of type, and a 12-pound font of brass leaders.

Dearing Accent Case, \$1.50

Five sections for caps, small caps and lower case of Romans, and caps and lower case of Italics. Extra boxes at front for Spanish, French and Portuguese accents.

Hamilton Job Case, 90c

Accommodates large size cap and figure fonts of metal type, and small sizes of wood type. Holds one font caps, figures and points. Cap boxes 2 1/4 x 4 3/4 inches.

Border Case, \$1.25

A roomy case of large capacity for all sizes of borders.

Music Case—Upper, \$1.00

Music Compositors will find these illustrations of great service in laying type. If the lettering is not distinct, use a hand glass.

Music Case—Lower, \$1.00

Music Case—Side, \$1.00

"NEW DEPARTURE" CASES

Figure Case, \$1.00

A necessity in every large office. Takes extra large supply of figures and fractions. Can be furnished double depth.

Byerly Figure Case, \$1.10

An improved figure case of great value. Figure boxes $2\frac{1}{4} \times 4\frac{1}{4}$ inches. Fraction boxes $2\frac{1}{4} \times 1\frac{1}{8}$ inches.

German Cap Case, 80c

Same as the regular Cap Case. The illustration simply shows how the German characters should be laid.

German Lower Case, 80c

This case is the same as the regular Lower Case with the exception of the double "s" boxes, as shown.

No. 1 Adjustable Lead and Slug Case, \$1.50
(Single depth)

Can be adjusted by picas to meet any requirement and furnished also in double depth if desired.

No. 2 Adjustable Lead and Slug Case, \$2.75
(Double depth)

Center bar adds both strength and utility. Furnished in either single or double depth as desired.

Two Rivers Lead and Slug Case, \$1.75

A new and most valuable Case. Takes length from 4 to $25\frac{1}{4}$ with variations by half picas.

Hamilton Lead and Slug Case, \$1.00

Leads and slugs can be stacked two tiers deep. Can be had in double depth, if desired.

"NEW DEPARTURE" CASES

Improved Space and Quad Case, \$1.00

A slight modification of the old Space and Quad Case which we no longer list. Furnished on all orders for regular Space and Quad Cases.

Practical Space and Quad Case, \$1.10

Provides for half-point and one-point spaces without the necessity of mixing. Accommodates seven sizes of spaces and quads.

Rule Case, (Ordinary) **\$1.15**

The old style full-sized Brass Rule Case. Many printers now prefer the new Quarter-size Rule Cases shown on following pages.

Furneaux Rule Case, \$1.40

This Case will hold two large fonts of rule.

Neshota Rule Case, \$2.00

Takes a larger number of lengths than any other Rule Case. All lengths from 1 to 50 picas, with the usual half pica length and places for mitred pieces.

Zenobia Rule Case, \$1.50

Holds fewer sizes and larger fonts than the Neshota. Takes all lengths up to 36 ems. A very useful and popular Rule Case in the larger composing rooms.

Metal Furniture Case, \$1.50

Compartments for each length as shown. Furnished in single or double depth. A single depth Case will take two layers of furniture, a double depth Case three layers.

Wood Type Case No. 1, 90c

Graduated by picas on the ends. Strips can be adjusted to fit any size of wood type. Six strips go with each Case.

"NEW DEPARTURE" CASES

Italic Job and California Job Case, 75c
The standard two-thirds Case for all Cabinets.

Dearing Job Case, 75c
The largest capacity of any two-thirds Case.

Yankee Job Case, 75c
The most popular of all two-third Cases.

Spaceless Job Case, 80c
Two-thirds size.
Boxes for spaces and quads are omitted from this case.

Hamilton Lead and Slug Case, 75c
Two-thirds size.

Separate compartments by picas, for lengths 4 to 25 picas inclusive.

Brass Leader Case, 75c
Two-thirds size.

Compartments for lengths 1 to 25 picas. Half ems 1 1/2 to 9 1/2 picas.

Improved Job Case, 90c
Two-thirds size.

An odd size, 2 1/4 x 1 1/4 inches. Fits regular two-third Case Rack. Takes caps, small caps, lower case and figures.

California Job Case. Three-quarter size, 85c

All three-quarter Cases listed, are made in the same form and arrangement as the full size of the corresponding styles.

QUARTER SIZE AND SPECIAL CASES

Carpenter Quarter Case

This Case is most useful in tabular and other intricate work. It is a vertical Figure Case with double spaces for 5's and ciphers—the figures most used—and compartments for justifying material and special sorts. Size, 7½ x 15½ inches. Weight, 17 ounces.

Carpenter Quarter Case.....\$0.75

All Right Space and Quad Case

Has compartments for ½ point thin copper and 1 point thin brass spaces also compartments for 3, 4, 5 and 6 em spaces, em quads, en quads, 2 and 3 em quads. Case will hold a Standard 10-pound font of spaces and quads of any size. Size, 7½ x 15½ inches. Weight, 15 ounces.

All Right Space and Quad Case.....\$0.75

Happy Border Case

The partitions in this Case are adjustable by picas the long way and by 6 points from front to back. Eight long slotted divisions and an assortment of short divisions in various lengths accompany each Case. Size, 7½ x 15½ inches. Weight, 22 ounces.

Happy Border Case.....\$1.25

Ideal Brass Leader Case

Designed to hold ordinary 5 and 10-pound fonts of brass leaders. Has compartments for all lengths from one to twenty-two ems, variations by one-half picas from 1 to 10 and by full picas from 10 to 22. Size, 7½ x 15½ inches. Weight, 17 ounces.

Ideal Brass Leader Case.....\$0.90

Time Table Quarter Case

The special compartments for A. M. and P. M. This Case can be made useful in other work, such as legal notices, market reports, etc. Size, 7½ x 15½ inches. Weight, 17 ounces.

Time Table Quarter Case.....\$0.75

Space Rule Case

Designed to take Standard Fonts of Space Rules. Made in three sections each taking a one pound font in any size from 1 to 12 points. Three one-pound fonts of any one size or three separate fonts of different sizes will just fill the Case. Size, 4½ x 6½ inches. Weight, 8 ounces.

Space Rule Case.....\$0.50

Thirty-inch Space and Quad Case

The idea is to use in connection with this Case a Blank Case as a working bank. The Thirty-inch Case is pushed to the rear of the Blank Case, which leaves a clear space at the front 10 inches wide to receive the Brass Galley, Size 4½ x 30 inches, outside. Weight, 21 ounces.

Thirty-inch Space and Quad Case.....\$0.90

THE HARRIS RULE CASES

The series of Harris Rule Cases, quarter-size, and including the Sanspareil Harris Rule Case, one-half size, are in some respects the most economical, efficient and satisfactory Rule Cases ever constructed. The saving in time and space in prolonging the life of the high priced brass rule by always keeping it face up, have made the Harris Cases popular with systematic printers.

Four Harris Rule Cases in a Full Size Blank Case. List Price \$4.65, including the Blank Case

Harris Rule Case No. 1

This Case holds two complete small fonts of labor-saving rule, each weighing 8 pounds, or 16 pounds in all. Each half of this Case holds 18 pieces each length from 1 to 8½ ems (varying by ems), 18 pieces each from 9 to 18 ems (varying by ems), and 9 pieces each 19, 20, 21, 22, 24, 26, and 28 ems, besides boxes for right and left miters. Size 7½ x 15½ inches. Weight, 19 ounces.

No. 1 Harris Rule Case\$1.25

Harris Rule Case No. 2

This Case holds one complete font of 16 pounds weight. It has compartments for 36 pieces each from 1 to 9 ems long (varying by ems), 18 pieces each from 10 to 24 ems (varying by ems), and 18 pieces each of 26, 28, 30, 32, 34, 36 ems long, besides boxes for right and left miters. A large proportion of small lengths. Size 7½ x 15½ inches. Weight, 19 ounces.

No. 2 Harris Rule Case\$1.00

Harris Rule Case No. 3

These two Cases are designed to be used together to hold a font of rule, suitable for a large office, weighing 32 pounds or less. Two and in some cases four boxes are used to hold the most used sizes. Each case has its proportion of the small sizes, so that if it is desired to carry one Case to a compositor's Stand for use in rule work, the other is available in its regular place with a good working font.

Case No. 3 has compartments for all short lengths up to and including the 20 em length. Case No. 4 has compartments for all of the short lengths and also all long lengths up to and including the 36 em lengths. Together these Cases have compartments for 72 pieces each from 1 to 9 ems long (varying by ems), 36 pieces each from 10 to 24 ems long (varying by ems), and 18 pieces each from 25 to 36 ems long (varying by ems), besides boxes for right and left miters. Size, 7½ x 15½ inches. Weight, No. 3, 18 ounces; No. 4, 17 ounces.

No. 3 Harris Rule Case\$0.75

No. 4 Harris Rule Case\$1.00

Harris Rule Case No. 4

HARRIS RULE CASES

Harris Border Case No. 5

In this a compositor may keep his much valued 12 to pica and other thicknesses of leads for justifying purposes, his pickups of dashes, rule, etc. It has boxes from 1 to 9½ ems (varying by ems), from 10 to 22 ems (varying by ems), and from 22 to 28 ems (varying by two ems), with a long box for longer lengths. Size, 7½ x 7½ inches, or ½ inside size of full size Case. Weight, 10 ounces.

Harris Rule Case No. 0

The No. 5 Case may be used in combination with any other Quarter-size Cases, being exactly the same size. To meet the varied requirements of all border and ornament fonts, the short partitions are movable, but are so nicely fitted that they remain in any position in which they are placed. This special and novel feature makes it an easy matter to change the sizes of the boxes at will. Size, 7½ x 15½ inches. Weight, 18 ounces.

SANSAPREIL AND QUARTER-SIZE CASES

This is without doubt one of the best Rule Cases yet designed. The walls and partitions are a trifle higher than type high, so the rules are at all times protected; anything can drop, or be laid on the Case without touching rule.

Sansapreil Harris Rule Case

It has compartments for all sizes from 1 to 9½ ems, (varying by ems), and from 10 to 42, (varying by ems), with an extra allowance for small sizes; also an additional row for miters, which, when no miters are carried, can be used for overflow on small sizes. For large fonts of rule, running in lengths not usually included in fonts of labor-saving brass rule, it is especially valuable, and there is no Case to replace it. It has become very popular and its use is constantly increasing.

The size of this Case is 14½ x 15½ inches—2 Cases fit into one standard Blank Case.

It is compact and every bit of space is utilized, thus insuring a capacity that cannot be equaled by any Case on the market. The cross partitions are one piece of wood from wall to wall, and they cannot slip down or break; the long downward partitions are durable, and the general construction is substantial. It has a "New Depart. ure" bottom. Weight, 38 ounces.

The Sansapreil Harris Rule Case\$1.50

Perfection Rule Case

The Perfection Rule Case has two compartments for all lengths from 1 to 12 ems, and one compartment for lengths from 13 to 36 ems. The variations are by one-half ems from 1 to 10 and by ems from 10 to 36. Four of these Cases will fit into an ordinary Blank Case.

Perfection Rule Case,.....\$0.90

Compact Rule Case

The Compact Rule Case has one compartment for each length from 1 to 36 ems, varying by ems up to 10 ems, and by single ems from 10 to 36 ems. It also has compartments for the miters. Four of these Cases will fit into an ordinary Blank Case.

Compact Rule Case,.....\$0.90

HAMILTON RULE CASES

No. 59 Hamilton Rule Case

No. 61 Hamilton Rule Case

This Case takes a 5-pound font of Standard Rule on 3-point body. Separate compartments are provided for every length from 1 to 26 picas long, inclusive, with separate compartments for miters. Size, $5\frac{1}{4}$ x $11\frac{1}{2}$ inches, outside. Weight, 15 ounces.

No. 59 Hamilton Rule Case\$0.75

This Case takes a 5-pound font of Standard Rule on 6-point body. Separate compartments are provided for every length from 1 to 26 picas long, inclusive, with separate compartments for miters. Size, $5\frac{1}{8}$ x $11\frac{1}{2}$ inches, outside. Weight, 14 ounces.

No. 61 Hamilton Rule Case\$0.75

No. 58 Hamilton Rule Case

No. 70 Hamilton Rule Case

The No. 58 Case takes a 5-pound font of Standard Rule on 2-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for miters. Size, $8\frac{1}{4}$ x $9\frac{1}{4}$ inches, outside. Weight, 15 ounces.

No. 58 Hamilton Rule Case\$0.75

The No. 70 Case takes a 10-pound font of Standard Rule on 6-point body. Separate compartments are provided for every length from 1 to 30 picas long, inclusive, with separate compartments for miters. Size, $9\frac{1}{8}$ x 11 inches, outside. Weight, 19 ounces.

No. 70 Hamilton Rule Case\$1.00

No. 95 Hamilton Rule Case

The No. 95 Case takes a 25-pound font of Standard Rule on 3-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for two sizes of miters. Size, $13\frac{1}{8}$ x $14\frac{1}{2}$ inches, outside. Weight, 34 ounces.

No. 95 Hamilton Rule Case\$1.40

No. 67 Hamilton Rule Case

No. 68 Hamilton Rule Case

This Case takes a 10-pound font of Standard Rule on 2-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for miters. Size, $7\frac{1}{2}$ x $14\frac{1}{2}$ inches, outside. Weight, 24 ounces.

No. 67 Hamilton Rule Case\$1.25

This Case takes a 10-pound font of Standard Rule on 3-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for miters. Size, $8\frac{1}{8}$ x 15 inches, outside. Weight, 28 ounces.

No. 68 Hamilton Rule Case\$1.25

HAMILTON RULE CASES

No. 94 Hamilton Rule Case

This Case takes a 25-pound font of Standard Rule on 2-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for two sizes of miters. Size, 15 $\frac{1}{2}$ x 12 $\frac{1}{2}$ inches, outside. Weight, 33 ounces.

No. 94 Hamilton Rule Case\$1.40

No. 97 Hamilton Rule Case

This case takes a 25-pound font of Standard Rule on 6-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for two sizes of miters. Size, 13 $\frac{1}{2}$ x 16 $\frac{1}{2}$ inches, outside. Weight, 40 ounces.

No. 97 Hamilton Rule Case\$1.40

QUARTER SIZE CASES

Our varied lines of Quarter-size Cases have come into general use and their popularity is steadily increasing. Originally introduced for holding brass rules only, the economical features of these small Cases soon became apparent, and they are now designed for a variety of uses. In use the Quarter Cases with contents can be carried about the office where the work is being executed. This is hardly possible with a full-size Case heavily loaded. Their use preserves high priced material, facilitates its use, enables the compositor to do more and better work. Only one man can work at a full-size Case when filled. A Blank Case filled with four Quarter Cases will accommodate four workmen by removing the Cases and carrying the material to the work.

Wisconsin Quarter Size Case "A"

Convenient for holding figures, spaces and quads, fractions, etc. Size, 7 $\frac{1}{2}$ x 15 $\frac{1}{2}$ inches. Weight, 15 ounces.

Wisconsin Quarter Size Case "A"\$0.65

Wisconsin Quarter Size Case "B"

This pattern is suitable for holding accented letters, split fractions. Size, 7 $\frac{1}{2}$ x 15 $\frac{1}{2}$ inches. Weight, 17 ounces.

Wisconsin Quarter Size Case "B"\$0.65

Wisconsin Quarter Size Case "C"

Large boxes for figures and smaller compartments for fractions. Size, 7 $\frac{1}{2}$ x 15 $\frac{1}{2}$ inches. Weight, 14 ounces.

Wisconsin Quarter Size Case "C"\$0.65

Wisconsin Quarter Size Case "D"

Especially convenient for holding signs, borders and odd characters. Size, 7 $\frac{1}{2}$ x 15 $\frac{1}{2}$ inches. Weight, 16 ounces.

Wisconsin Quarter Size Case "D"\$0.65

BETTIS LEAD AND SLUG CASES

This Case has compartments from 4 to 28 picas wide, varying by single picas. Partitions run from front to back without central division.

Length, 72 in.; Width, 18 in. outside; Depth, inside, 1½ in.; Weight 21 lbs.

Price\$4.00

Bettis Lead and Slug Case No. 1

This Case has compartments from 30 to 60 picas wide, one compartment for each of the following lengths; 30, 32, 34, 36, 38, 40, 42, 45, 50 and 60 picas.

Length, 72 in.; Width, 18 in. outside; Depth, inside, 1½ in.; Weight, 18 lbs.

Price\$4.00

Bettis Lead and Slug Case No. 2

This Case has compartments from 3 to 48 picas wide, varying by single picas. It also has compartments for ¼ pica lengths, from 3¼ to 9¼ picas.

Length, 72 in.; Width, 18 in. outside; Depth, inside, 1½ in.; Weight, 23 lbs.

Price\$5.00

Bettis Lead and Slug Case No. 3

This Case is the same as No. 1 and No. 2 combined, having a central bar running the long direction of Case.

Length, 72 in.; Width, 18 in. outside; depth, inside, 1½ in.; Weight, 21 lbs.

Price\$5.00

Bettis Lead and Slug Case No. 4

This case has a center bar running the long way dividing the case into two sections, allowing one to be used for leads and the other for slugs.

Length, 72 in.; Width, 18 in. outside; depth, inside, 1½ in.; Weight, 22 lbs.

Price\$5.00

Bettis Lead and Slug Case No. 5

This Case is the same as No. 2, having one section for leads and one for slugs. Each section has compartments for lengths from 30 to 60 picas wide.

Length, 72 in.; Width, 18 in. outside; depth, inside, 1½ in.; Weight, 19 lbs.

Price\$5.00

Bettis Lead and Slug Case No. 6

Bettis Lead and Slug Case No. 7

This Case has compartments in duplicate for all the lengths provided for in Cases Nos. 1 and 2. Leads and slugs can be carried in separate compartments.

Length, 72 in.; Width, 18 in. outside; Depth, inside, 1½ in.; Weight, 25 lbs.

Price\$6.00

Bettis Lead and Slug Case No. 8

This Case takes same lengths as the No. 1, with a working section in front which is large enough to take a 10x24 brass lined or all brass Job Galley.

Length, 72 in.; Width, 18 in. outside; Depth, inside, 1½ in.; Weight, 22 lbs.

Price\$5.00

Metal Furniture Cabinet

The Bettis Space and Quad Case is made to fit top of regular stand 72 in. long, 18 in. wide, 6 in. deep at front, 2½ in. deep at back. The use of this case will enable all spaces and quads for job fonts to be kept in a single case.

Bettis Space and Quad Case\$10.00

METAL FURNITURE CASE

Jones Metal Furniture Case

This Case is constructed of hardwood with a thick 3-ply bottom, firmly fastened to the edges and also to the center bar. Being 2½ inches deep on the inside, it will hold a great quantity of metal, and it is strongly constructed with this end in view. It has 49 compartments as follows:

3 for 4-line metal furniture; 4 for 5-line; 5 for 6-line; 6 for 8-line; 7 for 10-line; 7 for 15-line; 7 for 20-line; 7 for 25-line; 1 for 30-line; 1 for 50-line; 1 large blank space for odd sizes. The weight of this Case, not crated, is 30 lbs.

Jones Metal Furniture Case.....\$7.00

METAL FURNITURE CABINET

The use of this Rack will prove a most economical investment and will greatly prolong the life of metal furniture. It is made with a double face, being filled from both sides, and thus only one-half of the capacity is shown in the illustration. It has two compartments for each length and width, one on each side of the Cabinet. Each compartment holds 16 pieces arranged in two tiers, stacked 8 pieces high, a total capacity of over 300 pounds of metal furniture. It is 15½ inches wide, 9 inches deep and 4 feet 10 inches long, outside dimensions. Weight, crated, 75 pounds. Price.....\$12.00

ELECTRIC-WELDED STEEL CHASES

Made from Silver-Gloss Steel

Every bar of steel used in the manufacture of our Electric-Welded Silver-Gloss Steel Chases is made up from a special grade of open hearth steel. This special mixture was compounded to meet the peculiar conditions of electro-welding, which requirements are that the impurities

shall be very low, so that the steel shall weld well and also prevent what is known as a congregation of impurities rendering the steel brittle and liable to breakage, which happens when the impurities collect together. In order to bring about the right mixture, the proper proportions of carbon and manganese must be effected. Carbon imparts the property of brittleness, therefore only a small percentage of carbon may be used. It is also necessary to have manganese in the proper quantity for the purpose of making it dense, close-grained, tough and strong. Sulphur and phosphorus are great enemies of steel and the best steel contains only very slight traces of these ingredients. Silver-Gloss steel contains the proper proportions of carbon and manganese and is as free from sulphur, phosphorus and other impurities as it is possible to make it. After the steel is made it is first hot drawn through dies to approximately the size, then cold drawn to the correct size. This very process of drawing is a guarantee of strength of each and every bar used by us as it takes a pull of

Cuts through the hard steel with astonishing ease.

some 40,000 pounds to draw each bar through the dies. Any bar that breaks in this drawing process is thrown aside as defective. Therefore the secret of the Electric-Welded Silver-Gloss Steel Chases lies, first, in the grade of steel used and second in the method of welding—In electric-welding the heat is first generated at the center of the bars, and thus the weld is made from the center outward. This is just the opposite to what takes place in making the common hammer and anvil weld, and is largely responsible for the perfection of the electric-weld. In electric-welding, too,

Gradually becomes bright until in a few seconds it is dazzling.

exactly the right amount of heat may be applied to bring the metal to just the degree of fusibility that gives the best results. The material is not weakened by burning, nor is its temper drawn at any point except where the weld is made; and yet the heat is sufficient to cause the molecules of steel to inter-mingle just as they would were the metal melted and cast in a mold; hence it is that the four bars originally used for making an Electric-Welded Chase really becomes one solid, perfect piece of steel, without a flaw or blemish of any sort to indicate that a weld had ever been made.

Is rigidly held in a right-angle vise, while cooling.

STRENGTH OF SILVER-GLOSS STEEL

Silver Gloss steel has a tensile strength almost double that of the material used in the past, as is shown by tests made for us in the testing laboratory of one of the largest steel plants in this country. Three ordinary cast-steel chases and three Electric-Welded chases made

from this special steel, were tested to find the breaking strain of each. The test chases were in pairs, there having been one Electric-Welded and one cast-steel chase in each pair, the two being identical in all respects except as to the material from which they were made. The three cast-steel chases broke at the corners at the following strains in pounds per square inch: 20200, 20600, 23400. The Electric-Welded chases broke at strains of 40100, 40400, 43400 pounds per square inch. As will be seen, in each case the Electric-Welded chase withstood a strain almost twice as great as the other. The test by no means ended here; mere strength lacks much of being the only test of a good chase. Defective tests showed that, on two chases of the same size, when each was sprung a quarter of an inch the Electric-Welded chase returned to its original shape on the removal of the pressure, while the one made from cast-steel remained 3-64 of an inch permanently out of true. In another test the

Double cutter milling machine.

cast steel chase was sprung 21-64 of an inch and the Electric-Welded 24-64 of an inch, the result being, on removal of the pressure, that the former showed a permanent deflection of 1-8 of an inch, while the latter was but 1-32 of an inch out. A series of these tests were made, every one of which showed the Electric-Welded chases to have more than double the resisting power of any others. The tests were all made with a view of determining which of the many samples submitted was best for chase making. Because of its bright, glossy finish we named the new material Silver-Gloss Steel.

Emery Grinding Machine

THE PROCESS OF MANUFACTURE

The bars of steel from which Electric-Welded Silver-Gloss Steel Chases are made are drawn expressly for us. Being cold-drawn, every bar is of the finest texture, and is perfectly true in all dimensions. The bars come from the steel mill in all the special sizes and shapes used in chases. The first process of manufacture is the sawing of the bars to lengths suitable for the work in hand, for which purpose a circular saw is used that cuts through the hard steel with astonishing ease and speed. The bars could, of course, be cut just as you have seen a blacksmith cut a piece of iron on his anvil, and just as most of the cutting is done for hand-welded chases; but that is a crude process that batters the bar all out of shape; so we use a saw. When they leave the saw the pieces are passed to the man in charge of the welding. He places them in the electric-welder, where they are held tightly against each other by huge, vise-like jaws, which gradually, at the will of the operator, close up as the heat increases, the movement being just sufficient to insure a perfect unblemished joint. This weld being made, the now solid piece is rigidly held in a right angle vise that prevents warping out of shape or springing while it is cooling. The illustration shows the appearance of the weld-points. But for the small ridges of excess metal seen at the points where the weld was made, the welding would finish the chase; as it is, all that remains to be done is to cut away the ridge, which work is quickly done by the milling and grinding machines that leave the bars from which the chase is made as smooth and perfect as they were before the welding. The excess of metal formed in the welding process in each inside corner, is removed on the punch press (see illustration). If the chase is to be fitted with bars, the special automatic dove-tailing machine is brought into play, this machine has a specially made table chuck which automatically, and mathematically holds the chase in such positions as to insure the dove-tails being cut exactly in the center, where solid bars only are wanted, and in center and one-sixth off center for the shifting bar chase. After the chase is finished both the serial number and our trade mark is stamped on same. From the very beginning we have kept a card index of all dimensions, size of stock, etc., thus simplifying the ordering of duplicate chases.

Punch Press for Squaring out Inside of Corners

Dovetailing Machine

tting out of loss through pied forms caused by broken chases are taken into account, the printer who will not recognize their value and supply his office with them must be short-sighted indeed.

THE CHASE FOR PLATEN PRESSES

It must not be supposed that the manufacture of Electric-Welded Chases is confined to those used on cylinder presses. Far from it. There is an immense demand for other varieties of Electric-Welded Chases made from Silver-Gloss Steel. While it is true that so far as our knowledge extends, there is but one manufacturer of platen presses furnishing any except cast-iron chases. It is equally true that printers everywhere have recognized the value of the improved chases for their jobbers, and hundreds have been sold. Our business in Electric-Welded chases for job presses is increasing beyond our most sanguine expectations. The first cost of the Electric-Welded Chases for platen presses is a little higher than the prices charged for chases made from cast-iron; but they will last a life-time, and, when cost alone is considered, are much cheaper in the end. But when the value of the time they save stoneman and pressman, and the cutting out of loss through

Stamps it with its serial number and the Barnhart trade-mark

54,000 ELECTRIC-WELDED CHASES SOLD

We do not think that we could add a more convincing argument for the introduction of Electric-Welded Chases in every printing office, than to say that we have sold to date over 54,000 chases. These points explain why Electric-Welded Chases are "practically everlasting and everlasting practical."

ELECTRIC-WELDED STEEL CHASES

All cross-bars are made to exact picas. The trade-mark stamped on every chase is a guarantee that it is made from silver-gloss steel and electrically welded.

IMPORTANT—In ordering chases mistakes will be avoided by observing the following instructions: Give outside measurements. Where chase or chases are to fit press give actual size of bed; an allowance of $\frac{1}{8}$ inch will be made in length of chases. If chases are to be made from other than regular stock, state size desired. If side sticks are ordered, state whether they are to be straight or beveled, and give length of forms if other than standard newspaper size.

BEARER CHASES cost one-half more than regular chases.

SPECIAL TOOL-STEEL CHASES cost one-half more than the regular chases.

To Estimate Price of a Book Chase, size not listed.

Find price of same size Poster or Skeleton chase and add \$4.00 if solid bars only are wanted. Add \$5.00 if one bar only is to be shifted and \$6.00 if both bars are to be shifted. Unless otherwise ordered, Book chases will be furnished with one bar only shifting. Minimum price of Book chase with both bars shifting, \$10.50. For bar only add \$1.00 to list; for pair of dovetails add \$1.00 to list; for both add \$2.00 to list. For extra stock charge same as in Poster Chases. See Poster list for figuring measurements ending in fractions.

To Estimate Price of a Poster Chase, size not listed

Add length and breadth in inches together to obtain measure. Multiply this measure by 11 cents. For price of News or Poster with bar add \$2.00 to list of Poster without bar. Minimum price of Poster chase \$4.50. For extra bar only add \$1.00. For extra pair dovetails only add \$1.00. Measurements ending in fractions to be figured as next full figure. For example: 17x20 3/4 in.—37 3/4 in., figure 38 in.; 33 1/2 x 45 3/4 in.—79 1/4 in., figure 80 in.; 29 3/8 x 40 1/2 in.—69 7/8 in., figure 70 in.

*Charges for Extra Stock

For each 1/4 in. wider than regular, add for measurement, length, and breadth, 40 in. and smaller . . . \$0.20
 For each 1/4 in. wider than regular, add for measurement, length, and breadth, 41 to 60 in. inclusive 30
 For each 1/4 in. wider than regular, add for measurement, length, and breadth, 61 to 80 in. inclusive . . .45
 For each 1/4 in. wider than regular, add for measurement, length, and breadth, 81 to 100 in. inclusive . . .60
 For each 1/4 in. wider than regular, add for measurement, length, and breadth, 101 in. and larger 75
 For 3/4 in. thick stock add for measurement, length, and breadth, 40 inches and smaller 60
 For 3/4 in. thick stock add for measurement, length, and breadth, 41 to 60 inches inclusive 1.00
 For 3/4 in. thick stock add for measurement, length, and breadth, 61 to 80 inches inclusive 1.40
 For 3/4 in. thick stock add for measurement, length, and breadth, 81 to 100 inches inclusive 1.80
 For 3/4 in. thick stock add for measurement, length, and breadth, 101 and larger 2.20
 For extra width and 3/4 in. thick stock, add both of the above advanced charges.

*Charges for extra stock are based on 1/4 inch increase in width over size of stock regularly used for a chase of similar total length and breadth. If a chase is ordered with side bars 1/8 inch, 1/4 in. or 3/8 in., wider than regular, no extra charge will be made. If extra stock is ordered for three side bars only take three quarters of the extra charge for that size chase; for two bars one half, and if only for one bar one quarter.

Note—There will be no extra charge for special size cross bars.

To Estimate Price per Pair of Quartos, sizes not listed.

Add length and breadth of pair over all in inches and multiply this sum by 22 cents per inch. In figuring extra-stock charges, consider each chase separately; charges will be same as for Poster chases. Minimum price pair of Quartos, \$12.00. See Poster list for figuring measurements ending in fractions.

*These sizes carried in stock, and will be furnished unless otherwise specified.

SILVER-GLOSS STEEL ELECTRIC-WELDED STEREOTYPE CHASES

The Best Made

These Stereotype chases are made in the most accurate manner, exactly type high, perfectly square and true. The side lock-up screw is attached to the side stick with a collar in such a manner so as to enable the operator to lock up and unlock the form with the wrench, moving the side stick backward and forward instantly, thus saving much time and avoiding the use of shooting stick and mallet, and consequent injury to the side stick.

METAL AND BRASS CORNER QUADS

The use of Corner Quads insures a better junction of mitered corners by preventing them from slipping past each other. They are made in both brass and metal, and sold at following prices:

Brass Corner Quads, made on both 2 point and 3 point body, in sets of four, per set . . . \$0.20
Metal Corner Quads, made on 3 point, 6 point and 12 point body, in sets of four, per set .15

DURANT COUNTING MACHINES

Are especially adapted for use on printing presses. They are made entirely of iron, steel and brass. The dials have large black figures that are easy to read at a distance. They can easily be re-set to 0, or any number required. A bracket is furnished with each machine for convenience in securing it to the feed-board of a press. They are nicely finished, the cover, lever, dials, springs, etc., being nickle-plated.—Circular

THE REDINGTON COUNTING MACHINE

The Redington Counting Machine has all the necessary qualifications for accurate and rapid counting, is durable, neat in appearance, convenient in size and low in price. All parts are made from sheet steel formed by dies and are, therefore, interchangeable. Simplicity in design, heavy material and large wearing surfaces insure ease of operation and long life for the counter. All working parts are enclosed and protected, yet easily accessible as the case opens both front and back, exposing all mechanism for oiling or inspection. The counter can be set back to zero without the use of a key or other device. It can be run at any speed without jumping or loosing count.

COPY HOLDERS

Rouse, for composing stick	\$0.25
----------------------------------	--------

PATENT CUTTING STICK

The Patent Stick consists of a main body-piece (A), made to fit the groove of your paper cutter. The body-piece has a groove or recess in it, which holds a small strip (B), $\frac{1}{8}$ of an inch square. This movable strip is the cutting-surface, and is held in place by a steel clamp (C), which is drawn up by the bolts (D). The Cutting Strips, being square, can be used on four sides, thus giving the same amount of service as the large sized sticks heretofore used.

A is the Body-Piece made to fit groove in cutter. B is the Cutting Strip on which knife strikes; is $\frac{1}{8}$ inch square, and always fits. C is Steel Clamp which holds the Cutting Strip and prevents warping. D is the Screw which grips the clamp to the body piece.

How to Order. 1. Give size square the main body-piece is to be. Be particular on this point, and see that groove in cutter is accurately measured. 2. Give length of stick. 3. State how far from front edge of stick the knife strikes. 4. State whether knife cuts from right to left or left to right. In ordering cutting-strips, give the exact length required. All strips are cut to a standard uniform gauge, and are sure fit.

Net Price List

CHICAGO DRYING RACK

A more economical addition can not be made to a modernly equipped printing office than a suitable outfit for the proper drying of the printed sheets. An enormous waste of good material is constantly going on throughout the printing field, and there are large quantities of smutted work being delivered to dissatisfied customers, most of which could be avoided by the installation and proper handling of a drying outfit.

These Drying Racks are substantially constructed of selected hardwood, and the framework is finished in the best Cabinet style. They have wide bases, which prevent the frames from toppling over under heavy loads. The Racks are supplied complete with Dryers, and the Dryers are also sold separately in dozen lots.

KOERNER'S PATENT INTERLOCKING DRYING RACK

With these Racks sheets are taken direct from the fly and may be stacked ceiling high, in a perfectly straight and rigid pile, which cannot be knocked over by accident, and with no more weight on the bottom than on the top sheets. This pile is a most effective drying room, occupying only the floor space of one Rack, and from the time the sheets are fed into the machine until ready for the bindery they need not be handled.

The Interlocking device, which makes the pile straight and rigid, is shown in the illustration. Each Rack is firmly locked on its neighbor, but each slides with ease on the Rack immediately below it. They save handling, all the time of that operation, and the consequent waste of paper through offset, smearing fingermarks and tearing. In many cases these Racks save expensive slip-sheeting. They save 75 per cent of floor space over any other method of drying sheets, from one to two per cent of paper, and a vast amount of time. A further saving of time may be effected by placing the Racks as they come from the fly board on a Wisconsin Printers' Truck, made specially to take these Racks, (see Printers' Trucks.) Using this Truck saves handling the Racks—you can move a pile of Racks to any point quicker, safer, and easier on the Truck than the single armful can be moved by hand. The Patent Interlocking Drying Racks are made with hardwood sides, wide softwood slats, and are very strongly put together.

Interlocking Racks, stacked with Paper, straight and rigid.

Price List, Weights and Dimensions

SIZE INSIDE	WEIGHT EACH	PRICE EACH	SIZE INSIDE	WEIGHT EACH	PRICE EACH
8½ x 13 inches.....	1½ pounds	\$0.20	24 x 36 inches.....	8 pounds	\$0.55
11 x 17 inches.....	3 pounds	.25	32 x 48 inches.....	12 pounds	.85
13 x 19 inches.....	3½ pounds	.30	38 x 52 inches.....	15 pounds	1.20

18 x 25 inches.....	5 pounds	.45	45 x 65 inches.....	20 pounds	1.60

The side rails on Koerner's Racks are 1½ inches wide. The slats which support the sheets are ¾ of an inch thick. When stacked, each Rack adds 1½ inches to the height. Unless otherwise ordered, the side rails are always made to run the longest dimension.

The prices given above are for Racks with a clearance of 1½ inches between, when Racks are stacked. For a clearance of 2½ inches add 25 per cent to above prices, and for a clearance of 3 inches add 35 per cent to the above prices.

NEW YORK DRYING RACK

A suitable Drying Rack is a necessity in every economically managed printing office. It will improve the quality of the product, and facilitates the handling of the printed sheets.

The New York Dryers are removable and can be transferred to the press in order to take the sheets direct from the fly. Thus undue handling, which means an excess of spoilage, is avoided. The use of these Dryers prevents undue stacking of the freshly printed sheets, and also expensive slip sheeting is reduced to a minimum. The rightful use of a good set of Dryers will prevent much of the smutting commonly experienced.

SECTIONAL CHASE AND FORM RACK

The Sectional Chase and Form Rack is a new article for press room and composing room requirements, and provides a suitable holder for chases and locked forms at a very moderate price. In the press room the Sectional Chase and Form Rack can be put in position convenient to presses and forms when received from the composing room, ready for the press can be temporarily placed in this rack until required for printing. In the composing room the use of the Sectional Chase and Form Rack will clear up the office, allow more stone room and minimize the danger of piled forms. The Sectional

Section "A"

Section "B"

Chase and Form Rack is made in two sections and sold in sets consisting of two sections "A" and one section "B." One each of sections "A" and "B" is screwed to the floor and one section "A" to the wall. A set arranged thus accomodates six chases or forms. If provision for more chases or forms is required other sets can be added, as the sections are designed to work in multiples. Made of cast iron, strongly re-inforced to withstand any amount of hard

usage. The Sectional Chase and Form Rack represents the newest device for economically placing chases and forms.

Set, consisting of two of Section "A" and one of Section "B"	\$3.75
Single Section "A," each	1.25
Single Section "B," each	2.50

HAMILTON FORM TRUCK

A most convenient article to have around a printing office. It can be used to advantage trucking forms back and forth between the composing room and the press room, without danger of accident. It will take two forms, one on each side, up to 34x48 inches, or several small forms, without overlapping the edge of form beds. It is made of hardwood throughout, re-inforced by cleats underneath, and mounted on four double-wheeled swivel castors. Diameter of wheels is 3½ inches. This insures easy motion. The Truck can be turned around and reversed within the floor space it occupies. The bottoms of the grooves where the chases rest on the Truck are lined with iron. Length, 48 inches; extreme height from the floor, 39¼ inches; extreme width, 42 inches; size of the sloping form beds, 34 inches high, 48 inches long. Weight, crated, ready for shipment, 300 pounds. Other sizes of this truck can be made to order at proportionate prices.

Hamilton Form Truck.....	\$48.00.

PATENT STEEL FURNITURE

Style No. 1—24-point steel with one 12-point notch

Style No. 2—36-point steel with two 12-point notches

Style No. 3—36-point steel with one 18-point notch

Style No. 4—48-point steel with three 12-point notches

Style No. 5—54-point steel with two 18-point notches

Patent Steel Furniture is a well tried and useful device for saving time in making up and locking up printing forms. It consists of pieces of steel in accurate lengths with notched ends, which can be quickly thrown around blank spaces, instead of filling them in the ordinary way with wood or metal furniture. As it takes less material to go around a space than to fill it, so it takes less time to do it. The larger the space the greater the saving both time and material. It pays for itself over and over again in the time and trouble it saves and the accuracy it secures over the ordinary material.

For color and blank work there is nothing in use that can compare with it. Weight for weight it goes six times as far in filling space as metal furniture, and can be used in from one-half to one-sixth the time. It is accurate in every way, to the one-thousandth of an inch. It is not only practically perfect when new, but being made of steel it is always accurate. It is made of 24, 36 and 54 point steel $\frac{5}{8}$ of an inch high, and with either 12 or 18 point notches.

Font A—The lengths from 8 to 42 are of 24 point steel, with 12 point notch, namely: 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40 and 42 picas. The lengths from 45 to 72 are of 36 point steel, with two 12 point notches, namely: 45, 48, 51, 54, 57, 60, 63, 66, 69, and 72 picas. Total—28 different lengths, eight pieces of each, 224 in all	\$54.00
Font B—Has half the quantity of Font A. 112 pieces in all	27.00
Font C—Is the 24 point stock only of Font A, 8 pieces each, 8 to 42 ems, 144 pieces in all	29.00
Font D—Has half the quantity of Font C. 72 pieces in all	14.50
Font E—Is the 36 point stock of Font A, 8 pieces each, 45 to 72 ems, 80 pieces in all	25.00
Font F—Has half the quantity of Font E. 40 pieces in all	12.50
Font G—Is made entirely of 36 point steel, with one 18 point notch, as per Style Number Three, and runs in length from 9 to 72 picas, varying by 3 picas, namely: 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57, 60, 63, 66, 69, 72 picas. Total—22 lengths, 8 pieces each, 176 in all	44.00
Font H—Has half the quantity of Font G, 88 pieces in all	22.00
Font I—Is made of 54 point steel, with two 18 point notches as per Style Number Four, the lengths being 15, 18, 21 and 24 picas, there being four outside pieces and two cross bars for each length, or 24 pieces in all. The outside pieces are notched to receive the cross bars, which are halved together	21.00
Font J—The lengths from 6 to 30 are of 24 point steel, with 12 point notch, namely: 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28 and 30 picas. From 33 to 60 it is 36 point steel, with two 12 point notches, namely: 33, 36, 39, 42, 45, 48, 51, 54, 57 and 60 picas. From 63 to 72 it is 48 point steel, with three 12 point notches, namely: 63, 66, 69 and 72 picas. Total—27 different lengths, 8 pieces of each, 216 in all	58.00

IMPROVED METAL FURNITURE

Our Labor-Saving Improved Metal Furniture is light, strong and accurate. It has no unnecessary metal. Put up in fonts containing the following sizes: 2, 3, 4, 5, 6, 8, and 10 ems pica in width, and 4, 5, 6, 8, 10, 15, 20 and 25 ems pica in length, finished to point system. The 50 and 100 pound fonts contain in addition to the above, 30 and 50 em pica lengths in 2, 3, 4 and 5 em pica widths. We also furnish pieces 30, 40 and 50 ems pica long, in 2 to 10 em widths, on special order.

SUPERIOR CAST-IRON FURNITURE

Not only is cast iron furniture a big improvement over the old metal furniture every body knows, but the Barnhart cast iron furniture in its "hump" possesses an improvement over all other iron furnitures. This "hump" is practically a handle cast as part of each piece 3x10 ems and larger, and easily grasped by the thumb and finger. It adds to the readiness and convenience with which the furniture can be used. It makes unnecessary the jamming of a knife-blade or bodkin between pieces, and its further use as a pry to raise a piece so it can be seized by the fingers. Not only is the lifted

piece more or less damaged, but the adjacent piece which serves as a fulcrum. The "hump" saves all this and time besides. The Barnhart cast iron furniture is: First—Guaranteed to be point system both ways, with point system exactness. Second—The "hump" or projection facilitates handling, saves the furniture itself, saves time. Third—It is forty per cent lighter than regular furniture, and many times stronger. Fourth—As cast iron is

harder and more durable than type metal, it will hold its accuracy longer. With ordinary care in handling it will last indefinitely. Fifth—It is not as easily dented nor as readily affected by heat as lead metal furniture. Sixth—It makes forms lighter. Seventh—It is along the line of the modern movement that is giving us iron imposing surfaces, iron stereo. tables, iron composing stands, etc. Eight—The hump entails no extra cost.

Sizes and Prices of Fonts

All two em furniture is made from specially drawn bright steel.

LABOR-SAVING REGLET CASES

Labor-Saving Reglet Case No. 4

It is an undisputed fact that the use of Labor-Saving Reglet results in a great economy of time and material. A calculation based on the cost of Reglet in yard lengths will demonstrate that our Reglet Cases secure these savings to printers at no advance in price for Reglet, and most moderate charges for the Cases. The best and most accurate oil-soaked Reglet is used and each Case contains equal proportions of nonpareil and pica. Don't waste time and money with the saw and mitre box.

No Reglet is wasted when these Cases are used, as each piece is returned to its place in the Case after use. When the Reglet becomes worn and battered through long usage the Case can be refilled at a moderate cost.

We present here the largest line ever offered of these Cases in various sizes and different arrangements. The Cases are made of selected hardwood and finished in antique oak, of fine appearance and substantial build.

LABOR-SAVING WOOD FURNITURE CASES

No. 12 Standard Furniture Case

No. 17 Mammoth Furniture Case

All furniture which goes into these cases is cut from carefully selected stock, thoroughly seasoned and oil-soaked. It is smoothly finished, accurate and uniform in size.

The feature of Extension Furniture Cases is entirely new and such cases are here listed for the first time. Many printers have found that the lengths which usually go with an ordinary furniture case are not long enough for all requirements. With the Extension Furniture Cases a printer requiring longer lengths can order the companion case to the one he already has and the two will work together. The case with shorter lengths can be set on top of the one with longest lengths. The two cases combined make practically one complete Furniture Case.

BARNHART'S PATENTED ONE-PIECE RIM ALL-BRASS GALLEY

This all-brass galley has a rim of only one piece: a continuous strip of heavy flanged brass, formed to perfectly square corners inside, and secured to the bottom by more rivets than are used by any other manufacturer.

This patented galley is made solely by Barnhart Brothers & Spindler and is sold by them and all their affiliated houses under a guarantee that it is better and stronger than any other galley.

With proper use, it will practically last forever; of rough use, such as galleys invariably get in large offices, it will stand more than any other.

Heretofore there has never been a galley which would hold fast at the corners when used around machines or for handling large, heavy pages, but this one-piece rim galley will hold fast all around.

The rim is flanged so that the galley with its load can be readily and safely grasped; no type load will cause yielding and nothing short of inexcusable abuse will effect the accuracy and durability of this galley.

SUPERIOR ALL-BRASS GALLEYS

Extra Heavy Rims, Bottoms of Standard Thickness and Absolutely Flat

The Superior All-Brass Galley is the strongest and most serviceable galley made. The rim is made of extra heavy brass with an extra lip at the top and bottom, which not only acts as a reinforcement but enables the printer to get a more secure grip on the galley as he lifts it from the case or stone. The corners are securely interlocked and are exceptionally strong and true. The method of interlocking the corners increases the life of the galley to over double that of any other galley. In an all-brass galley the corner construction is the most important point to investigate, as it is there that most of the lock-up strain comes.

Shows how corners are interlocked

The bottoms are treated to a special straightening process, which insures their nearest approach to a perfect flatness. The rivets which hold the sides and ends securely to the bottom are of extra hard brass, extend clear through the sides and bottom of the galley, the holes are deeply countersunk and the rivet headed over, top and bottom. Our method of interlocking the corners and strongly riveting the sides and bottoms has brought the Superior All-Brass Galley to a point of perfection where it is acknowledged to be the standard of quality and construction.

CHALLENGE RIVETED ZINC GALLEYS

Designed for general use—particularly for storage purposes where it is desirable to keep the type in the galleys while taking proofs and correcting. The corners are square where the sides attach to the bottom, thus insuring perfect proofs. The material used is Compressed Plate-Zinc, especially made for this purpose.

CREIGHTON STANDING GALLEY SHELVING

This new Shelving represents a most economical idea for a crowded office. It makes waste space available. The Shelves when fastened to a wall or partition project only 6½ inches. Built any length desired and sold by the running foot. The Shelving can be fastened to wood partitions or to brick walls. Only Brackets and Shelving are required for wood partitions. For brick partitions hardwood Uprights should be used, on which the Brackets are fastened, and the Uprights can be screwed to the brick walls, the screws being fastened into wood plugs set into the brick. Any vacant wall space can be used and converted into valuable storage space for standing ads., jobs under way, electrotypes or book pages. Pages nine inches long can be accommodated with heading to the front, and every line will be easily accessible for correction. The Galley Shelves are furnished either of hardwood or softwood. The softwood Shelving is for drying Simplex type and can be divided, when required, into column widths.

In a wall space six feet long by 5½ feet high, from fifty to sixty pages 7 x 9 can be stored, taking up only 6 inches of space from the wall, and every line of type will be in plain sight, and in a position for alteration. The Brackets are of cast iron, enameled, drilled for screws and ready for adjustment. The hardwood Uprights are drilled for screws to fasten to the wall and also for Brackets properly spaced. It is an easy matter to put the Shelving in place. In ordering Brackets for long lengths about one Bracket should be figured for each three feet of Shelving, taking into consideration the end Brackets. Thus, three Brackets would be required for a six-foot length. When in place, each Shelf takes up a perpendicular space of 9 inches. Weight of Brackets, per pair, 6 pounds; Shelving, per foot, 2½ pounds; one Upright for brick wall, 7 pounds.

Hardwood Shelving, any length, per running foot.....	\$0.35
Softwood Shelving for Simplex type, any length, per running foot	.30
Extra for dividing Shelving lengthwise into 13-em columns or wider, per running foot	.10
Brackets, per pair, including screws.....	.75
Uprights for brick walls, size 1½ x 3 x 65 inches, bored for wall screws and Brackets, each	.75

The prices of the Uprights include heavy screws for fastening into brick walls. Uprights should be spaced about 36 inches apart.

REGULAR GALLEY RACKS

Brackets are held on a stout hardwood frame, and braced as shown in cut. Made of iron, and held in sockets which are firmly screwed to the frame; take single and double Galleys. This is the most substantial Galley Rack made.

Regular Galley Racks for 6 Galleys.....	\$3.00
Regular Galley Racks for 8 Galleys.	4.00
Regular Galley Racks for 10 Galleys.....	5.00
Regular Galley Racks for 12 Galleys.....	6.00
Regular Galley Racks for 15 Galleys.....	7.50
Regular Galley Racks for 20 Galleys.....	10.00

The above prices are for Racks with 8-inch arms No. 14, to take double column Galleys.

STANDING GALLEYS

No. 4 Standing Galley with Cases in Racks.

These Standing Galley Frames are constructed of hardwood throughout and finished antique. They provide convenient dumping and storage surface at moderate cost. The brass-lined tops are covered on the bottoms with heavy sheet brass, such as is used for galley bottoms. The surrounding rims and division strips on such tops are of heavy square brass tubing, making an all-brass top, first class in every respect. These Standing Gallies as constructed hold standard size Letter Boards, No. 1 and 8. They can be specially built with more Case Racks to utilize all the space under the top, and with closed back and ends. Prices given below do not include Cases.

STANDING GALLEY WITH LETTER BOARDS

Equipped with Twenty Hardwood Letter Boards, Providing 102 Square Feet of Letter Board Surface and Accommodating Twenty-Eight Double Column Galleys

No. 10 Standing Galley with Twenty Letter Boards and Galley Racks.

This Standing Galley is specially constructed for use in machine offices requiring large storage room for type forms. The space beneath a Standing Galley has usually been left vacant or partly filled with ordinary case racks, and there was always a consequent loss of floor space and a want of storage room for standing forms. The Letter Boards can be utilized for large and tied-up forms, while the small matter and untied forms can be accommodated in the series of Galley Racks at one end which will take 28 Triple Column All-Brass Galleys. The frame is substantially constructed to stand great weight. The Letter Boards are made of hardwood with side rails mortised to bottoms as shown in the illustration. These Letter Boards are lipped at the fronts to receive the Brass Galley, thus facilitating the transfer of type matter from Galley to Boards and vice versa. These twenty large Letter Boards provide 102 square feet of storage surface.

When top is brass lined it contains over 40 pounds of the finest patent leveled sheet brass, the whole top being covered, and all division strips and surrounding rim are of square brass tubing secured with screws from the under side, providing a smooth all brass top. The zinc lined top contains over 50 pounds of heavy sheet zinc. Both brass and zinc are of the same quality and thickness as used in regular Column Galleys.

The dimensions are: Length over all, 8 feet; depth, 27 inches; height, at front, 3 feet; height, at back, 3 feet 10 inches. Size of Letter Boards is 24 x 30 $\frac{1}{4}$ inches inside.

This Standing Galley can be furnished with 10 Letter Boards 24 x 21 inches inside, in place of the Galley Rack, without change in price.

AUXILIARY GRIPPERS

Pressmen have always been given to the use of all sorts of cumbersome devices in cardboard, string, rubber, or wire, for temporary relief when common grippers fail. Instant relief can be had in nearly every case by the use of Auxiliary Grippers. They are held firmly to gripper by a strong steel spring having three-eighths-inch throw, and can be placed instantly at any point on gripper. Admits of the use of left-hand gauge pin in all jobs. With small forms right-hand gripper can be thrown to right out of feeder's way. If your form has narrow margins the gripper-attachment tongues can be adjusted between lines or at head or foot of sheet. By a slight bend of tongues they will hang to sheet after side grippers let go. All parts are accurately made of the best material, and they are acknowledged by pressmen to be the only practical gripper made. They do not interfere with either wood reglet or metal furniture.

MULLER PATENT HALF-TONE SOFTENING HAMMERS AND PUNCHES

Invaluable in pressrooms where halftone or process plates are used, as their use on the first job usually results in a saving which more than equals their first cost. They are used for softening the harsh edges of vignettéd cuts, whether original halftones, electrotypes,

stereotypes or wood engravings. The hammers are made with lines on each end to match any screen, and the edges are softly tapped, thus softening them as if by magic. Unlike a hand tooled edge the effect of the hammer is not noticeable on the printed page, but the vignettéd edge or other lightened spot appears as if it were re-etched and not touched with a tool. The punches are made in three different shapes, oblong, square and diamond. By the aid of these punches it is possible to carry the softening effect immediately up to a solid, which it is impossible to do with an underlay or overlay alone, and impossible to do with a graver without showing the tool mark.

THE HAMILTON IMPOSING STONE FRAME.

Fitted with Letter Boards, Galley Racks, Furniture Rack, Reglet Rack and Drawers for Metal Furniture.

This is the largest Stone Frame made or ever listed. In large offices it will be found of inestimable value in providing a large space where the stone hands can work freely without interfering. It is firmly constructed of hardwood throughout and finished the same as our best Cabinets. The Stone is hard and the best procurable. This is the only Stone Frame or other piece of printing office furniture which provides Labor-Saving Reglet and Furniture from small sizes up to yard-lengths, with frequent variations.

The Hamilton Imposing Stone Frame. Size of Stone, 48 x 96 inches.

Galley Racks—This Frame has accommodations for two tiers of Galleys on each side, 14 Galleys in each tier, a total of 56 Double Column Galleys.

Reglet Racks—One on each side of the Frame. There are 38 pieces of nonpareil and 38 pieces of pica of each length, making a total of 4,256 pieces of Reglet, amounting to 1,639 yards, all cut labor-saving and comprising lengths by short variations from 12 picas to one yard, or 216 picas.

Furniture—There are two Furniture Racks—one on each side of the Frame. The following lengths are accommodated:—12, 18, 24, 30, 36, 42, 48, 54, 60, 70, 80, 90, 100, 120, 140, 160, 180, 200 and 216 picas of 2, 3, 4, 5, 6, 8 and 10-line furniture making a total of 2,244 pieces or 888 yards of Labor-Saving Furniture.

Letter Boards—The Frame contains 11 Letter Boards, size $24\frac{1}{2} \times 49$ inches inside measure. These run through the Frame and can be drawn from either side. They have a removable partition bar across the center which can be used to back the type against when desired.

Drawers—There are 6 Drawers in the upper part of the Frame, all of which run clear through and can be drawn from either side. The sizes of the Drawers are as follows (inside measurements):—1 Drawer $13\frac{1}{2} \times 48\frac{1}{2} \times 2\frac{1}{2}$ inches; 1 Drawer $25 \times 48\frac{1}{2} \times 2\frac{1}{2}$ inches; 2 Drawers $8\frac{1}{2} \times 48\frac{1}{2} \times 1$ inch; 2 Drawers $13\frac{1}{2} \times 48\frac{1}{2} \times 1$ inch. The four 1-inch Drawers are for the storage of Metal Furniture laid in single depth.

The weight of this Stone and Frame, complete, ready for shipment, including all the Reglets and Furniture is 2,800 pounds. Weight of Stone only, 1,100 pounds.

Hamilton Imposing Frame with Stone, complete\$290.00

THE KAUFMAN IMPOSING STONE FRAME

Fitted with Letter Boards, Sort Drawers, Galley Racks and Indexed Electrottype Cases. Size of Stone, 40 x 80 inches

The general use of large modern Imposing Stone Frames with all space under the Stone utilized, is steadily increasing and few good offices are now without one or more of these decidedly economical pieces of modern Printing Office Furniture. No single article of printers' furniture has undergone such unusual development as the Stone Frame.

The Kaufman is an improved Imposing Stone Frame, somewhat after the style of the original Dorsey Frame but with a different arrangement and accommodating Electrottype Cases and Galley Rack not found in most other Stone Frames of the kind. It will be found very useful in large offices and it has proved to be one of the most popular Imposing Frames on the market.

Letter Boards—There are 11 Letter Boards, 15 x 28½ inches, and 22 Letter Boards, 15 x 20 inches inside measure. These Letter Boards have a lip at the front on which to rest the Galley, and type matter can be pushed from the Galley on to the Board without difficulty. There is a rail at the back and also side rails to push the type against and hold it in position. They are made of the finest selected hardwood, free from imperfections. Climatic changes will not affect them.

Drawers—There are two Drawers which pull clear through and can be drawn from either side of the Frame; size, 16 x 40½ x 2½ inches. In the center there are two Drawers for metal furniture, which pull clear through and can be drawn from either side. These Drawers are 16 x 40½ x 1 inch. They provide a convenient place for the systematic storage of the metal furniture where the stone man can always have it handy without leaving his work.

Indexed Electrottype Cases—There are 18 special Indexed Electrottype Cases in this Frame; size 20 x 20 inches inside. These Cases are numbered consecutively so that a proper record can be kept in the index book of the contents of each Case. With each Case there is an assortment of all kinds of division strips, including four of the long, double slotted ones which run from front to back of the Case, and various sizes of the short cross-division strips. An Indexed Book accompanies this Frame for use in connection with these Indexed Electrottype Cases.

Sort Drawers—There are 16 Sort Drawers in this Frame, each divided into ten equal size compartments, the size of each compartment being 3 x 4 x 3 inches. These Sort Drawers provide storage room for an immense amount of special type not in general use but which must be kept in readiness for special and large jobs.

Galley Racks—This Frame has accommodation for 60 Gallies. There are three tiers to accommodate Double Column Gallies, and one tier to accommodate Single Column Gallies, 15 Gallies in each tier.

The shipping weight of this Frame, complete, with the Stone, is 1,750 pounds. Weight of Stone only, 770 pounds. Occupies floor space, 42½ x 82½ inches.

Kaufman Imposing Frame, complete with Stone, 40 x 80 inches.....\$150.00

THE ALGOMA IMPOSING STONE FRAME

Fitted with Chase Racks, Sort Drawers, Letter Boards, Reglet and Furniture, and Drawers
for Tools and Metal Furniture

The Algoma Frame is a companion piece to the Two Rivers and Wisconsin Frames, taking the same size of Stone, 36 x 60 inches, but with a change in equipment.

The placing of the Furniture on the end is an especially good feature. It prevents waste of room. One end is entirely taken up by the Reglet and Furniture, which leaves the entire surface of both sides to be utilized for Letter Boards, Chase Racks and Sort Drawers, with the exception of 10 inches, which is covered by panels, as shown. The Assortment of Reglet and Furniture is in the usual widths from 2 to 10 picas wide, and in the most convenient lengths from 10 to 60 picas long, with variations of 3 to 6 picas. The Reglet assortment is of nonpareil and pica from 30 to 60 picas long, with variations of single picas.

This is a most convenient Frame for all around purposes, and it embraces most of the good features of other Stone Frames combined into one piece of furniture. It is thoroughly made of selected hardwoods, nicely finished, like the best of printers' Cabinets, and strongly bolted to safely carry any load to which it can be subjected. The use of this modern Stone Frame is decidedly economical. It contracts the space occupied by material used about the Stone, and brings it within easy reach of the make-up man. It does away with useless running back and forth about the office, hunting for material and interference with other workmen. It will save space as well, and where rents are high and space is necessarily limited, this Stone Frame will replace the cost in a saving of time and material in a very short time.

Letter Boards—There are 22 Letter Boards arranged in 2 tiers, 11 Boards in each tier, size 15 x 17 inside. These Letter Boards are made with lips on the front to receive the Brass Galley, so that type can be easily transferred from the Galley to Letter Boards.

Sort Drawers—8 Sort Drawers arranged in one tier. Each Drawer is sub-divided into 6 compartments, each $5\frac{1}{2} \times 4\frac{1}{2} \times 2\frac{1}{2}$ inches deep inside.

Drawers—Under the Coffin there are 5 Drawers, all of which run clear through and can be withdrawn from either side. The 2 large Drawers are 4 inches deep and $13\frac{1}{2} \times 36\frac{1}{2}$ inches inside. In the center are 3 shallow drawers for metal furniture, 1 inch deep and $13\frac{1}{2} \times 36\frac{1}{2}$ inches inside.

Chase Racks—One side of the Frame is taken up with Chase Rack equipment. There are 14 Racks $10\frac{1}{2}$ inches in height by $12\frac{1}{2}$ inches deep; 9 Racks 16 inches high by 19 inches deep; 6 Racks $26\frac{1}{2}$ high by 18 inches deep. All of these Chase Rack compartments are lined with iron on the bottom turned at the edges to prevent damage to the wood work when heavy forms are pushed into the compartments.

Furniture—A total of 181 yards of selected oil soaked Furniture of various widths cut on the point system and cut into 1,008 pieces as follows: 16 pieces each 2, 3, 4, 5 and 6 picas wide, cut 18, 21 and 24 picas long. 8 pieces each 8 and 10 picas wide cut 18, 21 and 24 picas long. 20 pieces each 2, 3, 4, 5 and 6 picas wide cut 30, 36, 42, 48, 54 and 60 picas long. 10 pieces each of 8 and 10 picas wide cut 30, 36, 42, 48, 54 and 60 picas long.

Reglet—An assortment of nonpareil and pica. 34 pieces each of nonpareil and pica 30 to 60 picas long, with variations by single picas: a total of 458 yards cut into 2,108 pieces.

Stone—The best Vermont marble free from imperfections.

Weight of Algoma Frame complete with Stone and full equipment, crated, 1,100 pounds. Weight of Stone only, 500 pounds. Occupies floor space $38\frac{1}{2} \times 62\frac{1}{2}$ inches.

TWO RIVERS IMPOSING STONE FRAME

Fitted with Labor-Saving Furniture and Reglet, Letter Boards and Sort Drawers,
Roller Cabinet and Drawers for Metal Furniture

There has been a demand for medium size Imposing Stone Frames built after the style of the Dorsey Frame. To meet this demand several Frames have been devised, one of which is represented by the Two Rivers Frame. It embodies most of the good features of the Dorsey and at the same time provides Letter Board and Sort Drawer equipment. This Frame has been on the market for some time and is proving a general favorite. It is strongly constructed of selected hardwoods throughout and is strongly bolted. The finish is like the best printers' Cabinets.

Letter Boards—Eleven Boards on one side, inside measure, 25 x 30½ inches. These Boards are lipped at the front to receive the brass Galley.

Sort Drawers—Sixteen in two tiers, each divided into 10 equal compartments, size 4½ x 4½ x 3 inches inside.

Drawers—Two large Drawers at top which run through Frame and can be drawn from either side. Size, 13½ x 37 x 2½ inches. In the center, at the top, one above the other, running through the Frame from side to side are two Drawers for the storage of metal furniture. Size inside, 13½ x 37 x 1 inch.

Furniture—Of clear selected stock, oil soaked, each piece with length stamped on the end. There are nine different lengths, as follows: 12, 18, 24, 30, 36, 42, 48, 54 and 60 picas, the variation being by inches, or 6 picas. The widths and number of pieces are as follows: 18 pieces of 2-line cut 12, 18 and 24 picas long; 24 pieces of 2-line cut 30, 36, 42, 48, 54 and 60 picas long; 15 pieces of 3, 4, 5 and 6-line cut 12, 18 and 24 picas long; 20 pieces of 3, 4, 5 and 6-line cut 30, 36, 42, 48, 54 and 60 picas long; 12 pieces of 8 and 10-line cut 12, 18 and 24 picas long; 16 pieces of 8 and 10-line cut 30, 36, 42, 48, 54 and 60 picas long. Total number of pieces, 1122; amounting to 200 yards.

Reglet—Absolutely accurate and on the point system. A double Rack for holding 37 pieces of nonpareil and 37 pieces of pica of each of the following lengths: 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57 and 60 picas, a total of 2072 pieces, amounting to 200 yards.

Stone—The best Vermont marble, and with a perfect imposing surface.

Roller Compartment—Made with door. Rollers stand on end. Has accommodation for three each, rollers for eighth, quarto and half medium presses. When roller compartment is not required, this cupboard can be used for a variety of purposes. An additional shelf will convert it into a convenient ink Cabinet or it can be used for the storage of Gallies, etc.

The Two Rivers Frame occupies floor space 36½ x 62½ inches. Shipping weight, with Stone complete, 1,140 pounds Stone only, 500 pounds.

Two Rivers Imposing Stone Frame, complete with Furniture, Reglet and Stone, 36 x 60\$125.00

WISCONSIN IMPOSING STONE FRAME

Fitted with Blank Cases, Chase Racks and Drawers for Metal Furniture

This will be found a most useful Frame, containing as it does Racks for large sizes of chases, something not found in most other Stone Frames. We furnish this Frame with plain Blank Cases as shown in the illustration, or with Indexed Electrotypes Cases. It is thoroughly well built of hardwood throughout and bolted at the ends. The Coffin is of selected oak. The ends are tastefully paneled with molded edges.

Wisconsin Imposing Stone Frame. Size of Stone, 36 x 60 inches

Cases—On one side of this Frame there are 28 Cases, 15 x 26 inches. These Cases are arranged in two tiers, 14 in each tier. They are of the "New Departure" pattern with 3-ply bottoms, and as placed in the Frame are practically dust proof.

Chase Racks—On the other side are Chase Racks, as follows:—9 compartments, 26 x 18 inches; 9 compartments, 14 x 18 inches; 9 compartments, 11½ x 15 inches. The bottoms of Chase Racks are covered with heavy sheet iron, turned at front edge and securely fastened, thus preventing injury to the Frame by the iron chases when pushed into place.

Drawers—At the top are two Drawers, 36½ x 21 inches and 4 inches deep, running through the Frame and can be drawn from either side. These are for quoins, tools, furniture, etc.

Stone—The best Vermont marble, 2 inches thick, and free from imperfections. This Stone is hard and it makes the best stone imposing surface ever offered.

The Wisconsin Frame occupies floor space, 38½ x 62½ inches. Weight of Frame, complete with Stone, 1100 pounds. Stone, only 500 pounds.

THE DORSEY IMPOSING STONE FRAME

Fitted with Furniture Case, Reglet Rack, Chase Racks, and Drawers for Metal Furniture

The Dorsey Imposing Stone Frame with Labor-Saving Furniture and Chase Racks

We show here one of the most improved Imposing Stone Frames. It will be noticed that there is no waste room, but all space is utilized in the most advantageous manner. The Dorsey Frame was the pioneer of all modern Stone Frames and was introduced several years ago. It has proved a popular Frame and is still more often called for than any other Frame of its kind. Modifications of this Frame can be furnished at proportionate prices. It is made in one size only. The size of Stone is 40x80 inches, with smooth face and free from imperfections. The height from floor to top of Stone is 41½ inches. The frame occupies floor space 42½ x 82½ inches.

Labor-Saving Furniture Rack—The Frame contains a labor-saving rack filled with Furniture. This Furniture is cut in the following lengths and widths:—18 pieces, each 2, 3 and 4-line; 15 pieces, each 5 and 6-line; 9 pieces, each 8 and 10-line, cut 25, 35, 70, 80, 90, 100, 120, 140 and 160 ems long. 24 pieces, each 2, 3 and 4-line; 20 pieces, each 5 and 6-line; 12 pieces, each 8 and 10-line, cut 30, 40, 50 and 60 ems long. A total of 500 yards cut into 1,562 pieces. This gives a better and larger assortment than the Mammoth Furniture Case. The length and width is stamped on the end of each piece.

Cupboard or bins—On the opposite side from the one shown in the illustration, over the chase rack, are 2 large compartments for general storage; one compartment is 17 inches deep, 37 inches long and 10½ inches high; the other is 28 inches deep, 37 inches long and 13 inches high. This arrangement utilizes every inch of space under the Stone. The Frame has paneled ends and is varnished.

Chase Racks—At the bottom, on the side shown in illustration, are 36 Racks for chases for 8x12 job press. On the opposite side are Racks for 18 chases for 10x15 job press, and 18 chases for 12x18 job press. On the side of second tier of Drawers there are 8 compartments, 4 on each side of the Frame, for string or small tools.

Rack for Steel Furniture or Cut Reglet—In the center, arranged in double tier, are 36 compartments for Steel Furniture or cut Reglets. These compartments hold the following lengths:—12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57 and 60 ems; 2 compartments for each length, except the 42-em length, which has 4 compartments. Each compartment holds 35 pieces of pica or 70 pieces of nonpareil Reglet, or 11 pieces of Steel Furniture, 3 picas wide.

Drawers—There are 6 Drawers at the top. On the left-hand side, extending half-way through, are 2 pulling out from each side, and 2 on the right-hand side at the top, reaching clear through, and can be pulled out from either side. These Drawers are ¾ inch deep and 11½ inches wide, and are used for storing Metal Furniture. Under these Drawers are 3 large Drawers, 1 reaching clear through and 2 reaching half-way through. These Drawers are 3 inches deep by 22½ inches wide inside,

Weight—Complete, ready for shipment, including Stone, 1,700 pounds. Weight of Stone only, 770 pounds.

TEXAS IMPOSING STONE FRAME

Texas Imposing Stone Frame fitted with Letter Boards and Sort Drawers. Size of Stone 40 x 80 inches.

This Stone Frame is a companion piece to the Dorsey Stone, the two being exactly alike in form and size, only differing in the interior arrangement under the Stone.

Sort Drawers—There are twenty drawers for sorts, and each drawer is sub-divided into twenty equal compartments. Each drawer is 24 inches deep, 14 inches wide and 40 3/8 inches long, inside measure. Each of the 400 compartments is 3 3/8 x 6 3/8 inches. Ten of these drawers are at each end of the Frame, and all run clear through and draw from either side. Each drawer runs on 12 steel rollers, fitted into the runs, six on each side. The edges of drawer sides which come in contact with the steel rollers are lined with iron.

Letter Boards—In the center, arranged in four tiers, two tiers drawing from each side, are fifty-six hardwood Letter Boards, fourteen Boards in each tier. These are placed compactly and represent 140 square feet of storage surface. These Letter Boards are 18 1/4 x 19 1/4 inches inside measure.

Weight—Complete, ready for shipment, including Stone, 1,900 pounds. Weight of Stone only, 770 pounds. Texas Imposing Frame with Stone, complete\$150.00

ECONOMIC IMPOSING STONE FRAME

Economic Imposing Stone Frame. Size of Stone 24 x 36 inches.

— This represents the smallest Imposing Frame made, taking a Stone 24 x 36 inches. It is a modern Frame and possesses many of the excellent features found in much larger Frames. A strictly first-class piece of furniture in every way, and fully guaranteed to give perfect satisfaction to our customers.

There are eleven Letter Boards on one side, size inside, 33 inches wide and of varying depths from 13 1/4 to 19 inches. At the top there are two Drawers for the storage of metal furniture and one deep Drawer for quoins, tools, and other accessories. These Drawers run clear through the Frame and can be drawn from either side. On the other side of the Frame is an assortment of Wood furniture, as follows: 21 pieces of 2, 3 and 4-line; 15 pieces of 5 and 6-line; 12 pieces, 8 and 10-line, cut 12, 18 and 24 picas long. 28 pieces, 2, 3 and 4-line; 20 pieces, 5 and 6-line; 16 pieces, 8 and 10-line, cut 30, 36, 42, 48, 54 and 60 picas long. This is a fine assortment of lengths and widths most used, and brings the Furniture close to the stone man, where it is required. The Frame is strongly constructed, of hardwood throughout, and the Stone is of the finest quality. Weight, crated, ready for shipment, without Stone, 450 pounds; including Stone, 650 pounds.

Economic Imposing Frame with Stone, complete\$60.00

IMPOSING STONES AND FRAMES

A liberal equipment of imposing surface will help to secure the maximum output. In most offices there is a decided weakness in this respect, and constant shifting of type matter is necessary, with much pi and damage to valuable material. This is particularly true of country printing offices, where the paper forms monopolize the Stone surface seven days in the week, and the job forms are made ready on wooded surfaces and in odd corners all of which is wasteful and expensive.

The utility of a Stone frame is doubled by utilizing the space underneath for Letter Boards, Chase Racks, Furniture, Reglet, etc. We show a full line of Imposing Stone Frames where concentration is desirable, the modern Frames, like the Dorsey, Algoma, Economic, Two Rivers, Kaufman, Wisconsin, Texas, and Hamilton Frames are recommended.

These low-price, square-legged Frames will answer admirably in country offices where space is not at a premium.

Price of Coffins—When Coffins only are desired we can furnish them, made in any size, at 75 cents per running foot the long way. The prices of Tables without Stones include the Coffins. Imposing Stones only for larger Frames list at \$1.00 per square foot.

Imposing Frames are made of hardwood in knock-down form. This insures convenience in handling, and large Frames can be taken up stairways and through narrow doors.

How to Bed a Stone—To properly bed an imposing surface it should be laid in putty. Take the stone and place it on skids on the floor face down. Roll strips of putty and lay on the Stone where the supporting strips will rest. Take Coffin and reverse, placing it over the Stone. Lift Coffin and Stone together and place on the Frame. Tap Stone to thoroughly bed and see that it projects evenly above the inner edge of the Coffin the thickness of a brass Galley bottom. Fill space between edges of Stone and Coffin with putty.

Iron Surfaces—All Stone Frames listed in this catalog can be furnished for iron surfaces. Such surfaces do not usually require a Coffin, which reduces the list price of the Frame 50 cents per foot the long way. For instance, a 36x60 Frame without the Coffin would take a reduction in the list price of \$2.50. When iron surface is to be used customer should determine the exact size of the iron surface which should conform with the size of the Frame. It is usual to allow iron surfaces to overlap the edges of the Frame one-half inch all around.

Write for full particulars covering Stone Frames with iron surfaces.

Notice—All Imposing Stones are crated separately and are shipped at the customer's risk. No claim can be made on us or the Transportation Company if breakage occurs. As Stones are very heavy this is necessary in order to get a low freight rate. If shipped released they take 4th Class rate, if not released they take 1st Class rate. Orders for Imposing Stones are accepted only on this basis, unless otherwise specified.

IMPOSING STONE FRAMES WITH LETTER BOARDS

These Frames are strongly constructed to sustain the great weight to which they will be subjected. The frames and coffins as well as the letterboards are made of hardwood, and all the material entering into them is carefully selected and free from imperfections. The outside is filled and varnished like all cabinets. No better disposition of the space underneath an Imposing Frame can be made than to use it for letter boards. If the type is dead it is shifted from the stone to the board without any loss of time; if the matter is alive, it is handy for imposition.

INK FOUNTAINS

Chandler & Price Fountain

The Chandler & Price Fountain is simple and effective—quickly cleaned; quickly adjusted to proper flow, at any rate needed; easily removed from press and replaced by extra fountain for colors, if desired. Ink blade is of finest steel and its adjustment insures positive flow.

Chandler & Price Fountain.....\$20.00

Buckeye Fountain

The Buckeye Fountain is easily attached—is perfect in construction and action. The roller is easily removed for cleaning; ink supply regulated by a "twist of the wrist."

Buckeye Fountain.....\$10.00

Challenge Full Width Fountain

Challenge Full Width Fountain is similar in construction to the cylinder press fountain and is intended for cut and solid tint work.

Challenge Pony Fountain is built on the same principle as the full width fountain and is intended for the general run of work in a job office.

The Direct Full Width Fountains are very simple, have spring steel blade with a series of thumb-screws for regulating supply of ink; a hinged joint provides suitable adjustment and permits the fountain to be raised clear of the rollers when not in use.

Direct Pony Fountain is built on the same principle as the Direct Full Width; intended for the general run of small work; it is very easily cleaned.

Challenge Pony Fountain

Direct Full Width Fountain

Direct Pony Fountain

The New Century Fountain is built to wear. The feed-roll, ratchet nut, and driving stud are all cut from cold-rolled steel shafting stock. The ink box is carefully milled out smooth and clean, as are also the bearings in bed. The thumbscrews are drop-forged. For imitation typewriter work, and on all work requiring a well-regulated, uniform, steady flow of ink, the value of the New Century fountain cannot be overestimated.—Circular.

Boston Lead Rack

BOSTON LEAD RACK

Made in four sections, which are sold separately, if desired. The different lengths which go in each section are stamped at the bottom of each compartment, as shown in cut. A line-gauge for determining lengths is attached to each section. The four sections accommodate lengths from 4 to 7 picas varying by ens, and from 7 to 60 picas, varying by ems.

TWO-TIER WISCONSIN RACK

In this Rack leads and slugs lie flat and will not pi. (In Racks where leads are placed on edge pi inevitably results). There are compartments to take leads from 4 to 12½ ems, varying by ens, and from 13 to 60 ems, varying by ems, the lengths being stamped over each compartment. The Rack is solidly built. Compartments are eight inches high. Will hold 750 pounds of leads and slugs.

FOUR-TIER WISCONSIN RACK

Has two compartments each for all sizes in the two-tier Rack described above, and is similar in design and construction. One compartment of each size may be used for leads and the other for slugs or reglet. Will hold 1,500 pounds of leads and slugs.

REGLET TO FILL

A font of Labor-saving Reglet to fill a Two-Tier Wisconsin Rack, consists of 600 yards cut into 4,554 pieces, 23 pieces of pica, and 46 pieces of nonpareil of each of the 66 different lengths. Weight, 40 pounds.

A font of Labor-saving Reglet to fill a Four-Tier Wisconsin Rack, consists of 1,200 yards, cut into 9,108 pieces, 46 pieces of pica and 92 pieces of nonpareil of each of the 66 different lengths. Weight, 80 pounds.

Eureka Lead Rack

EUREKA LEAD RACK

Substantially constructed in two sections, each section holding lengths, from 4 to 28 ems, varying by single ems. One section may be used for leads and the other for slugs. The partitions in this Rack are placed on an incline to prevent the leads and slugs from falling.

A font of Labor-saving Reglet to fill this Rack, consists of 170 yards cut into 2,250 pieces, 30 pieces of pica and 60 pieces of nonpareil for each of the 25 different lengths. Weight, 11½ pounds.

Four-tier Wisconsin Lead Rack.

CHALLENGE METAL TIE-UP SLUGS

Metal Tie-Up Slugs are of 12 point body and made from the best grade of metal and are grooved on one side so they can be placed around the type pages, when being locked up, without removing the string. This will save many a page from being pried just when it is needed. It will save all of the time usually consumed in removing the string and consequently will save the time required for putting string around the form when it is again taken from the chase.

Cut to measure, 4 to 6½-ems pica, per lb.	.35
Labor-saving fonts, 5, 10 or 25 lbs., per lb.	.25

ROUSE LEAD AND RULE CUTTERS

Numbers 30 and 20

The Rouse Lead and Rule Cutter No. 30 is the best Cutter made. The gauges can be set instantly. They are locked automatically and can not possibly slip. The Front Gauge slides on a stationary rod which is graduated to picas, and which acts as a truss to the gauge-rod proper, the whole forming an extremely rigid and unvarying construction. This gauge is especially convenient for cutting short lengths, as it sets to one nonpareil as readily as to any other measure. The Point Gauge comes with the No. 30 Cutter only, and can be set quickly and accurately from six points to forty-five picas by points. In every other respect the No. 20 and No. 30

Cutters are identical. Both machines are graduated to picas, and numbered every five ems, the back-gauge-rod indicating the measures when reversed and extended beyond the bed of the machine.—Circular.

No. 30, Rouse Lead and Rule Cutter, gauges to 105 picas by nonpareils; also 45 picas by points. \$12.00
No. 20, Rouse Lead and Rule Cutter, gauges to 105 picas by nonpareils. 10.00

ROUSE LEAD AND RULE CUTTERS

Numbers 10 and 1

The No. 10 Cutter is a good, serviceable machine, more particularly adapted for small offices, paper box makers, and for cutting odd lengths. The Bed Gauge is reversible and is clamped quickly and securely by means of a compression thumb screw. Both Gauges are graduated to picas and numbered every five ems. The Bed Gauge has two rows of figures, one to indicate the measures when in its normal position, the other row to indicate the measures when the gauge is reversed and extended beyond the end of the bed. This cutter also has the grooved bed, which, with the flanges on the gauge-head preclude the possibility of thin material getting under the gauge.—Circular.

The No. 1 Cutter is exactly the same as the No. 10, except that it is not graduated.

No. 10, Rouse Lead and Rule Cutter, graduated to picas. Capacity, 84 ems \$7.00
No. 1, Rouse Lead and Rule Cutter, not graduated. Capacity, 84 ems 6.00

"SUCCESS" RULE AND LEAD CUTTERS

The "Success" Lead and Rule Cutter has made a great reputation by its time and labor-saving qualities. Any thickness of brass rule up to 6 point can easily be cut with sizes 1 and 2. With the No. 3 Cutter any thickness of brass rule up to 10 point can be cut. The improved bed gauge is reversible and made to extend its entire length beyond the bed. This allows long leads to be cut as quickly and accurately as short ones. Narrow pieces of leads and brass rule are cut exact with the aid of the front gauge. Nos. 1 and 2 gauge 12 inches with the rear gauge and 7 inches with the front gauge. No. 3 gauges 18 inches with the rear gauge and 9 inches with the front gauge.—Circular.

No. 1, 9 inch bed, not graduated, gauges 12 inches. \$ 8.00
No. 2, 9 inch bed, graduated by picas, gauges 12 inches. 9.00
No. 3, 18 inch bed, graduated by picas, gauges 18 inches. 12.00

LINOTYPE SLUG CUTTER

This cutter is designed for cutting single Linotype slugs. It is of great advantage where irregular lengths, a single letter, or a small portion of a slug has to be cut off. The adjustable gauge can be instantly set for cutting any desired length.—Circular.

Linotype Slug Cutter \$12.00

B. B. & S. LEAD CUTTER

A strong, cheap and reliable lead cutter.

B. B. & S. Lead Cutter \$2.00

CHANDLER & PRICE LEAD AND RULE CUTTER

This cutter embodies several valuable features, and is a radical departure from old styles. The bed is nearly vertical, but inclines slightly backward, with a raised guide along its lower edge. The lead or rule rests on edge and assumes its position by gravity, assuring a square cut. The guide is accurately graduated to 12-point ems, and numbered to 5-em lengths. The gauge is reversible for cutting leads longer than the bed and fitted with a latch to gauge the slots of the guide. A thumb screw holds the gauge for odd lengths. Gauges fourteen inches, 0 to 84 ems.—Circular.

Chandler & Price Lead and Rule Cutter, weight, 15 pounds...\$8.00

MERCANTILE ADDRESSING MACHINE

A modern system of addressing envelopes, letters, circulars, bills, statements, etc. Soon pays for itself in the saving of labor, time, postage and paper. Operated by foot power, fitted for steam when so ordered. Prints and moves the next address into place at one motion of the foot. No. 4 machine automatically prints same name twice if desired—once on bill and once on stub or envelope.

This machine is especially adapted for use of Printers, Publishers, Wholesale Merchants, Manufacturers, Gas Light Companies, Electric Light Companies, Fire and Life Insurance Companies, Lawyers, Collection Agencies, and in fact every one with a mail list of a few hundred up to the millions. With one of these machines your office boy or girl can attend to mailing your circulars, etc., at the rate of 2000 or more an hour. Costs but a trifle to keep your list corrected up to date. Names are stored away in a neat, convenient cabinet, occupying less space than by any other system. It is built of iron and steel, in the most substantial manner, very simple

in all its parts, not liable to get out of order, and will last a lifetime. It is operated by treadle and both hands are free for handling papers.—Circular.

ACME MAILING MACHINE

Acme Mailing Machine

The Acme has been simplified, strengthened and improved without materially altering the shape of the mailer. Anyone who has used other mailers will at once be able to handle this with increased facility, because it is much lighter and more convenient. That the machine is a favorite wherever used is attested by numerous testimonials from those who use it daily.

The machine was designed by a practical mailer, for years employed by one of Chicago's largest dailies, and he has produced something that will do the greatest amount of work in the smallest space of time and with the least labor to the operator.—*Circular.*

Acme Mailer, net\$15.00

MUSTANG MAILING MACHINE

Mustang Mailing Machine

The Mustang Mailer occupies space 37 inches in length and 4½ inches in width, is made wholly of iron, without springs or complications of any kind to get out of order. They are capable of printing addresses at the rate of 1,500 to 2,500 an hour, according to the expertness of the operator. The mail list is imposed (made up) on galleys 1½ inches (10 ems pica) in width on the inside. Each galley will contain 75 to 80 addresses, is easily accessible for making corrections, and is convenient for handling.—*Circular.*

IMPROVED UPRIGHT MITERING MACHINE

The regular machine is fitted with a special sliding gauge by which rules can be cut to picas or other lengths, both rapidly and accurately, for the gauge can not slip.

The machine fitted with the micrometer gauge enables the operator, through its extremely accurate gauge combinations to shave a piece of rule exactly to any number of picas, nonpareils, or even points of the new standard system. The gauge itself consists of two main parts—the body and a sliding front piece, which is advanced or retracted by a milled-head micrometer screw, which allows exactly one pica lateral motion, and which, at each complete revolution, alters the distance between the shaving-knife and the gauge four standard points, or three-to-pica. A pointed indicator on the micrometer screw enables the operator to determine readily each half revolution, two points.—*Circular.*

Price, with sliding gauge.....\$15.00
 “ “ micrometer gauge..... 20.00

CHANDLER & PRICE MITERING MACHINE

Miters perfectly all kinds of brass or metal rule. The knife is made of the best steel and is easily sharpened. By adjusting the screw at the end of the hub, the cutting-wheel receives sufficient movement on the stud to readily admit of cutting rule to exact lengths.

Chandler & Price Mitering Machine, weight, boxed, 42 lbs...\$15.00

MITER BOXES

We offer here a Miter Box which can not be broken. It is made of lumber that is built up of different layers, with the grain crossed.

Unbreakable Miter Box, 13½ cms wide, \$0.50
 Unbreakable Miter Box, 3 in. wide... .60
 Old-Style Miter Box, 3 in. wide 50
 Iron Miter Boxes, each 2.50

HAMILTON NEWSPAPER FILE

Fastening closed

Made of oak, nicely finished, with brass fastenings and polished-steel thumbscrews. The method of opening and closing our file is novel and simple. The clasp end of the file has a flat-headed thumbscrew (see cut), which is passed through a slot, and by giving the screw a quarter turn the file is securely locked. When the head is turned parallel with the file it opens instantly.—*Circular.*

These files are made in regular sizes, to hold sheets 20, 22, 24, 26, 28, 30 and 34 inches wide. Other sizes made if desired.

Hamilton Newspaper Files, each.....\$1.25

THE SUPERIOR NEWSPAPER FILE

Made of steel, light, simple, and indestructible with ordinary use. As quickly worked as picking up a pencil. Simply lift up the top strip, file your paper, and put back the top clamp which automatically locks itself. No screws nor hinges. No space required for opening. Takes any size paper.—*Circular.*

BATES TYPOGRAPHIC NUMBERING MACHINES

Model No. 27

Nº 12345

Model No. 27 for General Job Work

This is a type-high, automatic numbering machine for general job work, designed to be locked up in the form with type or other matter or to be used alone when the number only is to be printed. Its work is entirely automatic, every figure disc advancing in consecutive order from 1 to 99,999. Only the best materials and the highest order of mechanical skill are employed in its construction. It may be taken apart in an instant

View Showing Parts Detached for Cleansing

for cleansing—without removing any screws—and is as quickly re-assembled. Provision is made for skipping any number necessary, as may be required for check and other work which runs several forms to the page. All parts are absolutely interchangeable. The figures are engraved upon steel wheels and are practically indestructible. Only the size and style of figures shown in the illustration are carried in stock; others are made to order. Size of standard machine:—1½x½ inches. Special small sizes made to order. Prices on application.

Model No. 28 is the same in every respect as Model No. 27, except that it is made with six instead of five wheels. Capacity 1 to 999,999. Size, 1½x½ inches.

Model No. 27.....	\$14.00
Model No. 28.....	18.00

Model No. 29 for Cash Sale Books

Model No. 29 shown in the accompanying cut is of the same construction as Model No. 27, but designed to number consecutively from 1 to 50 or 1 to 100 and repeat automatically. Same machine made to number backward if desired. The simplest and most durable machine for this purpose ever produced. Size: 2 wheels, 1½x½ inches; 3 wheels, 1½x½ inches. Made with same style figures as Model No. 27 without extra charge.

Model No. 29, 2 wheels.....	10.00
Model No. 29, 3 wheels.....	14.00

Model No. 31 for Numbering Pawn Tickets, Baggage Checks, Cotton Tags, Etc.

Nº 29

An Automatic Machine made with any size figures from one quarter inch to one inch in height. The design and construction is the same as Model No. 27. These machines are more than type-high, but are used with entire success on ordinary printing presses by mortising the bed or re-adjusting the platen.

Model No. 31 (5 wheels, ¾ inch figures).....	\$45.00

123456

Model No. 41 for Numbering Sales Books, Tags, Etc.

An Automatic Type-high Numbering Machine made with figures of the greatest height that can be operated with type or without special adjustment of the press. In general design and construction it is the same as Model No. 27. It is made with six wheels and to number either forward or backward. Also, to repeat the number fifty times and advance one unit automatically.

Model No. 40 is the same in design and construction as Model No. 41 but made with five wheels.

Model No. 40, 5 wheels.....	\$27.50
Model No. 41, 6 wheels.....	30.00

Bates Model No. 39 for Numbering Gangs of Strip Tickets

An Automatic Type-high Numbering Machine. The plunger may be located either above or below the alignment of the figures and the machine imposed in the form to strike upon the tympan outside the margin of the stock or used in connection with sectional ink rollers. Six wheels are usually provided and if an additional figure or a serial letter is required, it is engraved upon a fixture to be attached to the preceding end of the case. When used in gangs of ten machines, similar fixtures are placed upon the end of the case following the figures, engraved with one or two figures, thus providing for skipping ten or twenty and the tickets afterward collated in consecutive order. Made to order only, with any size or style of figures desired.—Circular.

Model No. 39.....\$30.00

WETTER NUMBERING MACHINES

The New Model Wetter is the perfected Type-High Automatic Numbering Machine. Each impression of the press automatically changes the numbers. The Wetter is operated by plunger containing the word "No." to precede the figures; this "No." slide is removable without taking the form from the press and any other character such as "A," "B," etc., can be inserted in its place in a moment. With each machine a "blank" slide is furnished to use in place of the word "No." when working the machines on a job press and when it is more desirable to have only the figures print. The New Model Wetter is constructed of the best materials; parts are hardened where necessary and workmanship the best. All Figures are cut deep, and the faces perfectly flat and sharp.—Circular.

Wetter Model No. 185 for Numbering and Dating Church Envelopes, Etc.

Five automatic wheels precede the dating attachment, and number 33141 DEC 25 1902 from 1 to 99,999, changing at each impression of press. This machine is also fitted with attachment, so that the same number can be printed any number of times, and can be adjusted to do this without taking the machine out of the form.

Model No. 185.....\$30.00

WETTER PLUNGERLESS NUMBERING MACHINE

This is the only typographic numberer for use with or without type on printing presses, that prints nothing but the figures, without "No.," a period, or any other prefix or suffix intended to act as plungers or to prevent the printed sheet from being smeared by the revolving figures. The pressure of the platen or cylinder on the figures operates the mechanism which changes the numbers and also brings into action ingenious bearers which raise automatically and hold the printed sheet off the figures while they are changing. These bearers do not print on or indent the paper. All machines on this list are type-high. Order by Model Number.—Circular.

AUTOMATIC HAND NUMBERING MACHINES

Model No. 50

This new model embodies the highest achievements in the art of numbering machine construction. It has absolutely no equal even in the most expensive machines now upon the American or foreign markets. In its design there have been many departures from the usual plan. Every part is of steel, giving it rigidity and strength with minimum weight. It is made with three movements, consecutive, duplicate and repeat. Machines made to triplicate or repeat any number of times up to ten and advance automatically, made to order at an extra charge of \$1.00. Special letter wheels furnished to order, \$2.00 extra. Only the standard size and style of figures shown in the cut are furnished in stock machines. Other styles and sizes made to order.

Model No. 50 Hand Numbering Machine.....\$15.00

Model No. 49

This machine has been designed to meet the popular demand for a very moderate priced automatic numbering machine of durable construction, capable of accurate work. It is made with three movements, consecutive, duplicate and repeat. Only the standard size and style of figures shown in the cut are carried in stock. Other styles and sizes made to order at an extra charge. Special letter wheels

THE MANUFACTURER'S CARD CUTTER

The Manufacturer's Cutter is a strong machine having a twenty-four inch blade, adapted as a whole to any reasonable work for which such a cutter may be used. An essential feature for manufacturing purposes is the automatic grip or binder which securely holds the work in position before the descending blade begins to cut and throughout its movement.

Manufacturer's Card Cutter.....\$25.00

THE PREMIUM CARD CUTTER

The Premium Card Cutter is a popular, all round machine, with a twelve inch blade, meeting the requirements of a medium sized cutter. A distinctive advantage is secured by a peculiar arrangement of the joint, by means of which a sheet of any length may be cut. By the simple adoption of a spring overhead connected by a cord attached to the handle, the cutter is adapted to rapid work where a great number of small pieces of uniform size are to be cut.

Premium Card Cutter.....\$10.00

STUDIO CARD CUTTER

The Studio Cutter has a ten inch blade and is suited to a class of work lighter than that done by the "Premium." Studio Card Cutter.....\$3.00

CHANDLER & PRICE PAPER CUTTER

This cutter is built from new designs by scientific methods. It has ample metal, properly distributed to withstand strains. Being perfectly counter-balanced, it works quickly and with the minimum of effort. The back gauge and clamp interlock, clamping as narrow as one-half inch. The fingers of the clamp have a broad surface to avoid creasing the stock. All gauges are accurately squared with the knife. The back gauge extends to within one inch of the side gauge, and is divided and adjustable for book trimming or squaring small work. All parts are strictly interchangeable, and accurately fitting replacements may be ordered by number.—Circular.

	WEIGHT	PRICE	EXTRA KNIFE

30 "	1,600	175.00	15.00

"HOWARD GEM" LEVER PAPER CUTTER

This is the original "Howard Gem" Lever Cutter. It has been improved from time to time, and has long been and is still the most popular lever cutter on the market. It is a very heavy, compact and rigid machine; powerful compound leverage makes it cut exceptionally smooth and easy. Clamp has large hand wheel and quick-acting screw. Knife cuts clean and true. It is provided with interlocking back gauge and clamp for cutting narrow widths. It is also supplied with our late "easily squared" split back gauge and stationary side gauges back and front on both sides. Half-inch cutting sticks with eight cutting surfaces same as large ones at one-third the cost. Gibs and setscrews in side frames to take up wear of knife bar. The lever is extra long and heavy, counter-balanced and adjustable to any desired position.—Circular.

	WEIGHT	PRICE	EXTRA KNIFE
30-inch	1500 lbs.,	\$175.00	\$16.00
32-inch	1600 lbs.,	200.00	18.00

RELIANCE LEVER CUTTER

The Reliance is amply braced to insure strength and rigidity. The bed is cross-ribbed underneath, with an extra-wide, brace or flange on the outer edge, and it is additionally strengthened by the heavy center brace. The top arch, which receives the strain of the clamp, is well formed and extra heavy, as is also the knife-bar and clamp. These are reasons why there can be no springing or yielding on the Reliance—features essential to accuracy as well as durability.

The lever system is simple and unusually powerful, rendering heavy cutting remarkably easy. The lever is keyed to the shaft, as is also the crank. The arm connecting knife-bar with crank has a motion in direct line with the motion of the knife-bar, thereby giving the leverage full force and guarding against lateral strain and wear on the knife-bar and slots. The knife, when elevated, is about three-fourths of an inch higher on the right end than on the left. This gives to the descending knife the desirable shear-like motion, cutting smoother and much easier than is the case with cutters having little or no shear cut.—Circular.

	WEIGHT	PRICE	EXTRA KNIFE

BROWN & CARVER PAPER CUTTERS

AUTOMATIC CLAMP AND FOOT TREADLE POWER PAPER CUTTER

The Brown & Carver Automatic Cutters have been perfected so they will cut as accurately as the Brown & Carver Hand Clamp Cutters, and are absolutely unbreakable. The mechanism of these machines is simple and there are few wearing parts. They do not require frequent adjusting. The clamping pressure is applied on the principle of the Brown & Carver Hand Clamp. It is independent of the knife, is powerful and reliable, and can be instantly varied by shifting a lever within easy reach of the operator. With a speed of 30 cuts per minute the Clamp descends gently upon the stock and packs the pile without jarring sheets out of position. The automatic pressure is then applied. The pile is held under uniform pressure throughout the stroke of the knife, and as the three operations of packing, clamping and cutting are distinct and separate, and are performed at different times during the revolution of the machine, the belt power is never called upon for more than one operation at a time and consequently the Brown & Carver Cutters take the least power to operate.—Circular.

BROWN & CARVER **HAND CLAMP POWER PAPER CUTTER**

Cuts work up to one-half inch wide and the knife rises six and one-half inches. The back gauge is in three parts and when split, the section forms a side gauge so that work can be cut near the center of the knife as well as at the side of the machine. The back gauge is close to the side gauge for small work. The knife is bolted solidly to the bar and is instantly adjusted for level or wear by a turn of the connecting rods. The clamp is provided with a flat removable plate for fine work, which otherwise might be marred by the clamp fingers.

OSWEGO POWER AND HAND AND POWER PAPER CUTTER

These are lively running, accurate Cutting Machines. The base is webbed directly under the clamping and cutting strain rendering the machine absolutely rigid. The Clamp rises 4½ inches. The Clamp and Back Gauge interlock allowing work to be cut up to one-half inch. The Back Gauge is in two parts on 26-inch and 32-inch sizes, in three parts on 36-inch size. The Hand Wheel is graduated to insure the movement for Back Gauge. The table is plain (not grooved); front scored in ¼ inch squares with brass rule graduated to sixteenths of an inch, back graduated to sixteenths of an inch. The handles on the clamping wheel render clamping easy. (Round Rim Clamping Wheel furnished if desired). The Friction Clutch is thrown out automatically after every cut and the knife stopped at the top by a positive brake.

26-inch, wt. 2,100 lbs. Power, \$280.00. Hand and Power, \$300.00

ADVANCE LEVER PAPER CUTTER

The Advance Cutters have gibs and setscrews in side frames to take up wear of knifebar. The lever and knifebar are counterbalanced. The knife has a dip-cut, which makes the cutting very easy. It has side gauges on both sides, both back and front. This cutter is provided with "easily squared" back gauge, which also interlocks with the clamp, thus permitting stock to be cut as narrow as three-fourths of an inch. The back gauge is made extra long, which brings it close to the side gauge, enabling both gauges to be used in squaring small stock. A figured scale is sunk in the table for convenience in cutting to measure.

ADVANCE POWER PAPER CUTTER

The Advance Power Paper Cutter is the most substantial paper cutter ever made for the price. It has a side frame protector which absolutely prevents trimmings from wedging between knife and side frame, which is the cause of so many breaks on power cutters. The knife-bar is perfectly balanced, obviating all danger. The dip cut of knife insures easy cutting and economy of power. The throw-off stops the knife at the highest point of stroke automatically. It may be thrown off at any point by hand, in case of error and backed up to save stock. It has gibs and set screws to take up wear of knife-bar; figured rules cut in bed, back and front; "easily squared" back gauge which may be squared with knife in a moment's time; back gauge interlocks with clamp for trimming narrow work, and extends to within one inch of side gauge.

36-INCH CHALLENGE POWER CUTTER

The 36-inch Challenge Power Cutter, is a machine of magnificent proportions and great strength. It is entirely within control of the operator without moving from his position. The automatic throw-off is positive, and the knife-bar is counter-balanced, obviating all danger of the knife running down prematurely. The knife stops instantly at any point when clutch is thrown off. The clamp is geared at both ends, and quickly and easily operated by hand wheel at left of cutter. By this arrangement, also, powerful clamping is secured. This cutter is provided with side gauges back and front on both sides, figured scale cut in bed, back and front; new side frame protector which absolutely prevents narrow trimming from wedging between knife and side frame which is the cause of so many breaks on power cutters.—Circular.

	WEIGHT	PRICE	EXTRA KNIFE
36-inch	2740 lbs.,	\$650.00	\$21.00

PONY ADVANCE LEVER PAPER CUTTER

These "Pony" Advance cutters fill a special field of usefulness. They are unequalled for cutting and trimming labels and small work of any kind, and are valuable alike to small and large establishments, even though larger lever or power cutters be employed. These cutters are first-class in every respect, and equal to the large Advance paper cutters in material, workmanship and finish. They possess greater strength and durability, and are more easily operated than any other cutter of like capacity. Gaugessquared to the knife.—Circular.

16-inch	\$50.00
19-inch	65.00

COMBINATION PAPER JOGGER

It is an admitted fact by those who have tested the merits of the Jogger, that there is nothing in a press-room that will so soon pay for itself as a device for evening up paper. It will take two hours of a good man's time to even the paper from a press one day, say nothing of the sheets that are torn on the edges by

handling uneven paper. These Joggers will save the price they cost from one to four times a year. In ordering, always give size of the largest sheet you want to print. If your table is fitted to the press, give accurate measurements of the same. State the kind of press.—Circular.

FRANKLIN HAND PERFORATOR

Perforates 10 inches and is provided with gauges on both sides, so that the sheets may be turned and fed in again, making a continuous perforated line 20 inches long. Needles make round holes, like the perforation on a sheet of postage stamps.—Circular.

10 inch	\$25.00
---------------	---------

MONITOR ROUND HOLE PERFORATOR

The Monitor Extra Heavy Perforator embodies points of superiority and durability; very massive and strong. The side guides for head are supported by a cross-brace, thereby insuring a true and perfect perpendicular motion. The head is connected with operating shaft below by side rods which are joined to the head by means of a projecting hub, on which the collar of the side rod operates; this removes any possible lateral motion or strain to the perforator head. Bed plate supports lower die thoroughly. Stripper is made on angle steel, preventing springing of stripper in center and avoiding the binding of die and stripper by needles during operation. Needles are in line with center of side rods, assuring a true and perpendicular motion. Every needle is separate and can be removed and replaced independently, and can be sharpened while in machine. Provided with hardwood tables, back and side gauges.—Circular.

IMPROVED GEM PERFORATOR

This machine, the Gem Perforator, is perfect in all its parts, made of the best material, and is the only perforator made which has hardened and tempered steel dies. The perforations are round, as on postage stamps. Needles bent by accident or otherwise can be removed very easily, and others inserted, as the needles are all independent and are not soldered together—a notable fault with other perforators now in use. When needles are worn too short new ones can be purchased for fifty cents per hundred from the dealer. One hundred extra needles, one pair of pliers, one screwdriver, one file for sharpening needles, and directions for operating, sent with each perforator.—Circular.

28-inch, foot power	70.00

BATES TYPOGRAPHIC PERFORATING MACHINES

Models No. 45 and No. 46

This is a machine designed for the purpose of perforating at the same time as the printing operation is performed, without, however, injuring the rollers as is the case with the ordinary steel perforating rule.

The driving head, Model 46, consists of a metal block in which the plunger and a powerful spring are mounted. The blades are made in two and three inch sections which are assembled in line and connected to the driving head, so that any length perforation may be obtained; the

driving mechanism being so located in the form that it strikes the tympan beyond the margin of the stock to be perforated. Dimensions of driving head, 70 x 92 points. Width of perforating blades, 18 points. This plunger, when at rest, is above "type high," and as the impression is made, its depression raises the perforating blade or blades to a position in which the cutters are slightly more than "type high." Creasing or scoring blades may be quickly substituted for perforating blades and used in the same cases with the same driving head. It may be successfully operated upon either platen or cylinder presses, but upon the later it is designed to perforate in line or parallel with the cylinder only. It should be borne in mind, that the character of the perforation is not simply an indentation, but a clean cut, equaling the best pin-hole perforation which is otherwise only accomplished with the most expensive perforating machines at a separate operation. Not only is the entire cost of perforating eliminated but the expense and annoyance caused by the delays invariably associated with a second operation are also overcome.—Circular.

PILOT PRESS

These presses rank as the best of this class in the market, and have never yet failed to give entire satisfaction. They are time savers, as many jobs of card or other work can be put on this press and completed in less time than would be consumed in making ready on ordinary job presses.

The size, 6½ x 10 inches inside chase, embraces all ordinary commercial work. Each press is furnished with one set of rollers, wrench and chase.

6½ x 10 inside chase	\$35.00
With fountain	45.00

THE UNIVERSAL PRESSES

No. 3 Improved Galley Universal

New Styles compared with the old style Universals have heavier shafts, gear wheels, bridges and platens; greater weight, strength and durability; they run faster, easier and smoother, with an almost noiseless movement; they have an improved distribution, improved bridge locks, improved changers, new pattern combination belt shifter and brake, and the least possible liability to breakage in all parts.

They are adapted to all kinds of work, from the lightest card work to the heaviest embossing and wood printing. They are made of the best material, by skilled workmen, from new patterns, with new machinery and special tools, and challenge comparison with any presses ever made, in all the qualities required for perfect printing machinery.

Description of the Three Styles and List Prices

Quarto Medium Universals are equipped with five cast iron chases, one roller mold (for which a set of cast rollers or two cast iron chases will be substituted, if preferred), six form roller stocks, four distributor roller stocks, two ductor roller stocks, six large and six small roller wheels, two iron lateral distributors, two feed tables, three wrenches and treadle fixtures (for which two cast iron chases will be substituted, if preferred). The same parts are included with the Half Medium, except chases, and one steel chase and three cast iron chases are supplied; with the Half Super Royal, Styles No. 1, 2, and 3 two steel chases and two cast iron chases are supplied; with the Super Royal, Style No. 4, five steel chases are supplied. No treadle fixtures are supplied with any of the styles of Half Super Royal, Half Medium, except an additional charge. All Quarto Medium Presses have the single adjuster latch.

Style No. 1

This is the regular press, adapted for general commercial letter-press work.

Quarto Medium, 10x15 inside chase, shipping weight 1,900 pounds.....	\$350.00
Half Medium, 13x19 " " " " " " 2,700 "	450.00
Half Super Royal, 14x22 " " " " " " 2,850 "	515.00

Style No. 2

This style differs from the No. 1 in that it is heavier and stronger in its general build, having a much heavier platen and a heavier fly-wheel for "carrying over" on a more powerful impression. It also has the steel section welded into the rim of the large gear wheel, in which are formed the teeth which are in engagement with the teeth of the driving pinion during the time of the impression.

The Style No. 2 is equipped with our new style double rolling device, which lifts one of the form rollers clear of the form on the downward movement of the carriage, by means of latches, which drop automatically, as the rollers leave the distributing cylinders, and hold one roller off the form by supporting its journal boxes. When the roller carriage passes the lower edge of form, the latches are released by pins coming in contact with stops on frame of press and the roller with a fresh supply of ink, passes over the form on the upward movement.

Half Medium, 13x19 inside chase, shipping weight 2,750 pounds.....	\$500.00
Half Super Royal, 14x22 " " " " " " 2,900 "	575.00

Style No. 3, Combination "A"

For letterpress printing of the highest grade, cold embossing, stamping and all work that can be executed on a platen set to print at the height of type.

Quarto Medium, 10x15 inside chase, shipping weight 2,000 pounds.....	\$450.00
Half Medium, 13x19 " " " " " " 2,900 "	600.00
Half Super Royal, 14x22 " " " " " " 3,100 "	650.00

Style No. 3, Combination "B"

For letterpress printing and (in addition to all work that can be done on Combination A) book-cover inlaying, and cutting and creasing. This combination is fitted with a movable $\frac{1}{2}$ inch steel platen plate and a movable $\frac{1}{2}$ inch brass platen plate, the latter for use in cutting and creasing.

Quarto Medium, 10x15 inside chase, shipping weight 2,000 pounds.....	\$470.00
Half Medium, 13x19 " " " " " " 2,900 "	626.00
Half Super Royal, 14x22 " " " " " " 3,100 "	676.00

Style No. 3, Combination "C"

For letterpress printing and hot embossing (in addition to all work that can be done on Combinations A and B). This combination is fitted with a steam-blank, $\frac{1}{2}$ inch thick, a movable $\frac{1}{2}$ inch steel plate for same, a movable $\frac{1}{2}$ inch steel platen plate, a movable $\frac{1}{2}$ inch brass platen plate and two cast-iron platen plates.

Half Medium, 13x19 inside chase, shipping weight 2,900 pounds.....	\$738.00
Half Super Royal, 14x22 " " " " " " 3,100 "	800.00

PRINTERS' FURNITURE AND TOOLS

Style No. 3, Combination "D"

For letterpress printing, printing on wood (not exceeding 1 inch in thickness), and cold embossing. This combination is fitted with a $\frac{1}{2}$ inch movable cast-iron platen blank, a movable $\frac{1}{2}$ inch steel platen plate, and a movable $\frac{1}{2}$ inch brass platen plate, the latter for use in cutting and creasing.

Quarto Medium, 10x15 inside chase, shipping weight 2,000 pounds.....	\$474.00
Half Medium, 13x19 " " " " " 2,900 "	629.00
Half Super Royal, 14x22 " " " " " 3,100 "	679.00

Style No. 3, Combination "E"

For letter-press printing, printing on wood (not exceeding 1 inch in thickness), hot embossing, and all work that can be done on Combination A, B, and C. This combination is fitted with steam blank and pipe connection, $\frac{1}{2}$ -inch movable cast-iron platen blank, one .405-inch movable cast-iron platen blank, $\frac{1}{2}$ -inch steel platen plate, a movable steel plate on steam blank, and a movable $\frac{1}{2}$ -inch brass platen plate.

Half Medium, 13x19 inside chase, shipping weight 2,900 pounds.....	\$738.00
Half Super Royal, 14x22 " " " " " 3,100 "	800.00

Style No. 4

To meet the demand of those printers who require a larger press than the 14 x 22 inches; to publishers using ready prints, in small towns, for one-page work; blank-book makers and others, who do not have constant need for a cylinder press, we offer the Style No. 4 Universal. This press is built in one size only—17 x 25 inches inside chase, on new lines, and no expense has been spared in this new production. The frame is of a solid, modern design and is proportionately heavier than the 14 x 22 inches; the bridge, fly-wheel, hook connection and cam lever are heavier; the cam-way in the large gear wheel is of an improved design, requiring a larger friction roller; the gear wheel has the steel section in the rim like the Style No. 2 and Style No. 3 Universals; the carriage ways are of a new design, the carriage slot being perpendicular its full length; an adjustable counterweight to balance the weight of the carriage, when carrying one, two or three form rollers is a new feature; this press has the long pinion shaft with the outside floor support like the Style No. 3 Universal and the new style double inking device without springs is a part of the regular equipment.

Style No. 4, 17 x 25 inches inside chase, shipping weight 3,300 pounds.....	\$600.00

Each press is furnished with a steel platen plate, $\frac{1}{2}$ inch thick, (or a brass plate, if preferred,) three chases, two feed tables, power fixtures on press, brake and one wrench.

CHANDLER & PRICE PRESS

The Chandler & Price is heavier and stronger than any other Gordon press, but is constructed upon scientific lines and principles that insure its running easily, quietly and as quickly, as it is possible to feed, without racking or undue wear. The side-arms and shaft are of forged steel. The throw-off is instantaneous, positive and easy to operate, without springs, clamps, or catches. The depressible grippers can not get beneath the rollers. The chase clamp is positive and instantaneous. The distribution is unequalled. The horizontal platen, with long rest, insures speed and ease in-feeding. In short, the Chandler & Price press is the standard of excellence in Gordon presses. That it is the cheapest in the long run is proved by the thousands in successful use for many years. Every press is given an expert's severe test before leaving the factory. This test of the complete machine, after the rigid scrutiny of all parts during their making, is the good reason why not one press out of more than 23,000 has been found defective in material or make. It is better to detect than to have to correct.—Circular.

WASHINGTON HAND PRESS

Printers who have been accustomed to using the Washington Hand Press will appreciate the radical improvements made in the press which we offer to the trade. It is made from new patterns, and all parts are interchangeable. The platen is strengthened by transverse ribs, and the bed is made heavier, to resist the force of the impression and make it uniform at all points. The lever support is strengthened by a brace extending upward against the frame. The bed trucks are stronger, and the studs, steps and points are all of steel, hardened.—Circular.

Price includes one screw wrench, one ink brayer, one pair bearers, and ink slice; also boxing and cartage. Extra bearers per pair, 50 cents. Extra friskets, \$3.50 to \$6.00.

As a rule we can supply second-hand Washington Hand Presses of all sizes on demand.

CHALLENGE-GORDON PRESS

Recent patented improvements place this in the front rank of job presses. The patented impression throw-off is the only device that holds the eccentric shaft absolutely stationary both on and off the impression. The ink disc is large, and noiseless in operation, is highly polished, easily cleaned and no grooves to harbor dirt; this is especially desirable for color printing. The platen is counter balanced, prevents wear on cam and cam roller. In presses with this improvement in use five years the cams are as perfect as the day they left the factory.

The platen of 10 x 15 and smaller sizes have extra heavy truss ribs in center; the 12 x 18, 13 x 19 and 14 x 20 have five impression screws; the 14½ x 22 has six—insures a rigid and true impression. Gear wheels are extra wide and the cam-way and cam roller are broad, giving extra strength and wearing surface. The cam roller and stud are made of tool steel, tempered and ground to micrometer gauge. Patented depressible gripper-bar and grippers are the simplest and best. The bar is malleable iron, with groove to hold grippers, prevents swinging and injury to forms. The grippers are slotted for use on close margins. Forged steel crank-shafts and connecting rods on all sizes. The 12 x 18 and all larger sizes have cut steel pinions, also new style folding feedboard. Instantaneous chase lock fastens or releases the chase without soiling the fingers. Each press is supplied with foot brake and gauge pin holder. All bearings are carefully fitted, hence smooth, easy running and perfect in every movement. This is the secret of accurate register for which the noiseless Challenge Gordon is noted.—Circular.

B. B. & S. PRESS BRAKE

For all Gordon and Other Presses

A simple, durable and effective Job Press Brake. Made of cast iron. Easily attached to any platen press. Belt can be run on fly wheel if desired. Stops press instantly, thus avoiding accidents and expensive repairs. A trial is the most convincing argument.

- Size No. 1—Shipping weight 18½ lbs., fits 7x11, 8x12 Gordons \$5.00
- Size No. 2—Shipping weight 21 lbs., fits 9x13, 10x15 Gordons 5.00
- Size No. 3—Shipping weight 22 lbs., fits 12x18, 13x19 Gordons and 10x15 and 13x19 Universals and Colts Armory 5.00
- Size No. 4—Shipping weight 22 lbs., fits 14x22 and 14½x22 Gordons and 14x22 Universals and Colts Armory . . . 5.00
- Size No. 5—Shipping weight 22 lbs., fits 12x15 and 15x21 Golding Jobbers 5.00

Special Brakes can be furnished for any press if the following dimensions are given: The diameter of the fly wheel; the distance from the fly wheel to the floor, and the distance from center of fly wheel to front of press.

THE OPTIMUS TWO-REVOLUTION PRINTING PRESS

On pages 164-175 of this Speciman Book we have given an extended description of the Optimus, which includes the No. 43 and the Pony presses. Therein we set forth the reasons why it is the superior machine it is. The record of the Optimus makes it worth the consideration of every good printer; and to one at all interested in presses of this style we suggest that a perusal of what we have said will be worth while. The better printer the inquirer may be, and the more exacting his demands for the production of high-class work, economically and speedily, the more will this press appeal to him.

The Optimus is simple, strong, fast, and enduring, the least complicated of all two-revolutions, with the least number of parts.

No matter what its use may have been in length or amount of service, register between bed and cylinder is exact and unvarying.

An even, unyielding impression is secured by great strength in the cylinder, shaft, journals and boxes, and a solid support of six tracks under the bed of medium and large sizes, which are in turn supported by the most massive center-girt in any press. Four of the tracks are quickly adjusted for wear.

The patent cylinder lifting device is simply an eccentric box holding the cylinder journals. Impression is always taken when the eccentric is on the center. There is no strain, therefore, on connections. There is no counter-balance. The Optimus is the only press wherein the cylinder boxes are fixed as a part of side frames, and do not slide up and down with the cylinder. The side-frames, therefore, are made to bear the brunt of impression contrary to the general practice.

The cylinder is adjusted by a short and very heavy steel screw so fitted into the box that all strain is taken upon its head. This screw will sustain fifty times the strain that it ever will be called upon to endure.

The Optimus bed and cylinder mechanism embraces the patent ball and socket motion. It is the only device insuring a perfectly uniform movement, and absolute register between bed and cylinder. It is the simplest, and perfect mechanically. It makes possible a large driving gear, which consumes one-third of its time in reversing the bed. With the air spring this avoids all jar, and results in smooth running at the highest speed known to two-revolution presses, without wear to forms. It also affords the great advantage of driving bed forward and back from same point of contact.

The rack is not in the center of the bed but in the center of the load. The rollers, geared direct to one end of the bed, require a large amount of power to drive. The rack is located at the proper point from center of bed to bring it in the center of load.

The patent overbalanced piston head is adjusted without any tool, stays where placed, is always

No. 43 Optimus

Pony Optimus

air tight, and wear can be taken up quickly. The patent controlling device holds the sliders under bed in position.

Table and form rollers are geared to the bed positively, and are interchangeable, except on ponies. On all sizes except ponies, ink passes from fountain to vibrator on first pair of table rollers. It cannot reach the plate until one complete revolution of press has been made, when it is as well distributed as it is when placed on forms by some two-roller machines. The Optimus distribution is the best in the world.

The patent roller bearings hold both form and table rollers firmly locked in contact with form (or table) and vibrator, or quickly release them, both operations being by a simple movement of the hand, and independent of the device for adjusting contact.

There is a patent safety gripper mechanism. It is noiseless and absolutely accurate.

The back-up is used as a brake.

The famous front delivery of the Optimus is one of its great advantages over all others. It requires no adjustment for varying sizes of paper, and delivers printed side up in plain view of feeder and pressman.

It is easily and quickly disconnected to give access to form in front of cylinder, in which position press can be run.

The extreme rigidity of the Optimus makes it extremely fast in make-ready, and this added to its unequalled speed in operation makes it the fastest two-revolution in use. At highest speed it runs easily and almost noiselessly, the quietest known. It is the only press that does not gutter.

We emphasize the advantage of the Optimus in its little need of repairs. It is a real, positive, extraordinary fact. Optimus simplicity, Optimus strength, Optimus construction make repairs practically nothing during the life of the press. Not only is money saved, but delays that aggravate and disorganize are avoided.

Cylinder Exposed for Make-Ready

Optimus Center-Girt and Tracks

Dimensions, Speed and Weight of Optimus Presses

Each press is boxed, and delivered f. o. b. cars or dock at factory, and is furnished with steam fixtures (or arranged for belt attached electric motor); one set cast rollers, one extra set roller cores, counter, slitler, wrenches, oil cans, and hard packing.

Form Rollers for Nos. 3 to 6, inclusive, are three inches in diameter; on No. 7 and larger, three and a half inches. Form and table rollers interchangeable on No. 43 and larger.

THE STANDARD AND REGULAR DRUM CYLINDER PRESSES

Babcock Standard Press

The Standard in sizes Nos. 6 and 7 is used on weekly and daily editions of newspapers in the smaller cities; by publishers of monthly religious, medical, insurance, women's and other journals; for reprints of popular fiction, etc. In some instances presses are equipped with automatic feeders, and a heavy output is secured.

This press presents a great advantage in its bed drive, a perfect and mechanically correct motion for operating a reciprocating bed, and the best ever used on a drum cylinder. To this more than to any other thing, except painstaking construction, is due its almost noiseless operation, its little wear to forms, its exact register and high speed. It has a patented high fountain, affording much greater distribution than is usual in the rack and screw press; has noiseless safety gripper action, air springs, back-up, controlled sliders, adjustable fly fingers, counter and slitter. The eccentric roller bearings make it possible to quickly throw form rollers out of action, and then to pass an unlocked form back and forth under them without picking up type. Handy when making changes on press.

The Standard is very satisfactory as a job press. Nos. 2 and 4 are used almost entirely by job printers. No. 2 is particularly handy for all sorts of work, taking a 19 x 25 sheet and less. One customer who keeps several pony Standards busy, objects to sending us specimens of high grade work because he does not wish printers generally to know that his splendid work (in colors of many printings) is produced on a press of low cost.

We make the Standard with table distribution also, and call it the Regular. This style of distribution is preferred by a number, and for some classes of work it is better than the other. It offers those advantages which make this distribution essential on two-revolution presses. It gives a thorough breaking and working of the ink, and furnishes an even and uniform supply to form rollers.

The No. 4 takes a 25 x 38 sheet, and prints a seven-column folio; the No. 6 prints a six-column quarto, and the No. 7 a seven-column quarto. Like all Babcock presses each machine is a specimen of high-class mechanical construction and finish, from materials the best possible to obtain, and each is furnished with steam fixtures complete (or arranged for electric motor), one set cast rollers, one extra set roller stocks, counter, slitter, hard packing (or rubber blanket), wrenches and oil cans. Boxed and crated, and delivered f. o. b. cars at factory.

Please see extended description on page 176.

THE BABCOCK FAST NEWS AND JOB EXPRESS PRESSES

New No. 7 Express Press

A speed of 2600 an hour is high for a flat-bed press large enough to print four pages of a seven-column quarto. If it can do this easily, and still do better quite as well, it must have attractions for the daily publisher in the small cities, especially if the price is as enticing as the press itself.

The Babcock No. 7 Express has a bed 38x51, with a short run, and a three-to-one star gear. Its speed lies in these. The short run of bed requires a special inking arrangement. This consists of a fountain, with the usual composition rollers, vibrator and ductor, back of cylinder. The two form rollers here do not quite cover the form. In front of cylinder there is a form roller with geared vibrator that passes entirely over the form, and equalizes the ink over its whole surface, including the narrow strip at the front of bed not previously covered by the rollers in the rear. The arrangement is both efficient and sufficient: in fact it has been used for years on the Babcock Dispatch fast press, with even a shorter bed run.

In front of cylinder the bed is entirely free for putting on and taking off of forms, for changes and corrections. Motor drive is quickly possible. The press is constructed in the most substantial manner, with Babcock quality throughout. It does excellent work at speed, and is shipped complete with every necessary part, so that when installed, with form on bed and ink in fountain, it is ready for business, and a lot of it.

The No. 3 (Pony) Express is away ahead of anything of the kind ever made. It possesses all of

No. 3 Express Pony

our patented features with some that are its own exclusively. Its great speed (3600 an hour), its ease and smoothness in operation, its accuracy in register, make it valuable for everything within the compass of two rollers no matter how fine or exact it may be. No quality needed in first class printing has been neglected. There is, too, a lot of low priced work that can be done on this machine at a profit because of its low cost and high speed.

Compared with the Pony Standard, a very popular small drum, the No. 3 Express, printing a 21x28 sheet, is larger, heavier, stronger, and fifty per cent faster. It is, in our opinion, the ideal pony drum, and we recommend it unreservedly for all work within its capacity.

The description of the No. 7 Express on page 178 does not apply to the later New No. 7 shown here.

DIMENSIONS, SPEED AND WEIGHT OF FAST EXPRESS PRESSES

Each machine is supplied with steam fixtures, or arranged for belt attached electric motor, one set cast rollers, one extra set roller stocks, counter, slitter, rubber blanket, wrenches and oil cans. Jogger is included with both. Boxed and delivered f. o. b. car at factory.

7	38x51 inches	33 x 47 inches	2,600	9 ft. 9½ in. x 5 ft. 6 in.	13 ft. 9 in. x 9 ft. 10 in.	13,500

For Silver-Gloss Steel Electric-Welded Chases see pages 902-908

THE DOUBLE-FEED DISPATCH NEWSPAPER PRESS

Faster than the No. 7 Express, heavier, and only for newspaper and like work, is the Double-Feed Dispatch. It is an old favorite and is intended particularly for the printing of the daily in the smaller cities. It is the fastest single cylinder flat-bed press of its size ever made, either drum or two-revolution. The bed runs just far enough to print the form, which is inked from both ends. For this purpose there is a high fountain, with vibrators and rollers, in front, and another in rear of cylinder. The short run of the bed has the advantage of materially reducing the size of the cylinder, which is not as large as it would be in an ordinary drum having bed of same size. The driving gear is three-to-one, and this with its heavy construction, short travel and double inking, gives a speed unknown to other flat-bed machines. It is quite as simple to operate as the ordinary drum.

Its special service alone has been considered, without any attempt to fit the Dispatch for anything else. For its purpose it has no rival. It is the only machine of its kind, and fills the gap between the ordinary drum and the perfecting press. For evening editions of 3500 or so there is no press as satisfactory. A larger morning edition can be printed as then there is more time.

The Dispatch is made in one size only, a seven-column quarto, bed 39x52 inches, with a speed, on a good foundation, of 3000 per hour.

On special orders it can be built single-feed, which has as great speed as the double-feed; but this style requires the services of a very expert feeder to utilize the full capacity of the press. The double-feed permits the use of two feeders, each of whom is required to handle sheets to half the speed of the machine with a greater certainty of securing it. A double-feed can be run as a single-feed, the change requiring but a

moment's time. It is usual to run the first side with one feeder, and the last with two. Either feed-board may be used with one feeder, and but one folder is necessary. Either feeder has full control of the press.

Compared with a flat-bed perfecting press the Dispatch possesses all the advantages required for the average circulation in the small cities. Not only does the former cost more than twice as much, but it requires more power, more space, higher priced labor, and the wastes are greater. Add the depreciation and interest on the increased cost, and the whole makes the expense for printing the average country daily antagonistic to an adequate profit, and far in excess of that incurred should the Dispatch be used. This machine requires a small investment, ordinary skill and experience, little power, little space, and makes little waste. It most satisfactorily solves the principal problem confronting the publishers of papers within its capacity.

All there is of the Optimus Driving Motion

DIMENSIONS, SPEED AND WEIGHT OF BABCOCK DOUBLE-FEED DISPATCH PRESS

THE LOW-PRICED RELIANCE DRUM

The Reliance Drum Cylinder Press

This press is made in one size only, to print a six-column quarto. It is a high-class drum cylinder for the smaller offices where but one cylinder press is needed for both newspaper and job work. It is made with either rack and screw, or table distribution. Has air springs, and is tapeless. All gears are cut. With its noiseless safety gripper motion, it runs easily and quietly at the guaranteed speed of 1500 an hour. Eccentric form roller bearings are furnished by means of which it is possible to quickly lock the form rollers in place, or to throw them out of contact with vibrator and form. In this last position an unlocked form can be passed back and forth under the rollers without picking out type, an arrangement that will be appreciated when changes on press are necessary.

The Reliance is thoroughly well built. It is the best ever made in its class. It is sold at a low price to be the most satisfactory machine at anywhere near its cost. As we have been selling it for a quarter of a century or more, our experience with hundreds of them has been most satisfactory, and has been sufficiently long to be of the utmost value to our customers. We recommend this machine unreservedly for all work within its capacity.

We sell many more of the rack and screw style of distribution than of the table. The latter costs something more, and perhaps that has something to do with the sales; but if one has quite an amount of job work to do, running from posters to good book and circular work, the table distribution is the best. It not only gives a more thorough breaking and working of the ink, but often it is possible to make a short run in a color without washing up the fountain, the ink being put on the table with a brayer. This will be a considerable saving in time and ink.

With rack and screw distribution, where the fountain is close to the cylinder, the bed is readily accessible from the front of the press, and forms are more quickly placed and lifted than with table distribution, where forms must be handled from rear of press after removing fly.

One user says: "The Free Press is printed on a Babcock Reliance Country press, with table distribution. It is a good press, and has done me excellent service for five years. It will do poster work, and all job press work required in a country office. The press work on the paper speaks for itself."

Workmanship and materials are of the best. Each press is furnished with steam fixtures complete (or arranged for belt attached electric motor), one set of cast rollers, one extra set of roller stocks, rubber blanket, wrenches and oil cans. Boxed and crated, and delivered f. o. b. cars at factory.

This press is further described on page 176.

THE DIAMOND CYLINDER PRESS

The Diamond is the up-to-date press for the country publisher. It is made to meet his wants and in design, material, construction and workmanship, the highest standard is maintained. The frame is strong and compact. The iron being put where it is needed and the appearance of the machine is fine and symmetrical.

The ink fountain is the celebrated Challenge Book Fountain, with screws conveniently placed to regulate the supply, furnishing the ink to a ductor roller which then carries it in turn to a vibrating roller resting upon the two form rollers. These ink the form in both directions as it is carried back and forth on the bed of the press beneath the cylinder. The rollers can be easily and quickly removed for cleaning.

The cylinder is heavy and unyielding under the impression strain; the journals at both ends run in anti-friction, oil retaining roller bearings, a single, simple screw and lock nut at each end of the cylinder adjusts the impression to a hair. The bed is heavy, finely machine finished, evenly balanced; the motion is made free and easy by bearing upon three anti-friction steel rollers on the line of impression, making it absolutely rigid. The feed board is large, made of white pine, varnished; has just enough pitch to insure easy feeding.

It has sockets to fit over supporting standards and can be removed instantly by simply lifting it off, and can be put back without any adjustment of any kind. The sheets are neatly delivered by a fly, printed side up, on a finely finished white pine delivery table.—*Circular.*

No. 6 14 Steam Power Machine is a six-column folio; size of bed 24 x 32½ inches; will print any smaller size sheet without any special adjustment; floor space 40 x 43 inches; the delivery table extending 30 inches back of the frame; speed 900 to 1200 impressions per hour; shipping weight 2500 pounds..... \$450.00

No. 4 Hand Power Machine is a six-column folio; size of bed 24 x 32½ inches; will print any smaller size sheet without any special adjustment; floor space 40 x 43 inches; the delivery table extending 30 inches back of the frame; speed 700 to 900 impressions per hour; shipping weight 2100 pounds..... \$350.00

Each press is furnished with Felt Blanket, set of Cast Rollers, extra set of Roller Cores, Fly Table, Wrenches, Oil Can and Screw Driver. The Steam Power Series, in addition to the above, has Tight and Loose Pulleys, Shifter and Fly Wheel. Rubber Blanket furnished in place of Felt at an additional cost of \$4.00. Felt Blanket complete with trimmings, \$18.60. Rubber Blanket complete with trimmings, \$22.60. Steam Power Attachments (for Hand Power Presses), \$125.00.

PRESS BOARDS

28 x 42 inches, each	\$0.50	40 x 60 inches, each	\$1.00
30 x 45 inches, each	.60	45 x 60 inches, each	1.20

ELECTRIC PROOF PRESS

This is a self-inking proof press which is designed to be operated by an electric motor. Power required for an ordinary 16-candle power light is ample to run the press, the expense for same being merely nominal. If desired it may be operated by hand by using the crank attached to the sprocket shaft at the right hand end of the bed, as shown in the illustration. The press stands on a strong pedestal, and the bed is supported by four braces extending from the top of the pedestal to the four corners of the bed. The motor is set on a strong bracket near the base of the pedestal at the rear, and is connected by a short belt with the friction clutch pulley at the rear of the press at the right hand side. The depression of the pedal at the base of the pedestal operates the friction clutch and throws the pulley into mesh with the crank shaft. To stop the press it is only necessary to release the pedal, thus throwing the pulley out of gear and automatically applying a quick stop brake. The entire press is thoroughly made and finished, and is fully guaranteed for fast and accurate work. It is being used successfully in some of the best and largest printing and publishing offices in the country. Twenty-five proofs per minute can be easily taken, equaling that of four ordinary galley proof presses. It gives a sharp, clear impression over the whole form.—*Circular.*

Bed, 10 x 29 inches, with motor, complete..... \$210.00
Bed, 12½ x 29 inches, with motor, complete..... 265.00

In ordering, state voltage of current by which motor is to be driven. With each press a set of cast rollers is furnished.

PROOF PRESSES

This press is a great improvement over the old-style proof press. The circumference of the cylinder or roller, is the same measurement as the printing surface of the bed, the cylinder revolving once from stop to stop. Notice particularly that these are extra heavy machines. The No. 1 cylinder weighs 85 pounds, and is ample weight for a full galley proof. Other cylinders of proportionate weights. The cylinder is covered with a felt blanket, and a brayer is furnished with each press, excepting those without iron stands. Nos. 1 to 5 have shelf for paper underneath the cabinet.—Circular.

STERLING ROUND CORNERING MACHINE

In the Sterling Round Cornering Machine printers will find the most useful and comprehensive machine yet offered to the trade. Its thorough construction and simplicity of operation, together with the amount and high quality of work it is capable of doing, makes it without an equal. The machine is self-clamping and very rapid. Every part is made with the utmost care. It is the most popular machine for the purpose ever devised and over 5,000 of them have already been sold. The operation is so simple that any boy can round corner 1,000 cards in a few moments with hardly any cost. Booklets, Calendars, Menus and an endless variety of work, usually turned away or farmed out, can now be taken at a good profit. The Sterling is like the "Elastic Book Case" always complete but never finished.

Perforating Attachment

Perforating Attachment

The Perforating Attachment which we here illustrate can be added to any Sterling and will prove a great convenience. The system of gauges is the finest ever devised and they can be instantly adjusted for handling any particular size or shape of work, and are so constructed that adjustments can be made to the hundredth part of an inch. When you add this attachment to a Sterling you will have the best 10-inch Perforator on the market.

Round Cornering Machine

Punching Attachment

The Punching Attachment will be found very useful and profitable for punching round holes in cards, paper, etc. The fast operation and capacity of the machine makes it desirable for the printer to have this attachment, owing to the large demand for loose sheets in the modern filing systems.

Punching Attachment

Stabbing Attachment

Every printer finds it necessary now and then to do a job of bookbinding. With this attachment a printer can do a very successful job on check books, etc., or where he would not have work enough to warrant the installing of a wire stitcher, which are very expensive; and even the large printer and book binder finds it a very useful attachment owing to its powerful and quick working properties.

Stabbing Attachment

Pedestal Foot Power Attachment

We illustrate the Pedestal Foot Power Attachment on which a Sterling can be mounted in a few minutes, allowing the operator to sit down when using the machine, leaving both hands free for guiding the stock. It will be appreciated by every owner of a Sterling.

Pedestal Foot Power Attachment

PRICE LIST OF MACHINE AND ATTACHMENTS

Round Cornering Machine, with one knife	\$15.00
Pedestal Attachment	15.00
Treadle Attachment, additional	10.00
Punching Attachment, additional	10.00

E. S. " " "	.55
Loose Leaf Punching Attachment	12.00
Card Index Punch Head	7.00

NOTE—The Eyelet Attachment is used on the Punching Attachment. It cannot be applied to the Round Corner Machine alone. Eyelets packed in boxes containing 5000.

MONITOR MULTIPLEX POWER PUNCHING MACHINE

This machine is 30 inches wide and is furnished with six standard round hole punches, dies and blocks complete, as shown in cut. The position of the punch and die can be changed instantly by moving a lever on side of machine to a perpendicular position. This head will punch paper $3\frac{1}{4}$ inches from center of hole to edge of paper. We also furnish separate punch and die blocks for punching holes any distance from edge of paper if desired. The frame is very heavy, solid and substantial. The material is of the best and finish superb.—Circular.

Including 6 Round Hole Punches.....	\$250.00

Motor and Attachment by Gear, complete, 110 and 220 Volts.....	100.00
Speed Regulator, extra.....	10.00

THE PRINTERS PUNCH

The Printers Punch is a substantial and first class machine and offered at a moderate price. The punches are constructed without any springs and move straight up and down, avoiding the friction and wear caused by any but a direct up and down movement, thus making it the most durable and economical of all punches.—Circular.

No. 2, hand power	\$ 22.00
No. 7, foot power, without stand	50.00
No. 8, foot power, without stand	65.00

No. 8, foot power, with iron stand.....	90.00
No. 9, steam power	115.00
No. 10, steam power	130.00

No. 2 will punch holes up to $8\frac{1}{2}$ inches from center to center; Nos. 7 and 9, 11 inches and Nos. 8 and 10, 18 inches. Prices given above include two round punches with each machine.

MONITOR DUPLEX POWER PUNCHING AND ROUND CORNER CUTTING MACHINE

For offices whose requirements for punching of paper do not necessitate the use of such an elaborate machine as Latham's Monitor Multiplex Power Punching Machine, we herewith present a less costly machine operated by power, which will punch paper of same thickness and as quickly as the Multiplex, and it can also be used as a power round corner cutting machine, covering the use of two separate machines and saving space and power at practically one-half the investment. This machine is furnished with combined punch and die blocks that will punch holes $3\frac{1}{4}$ inches from edge of paper, and paper of any width, as there are no obstructions on sides of the machine. Maximum distance between center of holes that can be punched, 14 inches; minimum, $1\frac{1}{2}$ inches. Combined punch and die blocks will allow for punching holes $3\frac{1}{4}$ inches from edge of paper, and will punch through $\frac{1}{2}$ inch in thickness. Three round corner cutting knives are furnished with corner cutting attachment.—Circular.

Complete with two punches and dies, without round corner attachment..	\$140.00
Round corner attachments, extra.....	25.00
Extra punch and die blocks, each.....	5.00
Extra round hole punches and dies, per set, upper and lower die.....	2.50
Special punch and die and block for loose leaf ledger standard sizes, each	12.50
Extra round corner cutting knives, each.....	1.50

BULLOCK PRESS PUNCH

One or more may be locked in a type form and will cut a clean, round hole $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, or $\frac{3}{4}$ inch, in paper or card stock, the same time the job is printed. This punch will not clog, as each piece cut is automatically ejected by the plunger as soon as the impression is released, and falls on the floor. The ejector also protects the rollers from any danger of injury from the cutter. All parts being interchangeable, new cutters can be readily fitted in case of accident. The spring for controlling the ejector can also be made stronger by turning screw at the bottom.—Circular.

THE MORTON LOCKUP

Direct Spread No Slide No Spring of Form

An Iron Side-Stick, with broad bearing, (true and square), attached to the best machine-finished steel Quoins. The quickest, safest and most complete Lock-up in use—all in one piece. Place directly against the type, furniture or chase, as most convenient; give the key a half-turn, and the work is done. No time wasted, no skew, and no quoin can drop out. By this method of imposition, all looseness, bowing or springing of the form is impossible.

SLAUSON CYLINDER PRESS LOCKS

The Slauson Cylinder Press Locks are made of flat drawn steel tubes which telescope one into another and are drawn out to fill a given space and then locked by an ordinary Hemple key. The quoin which is in the form of a coil or snail, has an extension of two picas and is absolutely safe. The parts are dropped steel forgings. The chief value is on the beds of cylinder presses where forms are being locked that are smaller than the beds. They are almost as quick as a flash and they hold a form solid to the bed, taking out the spring of a chase and preventing the working up of material inside. Pressmen appreciate them for this value even more than for the time they save. With these locks the press clamps are not used for locking the form but are tightened at the start. The chase is squared against the clamps and the locks "do the rest." They work equally well behind the chase or between chase and bearers. Another good use is inside cylinder chases where otherwise a lot of wood furniture would be used. For example a long, narrow heading can be locked in a full-sized chase, a wide strip of furniture intervening or a steel bar. In this use foot piece of the lock comes against the form. In all cases quoin end comes against the chase.—Circular.

PRINTER'S SAW TABLE

This is the regular saw table for printer's use. It is designed for cutting and trimming cuts, wood or metal furniture, reglets, slugs, brass rule, leads, etc. Accurate squaring up and parallel gauges are furnished. The table on the right hand side extends outward, and that side is fitted in as a shootboard and plane. The table is raised and lowered by a hand wheel under the front edge of the table, as shown in the illustration. A shelf attached to the pedestal provides a handy receptacle for tools. Slug cutting attachments can be had for use with this table, making it in effect a linotype saw. The slug cutting attachments may be used on any Saw Table having an adequate parallel gauge. They can be used for trimming to size all such material as leads, slugs, reglet and furniture, and are accurate and reliable.—Circular.

PATENT COPPER AND BRASS THIN SPACES

One of the handiest things a printer can have is a full assortment of Patent Copper and Brass Thin Spaces. To use them once is to appreciate them. They are made in two thicknesses, one-half and one-point, and are cut upon order for any point body. The half-point spaces are made of copper and the one-point of brass, so that different thicknesses may be distinguished at a glance. They are accurately cut by machinery; are cheap, never break, and never wear out. These spaces are put up in fonts of different assortments as follows:

Wooden Case contains 10 oz. of one-half and one-point thin spaces assorted in sizes from 6 to 72 point.

Cardboard Box, contains 10 oz. of one-half and one-point thin spaces assorted in sizes, 12, 18, 24, 36 and 48 point.

Font No. 1, containing 16 oz. of One-Half Point Copper Thin Spaces, cut the following sizes: 6, 8, 10, 12, 14, 16, 18, 20, 24, 30, 36, 42, 48, 60, 72 point. Put up in neat wooden case.....	\$1.75
Font No. 2, containing 16 oz. of One-Point Brass Thin Spaces, cut the following sizes: 6, 8, 10, 12, 14, 16, 18, 20, 24, 30, 36, 42, 48, 60, 72 point. Put up in neat wooden case.....	1.75
Font No. 3, containing 16 oz. of One-Half Point Copper and One-Point Brass Thin Spaces, cut the following sizes: 6, 8, 10, 12, 14, 16, 18, 20, 24, 30, 36, 42, 48, 60, 72 point. Put up in neat wooden box...	1.75
Font No. 4, containing 10 oz. of One-Half Point Copper Thin Spaces, cut the following sizes: 12, 18, 24, 36, and 48 point. Put up in cardboard box.....	1.00
Font No. 5, containing 10 oz. of One-Point Brass Thin Spaces, cut the following sizes: 12, 18, 24, 36, and 48 point. Put up in cardboard box.....	1.00
Font No. 6, containing 10 oz. of One-Half Point Copper and One-Point Brass Thin Spaces, cut the following sizes: 12, 18, 24, 36 and 48 point. Put up in cardboard box.....	1.00

Ounce and Pound Prices

We cut upon special order any point body, from smallest to largest size and furnish same in 2-ounce packages of either the one-half point copper or one-point brass or 2 ounces of copper and brass assorted at a price of \$0.25 per package of any one size. Also sold by the pound as follows: 5 point, \$2.50; 5½ point, \$2.25; 6 point, \$2.00; 7 point, \$1.85; 8 point, \$1.75; 9 point, \$1.65; 10 point, \$1.55; 11 point, \$1.45; 12 to 16 point, \$1.40; 18 to 30 point, \$1.35; 36 point and larger, \$1.30. A pound may contain either brass or copper or both.

PLATE MOUNTS

These mounts will be found invaluable at make-up table, as supports to the thin plates cast from Advertiser's Matrices. By use of these mounts, the time and waste of metal by melting, incident to making thin plates type-high before the make-up can handle them, is saved. Cast from hard metal, shaved accurately to required height,

cut from one inch to full column length, varying by ½ inch steps as desired; 13 ems or 26½ ems wide. When ordering, send sample of thin plate so height of mount can be made correct.

Single or double column, in any length up to 20 inches, per pound..... \$0.25

METAL SECTIONAL BLOCKS

Metal Sectional Blocks are made from extra hard metal, cored on their under sides to lighten them. They are sufficiently heavy for the most exacting impression of half-tone or tint plate.

The most economical bases for plates of all kinds. They hold the plates securely and save one-half the time of make-ready. Save plates from injury because they do not bend or warp them. As easy to make-up as metal furniture, and are as necessary to a pressroom as the modern cylinder press.

Sizes, 16 x 16, 8 x 16, 8 x 8, 4 x 8, 2 x 8, 2 x 6, 2 x 4, 1 x 8, 1 x 6 and 1 x 4 ems, per pound\$0.25

LITTLE GIANT REGISTER HOOK

Size 6 x 6 ems. Made from solid Brass. The screw and slotted head are in one piece, cut from steel and tempered; the clutch is also made of steel, and there are but four pieces to each hook. It is actuated by a steel key.

Especially designed for fine register and color printing. Hooks are placed on all sides of the plate, and by use of the steel key the clutch on one side is released and the one opposite is tightened, the plate being easily moved the smallest fraction of an inch.

Little Giant Register Hooks, 6 x 6 ems, each.....\$1.00

EUREKA REGISTER HOOK

Eureka Register Hooks will enable you to place plates within eighteen points of each other. They are so constructed that the operating mechanism follows the clutch—one plate can be moved and the adjoining one follow it without interfering with the operating mechanism—the narrow margins are in this way preserved. Made from solid brass, clutch and screw of steel. Slotted head of steel, tempered.

Eureka Register Hooks, 6 x 6 ems, each.....\$1.00

STEEL KEYS FOR REGISTER HOOKS

Steel Keys, 2-inch, each.....\$0.05
Steel Keys, 4-inch, double end... .20

SWIVEL REGISTER HOOK

Made from solid steel and brass. The center portion is the well known Eureka Register Hook so mounted that it will turn in any direction even after being locked up in form. By use of these hooks an irregular plate can be held perfectly or any plate can be placed at any desired angle in the form. The Hook being swiveled adjusts itself automatically to the position desired. These Hooks can be used as plain register hooks when the swived feature is not needed.

Swivel Register Hooks, 8x8 ems, each.....\$1.50

QUICKEST REGISTER HOOK

Especially designed for book work where it is desirable to change from one plate to another quickly. One turn of the key moves the clutch far enough to release the plate. By this it will be seen that the Quickest Hook is quicker than a ratchet Hook with the additional advantage of doing away entirely with the necessity of placing the low slugs around each page. Made from solid brass. Clutch and screw of steel. Slotted head of steel, tempered. There are but four pieces to each Hook.

Quickest Register Hooks, 6x6 ems, each.....\$1.00

KYLE REGISTER HOOK

Designed for the narrowest possible margin. Plates can be placed within eight points of each other. This just allows room enough for the steel key. The Kyle Register Hooks, like the Eureka, permits the plates to be moved in both directions, even when used for the very narrowest margins. Made of solid brass, clutch and nut of steel.

Kyle Register Hooks, 6x6 ems (right or left), each.....\$1.10

PONY NARROW MARGIN HOOK

Brass body, steel screw and clutch. General construction same as Little Giant, except that it is worked with a ratchet instead of a key. Used where register is not a necessity. For strength, durability and accuracy it is equal to the large hooks.

Pony Narrow Margin Hooks, 6x7 ems, each.....\$0.90
Brass Ratchet, each......50
Steel Ratchet, each......75

BRASS CATCHES

These Brass Catches are made in the lengths given below (or in any length on special order). If not otherwise instructed all orders will be filled with the eight em length.

1x 4 ems Brass Catches, each.....\$0.10
1x 6 ems Brass Catches, each......12
1x 8 ems Brass Catches, each......15
1x 16 ems Brass Catches, each......25

QUETSCH RAPID REGISTER HOOK

Is a high grade register hook suitable for registering the finest three-color plates, and at the same time is quite as rapid as an ordinary ratchet hook. As the jaw has an adjustment of about two picas, it is equally desirable for either fine color printing or ordinary book work. The body of the hook is made of solid brass and the working parts of steel.

Quetsch Register Hook No. 1, 6 x 8 ems.....\$1.00
Quetsch Rapid Register Hook No. 2.....1.10
Key for Quetsch Hook......30

ROUSE REGISTER HOOK

Is strictly a register hook and as such is unexcelled. It is very strong and compact the body is made of brass, the working parts of steel. The jaw has a movement of two picas and is operated by a screw of unusually large diameter, insuring unequalled power as well as fine adjustment.

Rouse Register Hook, 6 x 6 ems.....\$0.90
Key for same......20

PATENT IRON GROOVED BLOCK

Sectional View of Patent Iron Grooved Block Showing Hooks in Position.

This block is designed to meet all the requirements of those who print from flat plates. It is made of solid iron three-quarters of an inch thick (unless otherwise ordered) and has a one-eighth inch rabbet on all sides. It is lined over its entire surface in squares of one 12-point em, the grooves being cut diagonally across the block one inch apart. The blocks are usually made two inches larger each way than the largest form that can be printed on the press for which the block is required. Blocks larger than 20 x 25 inches are made in two or four sections at no extra charge. The sections are accurately fitted together with dowel pins and each section may be used as an independent block. Patent Groove Blocks are made to order only. In ordering give name of the press for which a block is required, with the exact bed measurements, and the narrowest margin required. Write for net prices.

PATENT STEREOTYPE BLOCKS

New, Old, and Boston Style—When made regularly, these blocks are $\frac{1}{8}$ inch larger each way than size of back of plate, or $\frac{1}{4}$ inch larger each way than size of printed matter. The Hook, Ratchet Gutter and Clasp Brass occupy a space of $\frac{1}{8}$ inch, including necessary allowance for taking plate on or off freely, and the two bevels on plate are $\frac{1}{8}$ inch wide, or $\frac{1}{4}$ inch in all. The block will take on a plate $\frac{1}{8}$ inch smaller each way than the largest plate, back dimensions, when the Slot in which the Hook moves is one inch; and the smallest plate the Block will take is $\frac{1}{4}$ inch smaller than the size of Block overall.

Patented Ruled Block—The largest plate taken on is one inch smaller each way (back dimensions) than outside measurements of Block; and the smallest plate (back dimensions) is $2\frac{1}{4}$ inches smaller than outside measurements of Block when the Slot in which Hook moves is 1 inch long.

Blocks for Narrow Margins—There are instances where it is impossible to get the desired margins on regularly made Blocks. In such instances we can reduce the widths of Hooks, Ratchets, and Gutters, or increase the variation between largest and smallest plates by lengthening the Slots in which Hooks move, as conditions allow. Whenever margins are apparently too scant, our long experience will usually enable us to overcome the difficulty. In some cases we must make a special charge for such special work. When the Slot in which the Hook moves is made longer than 1 inch on New Style Blocks it requires longer Pinions, and $\frac{1}{2}$ cents per Hook is added to the list price for each $\frac{1}{4}$ inch longer than 1 inch.

All Blocks are made $\frac{1}{8}$ inch thick unless otherwise ordered.

For each extra Hook and Pinion add 50 cents to list; for each Hook less, deduct 25 cents from list.

Rule Blocks—Prices for Blocks with Brass Rule Borders will be quoted on application.

For price of Blocks with Head Brass but no End Hooks, add to List Price of Blocks without End Hooks as follows: 8 to 16 $\frac{1}{4}$ inch measurement, 10 cents; 17 to 27 inch measurement, 15 cents; 27 $\frac{1}{4}$ to 38 $\frac{1}{4}$ inch measurement, 20 cents.

Steel Pinions, 15 cents each. Hooks, 10 cents each.

PARTICULARS OF MAHOGANY AND IRON PATENT BLOCKS

To ascertain price of Block of any style, add together the length and width measurements, then find the nearest "measurements" in second column of Price List; and the price of the style and size of Block required will be found in the same line as the corresponding "measurement" in the second column. When the measurements of the Block required differ from any "measurement" printed in second column, the price of such Block will be the price in the same line as the next lower "measurement."

In sending orders, give the size of Block outside, and also the sizes of the largest and smallest plates to be used on the Block, always measuring the back of the plate. Unless otherwise stated we assume that all plate measurements given are of the back of the plate.

*The measurement is the sum of the outside length and width of a Block added together.

STEREOTYPE OUTFITS

The Ideal Casting Box and Furnace is certainly an Ideal machine as the name implies. This outfit is manufactured in three sizes, 8½x14, 12x20 and 20x26. The 8½x14 will cast a plate three columns wide by twelve inches long if required; the 12x20 will cast a plate ten by seventeen inches, and 20x26 will cast full eight column pages. When this outfit is used for drying matrix the casting box, the form clamped in solidly, is pushed over the metal pot, and the heat radiating from the melted metal dries the matrix quickly and safely. There is no possibility of injury to type in using this machine, notwithstanding the fact that the matrix is dried rapidly and thoroughly. The 8½x14 size is best adapted for small job offices where no large forms are desired. The 12x20 is the best general utility machine, and forms as large as ten by seventeen can be cast, and this is as large as the ordinary electrotpe foundry can handle. By dividing the form a seventeen by twenty plate can be easily turned out. The 20x26 size is especially adapted to cast newspaper pages, and a perfect full page plate can be cast speedily and satisfactorily. In ordering state kind of fuel you will possibly use.—Circular.

IMPROVED FAST LETTERING AND STAMPING PRESS.

Made in two styles. No. 1, size of platen, 12 x 12 inches; size of head, 11 x 11 inches. The wheel at the top carries the screw that raises or lowers the head to any required place, and the set screw at the front binds it firmly. The bed on this machine slides in and out.

Can be furnished in two sizes, 19½ or 26 inches between uprights. Three embossing-stamp holders, varying sizes; one chase, inside measure 5½ inches square; one large plate, full size of head, for electros and brass work; one atmospheric gas heater; set of band holders, and assortment of steel fillers for chase, go with each machine.

Our No. 2 Stamper works on the same general plan as the No. 1 machine, except that the bed is a permanent piece and does not slide like it does on the larger machine. Size of head, 12 x 12; size of platen, 13½ x 13½. Takes work 14 inches wide and any length.

The head will allow a change of six inches in thickness. One chase holder with chase, two plates for electros, one set of fillers for chase, and an atmospheric gas heater, go with each machine.—Circular.

BOSTON STAPLE BINDER

Foot Power and Hand Power

The Boston Staple Binder is built on new lines with valuable features never before used in a stapler. It is the nearest approach to a stitcher yet devised, and its work is neater and better than some of the old line stitchers. It is difficult to distinguish its stapling from the best wire stitching. Staples are strung on tin cores (no shrinking or swelling of wood) with paper covers, and placed in the machine at the right hand side, as shown in the illustration. The cores may be lifted out of the stapler, and replaced, as often as necessary without loss of staples, saving from 25 to 50 per cent. in staples over all other machines. A supporter (an exclusive feature) prevents buckling staples, and permits the use of finer wire than heretofore possible. The result is cleaner work. The driver is a single piece of hardened steel, reversible, and can be instantly replaced when worn without the aid of a wrench. Iron tables are provided at each side of the stitching head with pockets underneath to hold four boxes of staples. The stitcher work table tips forward or back for flat and saddle, and is held in the flat position by the back gauge. Wire No. 26, round, is used, the same being slightly flattened in the process of staple making. The staples are strung on tin cores of 334 each. A paper covering protects the staples from moisture, permits of changes from one size to another without waste, and keeps the staples in line for sure feeding. The feed is positive, the hardened steel pusher being operated by a steel spiral spring which also engages to a locking device at the end of the tin core to hold the same in position. This lock is pulled backward to release the core when sizes of staples are changed. Screw driver and tools are unnecessary after the stapler is assembled, as all changes in staples are made without them. The foot power Boston Stapler has a pedestal and table, as shown in the illustration; the hand power is screwed to a bench or table. The capacity of both styles is three-sixteenths of an inch, flat or saddle work.—Circular.

Style A, Foot Power, saddle and flat, shipping weight, 110 lbs.....	\$35.00
Style B, Hand Power, saddle and flat, shipping weight, 50 lbs.....	25.00

Staples are put up in boxes of 5000, there being two sizes, $\frac{1}{4}$ -inch for thin work, and $\frac{3}{8}$ -inch for thick work.

NO. 6 ACME STAPLE BINDER

The No. 6 Wire-Staple Binder does a greater range of work, and does better work, than any other staple binder. At one stroke of the treadle it drives, clinches, and releases the staple—each operation being independent, though continuous. It holds two hundred and fifty staples at a charge, and round or flat and fine or coarse staples may be used. Staples are fed automatically to the driver by positive pressure on both legs, and clogging is prevented by a device which effectually prevents more than one staple getting under the driver at a time. The clinch is perfect on any thickness. There is ample room for putting in and taking out work, as the driver arm lifts more than an inch above the table after each clinch. There is a long space under the arm for calendar work. The treadle has a positive movement. Every machine is furnished with a strong iron stand. Will bind to a thickness of $\frac{1}{4}$ -inch through any kind of paper, and is furnished with both flat and saddle-back tables, with gauges on the flat bed. For hard or coated papers, when the work is heavy, flat wire staples are used.—Circular.

No. 6 Acme Wire-Staple Binder, capacity $\frac{1}{4}$ -inch and under on all kinds of paper, for round or flat wire, with table and treadle complete.....	\$40.00
Staples for Acme Binder No. 6: No. 21, $\frac{1}{4}$ -inch, round; No. 22, $\frac{5}{16}$ -inch, round; No. 23, $\frac{1}{4}$ -inch, flat; No. 24, $\frac{5}{16}$ -inch, flat—per box of 5,000 of one size.....	1.25

ACME STAPLE BINDER NO. 1

The frame swings on a pivot and lifts high enough to give ample room for putting in and taking out the work—An advantage not obtainable on other low-priced staple binders. It will not clog. Holds one hundred staples. Binds $\frac{1}{4}$ -inch and under. Uses flat staples only.—Circular.

Acme Staple Binder No. 1.....	\$6.00
Staples for Acme Binder No. 1: No. 23 A, $\frac{1}{4}$ -inch, flat; No. 24 A, $\frac{5}{16}$ -inch, flat—per box of 5,000 of one size.....	1.25

STAPLE BINDER No. 10

This machine is built with the following improvements which enhance its intrinsic value. It will use six different sizes of staples, both flat and round wire. It will stitch through the fold and through the back from 2 sheets up to 60 sheets, (flat staples) and from 2 sheets up to 30 sheets (round staples) of ordinary book or pamphlet paper, and 11 inches from margin. The wearing parts are all made of Malleable Steel, and not liable to break or get out of order. The Staple Case adjustment is far superior to any of our other Machines. Only one adjustment, and easily understood.—Circular.

Staple Binder No. 10, complete with Flat and Saddle Table.....	\$34.00
Flat Wire Staples, No. 4, $\frac{3}{8}$ -inch long, per box of 5,000.....	1.25

Round Wire Staples, No. 15, $\frac{1}{2}$ -inch long, per box of 5,000.....	1.25

STAPLE BINDER No. 4

This is a very useful binder for the office or printer, and can be put to a great variety of uses. It will bind papers etc., from 1 to 50 sheets. Holds 125 staples at a charge. It is impossible for staples to clog in the machine, as by the new device one staple must be driven before another can enter. This machine requires no adjustment, feeds automatically, uses three sizes of staples, put up 5,000 in a box, and are exactly the same as used on the No. 10 Binders—viz: No. 4, $\frac{3}{8}$ -inch; No. 5, $\frac{1}{2}$ -inch, and No. 6, $\frac{5}{8}$ -inch.—Circular.

Staple Binder No. 4 \$3.00

SURE SHOT STAPLE BINDER

The most reliable binder for office use. Holds one hundred staples at a charge. Works on the same principle as Acme No. 1, but has no lever. Binds from two to fifty sheets.—Circular.

Price	\$3.00
Staples for Sure Shot Binder: No. 23 A, $\frac{1}{2}$ -inch; No. 24 A, $\frac{3}{8}$ -inch—per box of 5,000 of one size	1.25

WIRE STITCHING MACHINES

No. 000 Monitor Wire Stitching Machine

This Machine is the largest wire stitching machine in the world. It has a range of work from three-eighths to two inches in thickness. The machine embodies all those valuable features and improvements that have been thoroughly tried and tested by constant use for years on the number 00 and No. 0 sizes. It has a range of work from $\frac{1}{8}$ to 2 inches in thickness. Uses 18 x 20 and 19 x 21 $\frac{1}{2}$ flat wire.—Circular.

No. 000 Monitor Wire Stitching Machine.....\$800.00

No. 00 Monitor Wire Stitching Machine

This machine has the largest range of work of any Stitcher in the world except our No. 000. Can be used for pamphlet saddle work or for the heaviest flat or side stitching. Quickly adjusted and simple throughout. finest material and finish; interchangeable parts, gauges, etc. Capacity, 2 sheets to 1 $\frac{1}{8}$ inches. Uses No. 25 round wire, Nos. 20 x 25 and 19 x 21 $\frac{1}{2}$ flat wire.—Circular.

No. 00 Monitor Wire Stitching Machine.....\$700.00

No. 0 Monitor Wire Stitching Machine

This machine is constructed for flat (or side) stitching only. Instantly adjusted for different thicknesses of work, requiring no change of parts whatever. Made of the best material and of the finest finish. Capacity, $\frac{1}{4}$ to 1 $\frac{1}{8}$ inches. Uses 19 x 21 $\frac{1}{2}$ and 20 x 25 flat wire.—Circular.

No. 0 Monitor Wire Stitching Machine.....\$600.00

Styles No. 000, 00, and 0 Monitor Wire Stitchers

No. 1 Monitor Wire Stitching Machine

This machine covers the requirements of large binderies and printing offices because of its large range of work. Will stitch four, eight, and sixteen page pamphlets with No. 30 round wire as neatly and quickly as a small machine; also stitch a book $\frac{3}{4}$ -inch thick of hard paper, or $\frac{1}{4}$ -inch book of medium or soft paper; will produce 75,000 staples in one day of ten hours. Capacity, 2 sheets to $\frac{1}{4}$ inch. Uses Nos. 25, 26, 27, 28 and 30 round and 20 x 25 flat wire.—Circular.

No. 1 Monitor Wire Stitching Machine.....\$450.00

No. 1 $\frac{1}{2}$ Monitor Wire Stitching Machine

Same description applies to this machine, the only difference being in the capacity. Combined flat and saddle table. Capacity, 2 sheets to $\frac{3}{8}$ inch. Uses Nos. 25, 26, 27, 28 and 30 round and 20 x 25 flat.—Circular.

No. 1 $\frac{1}{2}$ Monitor Wire Stitching Machine.....\$300.00

No. 1 $\frac{1}{4}$ Monitor Wire Stitching Machine

Same description applies to this machine, the only difference being in the capacity. Combined flat and saddle table. Capacity, 2 sheets to $\frac{1}{4}$ inch. Uses Nos. 25, 26, 27, 28 and 30 round and 20 x 25 flat wire.—Circular.

No. 1 $\frac{1}{4}$ Monitor Wire Stitching Machine.....\$275.00

Styles No. 2 $\frac{1}{2}$ and 2 Monitor Wire Stitchers

Styles No. 1, 1 $\frac{1}{2}$ and $\frac{1}{4}$ Monitor Wire Stitchers

No. 2 $\frac{1}{2}$ Monitor Wire Stitching Machine

The No. 2 $\frac{1}{2}$ machine is especially adapted for pamphlet work, large or small. It has a long reach from stand to stitching box for calendars, also a long drop for large saddle stitching. The wire is fed into machine between steel rollers. The pressure on the wire can be regulated to a nicety by an eccentric lever, insuring a smooth, perfect, even feed at each stroke. Provided with combination flat and saddle table, back and side gauges, etc. Speed, up to 7,500 staples per hour, according to skill of operator. Capacity, 2 sheets to $\frac{1}{4}$ inch. Uses Nos. 25, 26, 27, 28 and 30 round wire.—Circular

No. 2 $\frac{1}{2}$ Monitor Wire Stitching Machine.....\$175.00

No. 2 Monitor Wire Stitching Machine

No. 2 Monitor, "roll feed." Same description applies to this machine. Capacity, 2 sheets to $\frac{3}{8}$ inch. Uses Nos. 25 to 30 round and 20 x 25 flat wire.—Circular.

No. 2 Monitor Wire Stitching Machine.....\$200.00

MONITOR WIRE STITCHING MACHINE, No. 4

To reach a demand of small offices not provided with power, we herewith show a small foot-power stitcher at a price to bring it within the range of all medium-sized offices. It feeds direct from the spool, making its own staples, at a cost of less than two cents per thousand. Will stitch both flat and saddle work without change of parts for different thicknesses of work or different sizes of wire. It has its own pedestal, similar to our power machines, and is of the same high standard of workmanship and material. Capacity, 2 sheets to $\frac{1}{4}$ inch. Uses Nos. 25, 26, 27, 28 and 30 round wire.

No. 4 Monitor Wire Stitching Machine.....\$100.00

BOOKBINDER'S WIRE, ON SPOOLS

We carry in stock the very best wire procurable, and it will be sold at prices as favorable as any obtainable elsewhere.

The frequent changes in the prices of wire, on account of the fluctuations in the cost of metals, prevents us from quoting prices in this book.

WIRE-STAPLE TABLE

Table showing number of feet, inches and eighths of inches in all sizes of wire from No. 18 to No. 32. To ascertain the number of staples to one pound of wire, measure full length of wire in staple, go to first column on left of table and pass down same until you reach the size that corresponds with the staple measured; pass along to right until you reach size of wire used, shown by top row of figures. Example: if your staple measures 1½ inches, and the size of wire is No. 28, there are 11940 staples to the pound, as shown in table.

PAPER COUNTER

To make ready for use in pad work, count out number of sheets wanted by hand on top of which place the plate, then draw the stab up firmly against the paper. The screw in handle holds the stab in place. To operate, place plate on top of lot to be counted and push stab into paper bearing down at same time.

Price.....\$0.75

THE IDEAL TABLETING APPARATUS

Fig. 1

a perpendicular position. Now, continuing to hold the box in a perpendicular position, withdraw it from under the base-plate, (which is made possible by the ingenious and simple arrangement of the bottom frame of the box,) and the pile is left standing on the base-plate, all ready for the glue-brush.—Circular.

This is a simple, common-sense apparatus, designed to be used by practical printers. It has no clamp or screws to be operated, and is effective, rapid, and thorough. Figure 1 shows the apparatus with iron base-plate in position, forming the bottom of the box, and a small pile of sheets resting on it. All trash, dust, etc., are sifted out as the sheets are put in, the two side-pieces not coming quite together, and thus leave an opening for that purpose. Figure 2 shows a pile of sheets ready for gluing. Having the sheets in the box, as shown in Figure 1, and having placed the iron brick on top of the pile, it is only necessary to take the apparatus by the handle and leg and put it in

Fig. 2

Price, complete, with box, base-plate and iron brick, size 8 x 8 x 18 inches, capacity 6,000 sheets.....\$7.50
Extra iron bricks, weight about 25 pounds, each..... 3.00
Extra base-plates, each 75

COTT'S IMPROVED IDEAL HOLDER AND CLAMP

For straightening up and holding sheets of paper while being glued for tablets. Will take 3,000 sheets; is simple, convenient, and durable; one of the best and handiest articles yet devised for the purpose. Any number of sheets can be handled, whether 100 or 3,000, with equal ease; allows glueing on two sides; it is made sloping so the paper will stand alone while being adjusted. The clamp is separate from the box; is quickly and easily adjusted to the various thicknesses, and any desired pressure can be obtained. The paper is set against the notched board, with the upper edge down, and the board of nearest size is placed against it. When even, the clamp is placed over it and tightened with a fair pressure; afterwards it is lifted out and turned over, so that the edges to be glued are uppermost.—*Circular*.

Price, complete, including five beveled press-boards for tableting\$3.50
Extra clamp, with five boards 2.00
Clamp only 1.40

ELASTIC PADDING GLUE

An elastic, tough, quick-drying preparation, which is applied hot after melting in an ordinary glue pot, and, while entailing more labor, gives better results than the liquid glue. Does not adhere to the edges of sheets as they are removed from the pad, thus preventing tearing of pages in invoice and letter copying books. The color is bright red.—*Circular*.

Price, per pound.....\$0.35

LIQUID PADDING CEMENT

This cement is much superior to glue. Being a liquid it is always ready, and can be applied cold as easily as paste. Blocks of the tablets made with this cement should be cut apart as soon as removed from the press.—*Circular*.

COMBINATION CASE AND TAKE SLUG

Take Slug [Fig. 1]

Case Slug [Fig. 2]

Combined Slug [Fig. 3]

The illustrations herewith presented show a combined "take and case slug," especially adapted to newspaper composition, though applicable to any other kind of piece work. The slug is in two parts, one giving the number of the "take" and the other the number of the case, and is so matched and grooved that it can very readily be extracted from lock-up matter on a galley. The "case" portion of the slug (fig. 2) is to be kept at respective cases. At or near the copy desk is placed a receptacle for the "take" portion (fig. 1). When a compositor takes copy he takes the first slug out of the receptacle, places it in his stick, and arriving at his case, places the case slug alongside of the one in the stick, the combined slug being shown in figure 3.

HOERNER'S COMBINATION SHUTEBOARD AND TYPE-HIGH MACHINE

This machine will take blocks ten inches wide, and any length, the carriage, or guide frame, for plane being movable from side to side while in operation; blocks full width of bed are shaved at one setting. For trimming rules, slugs, or furniture, for cutting miters and squaring blocks, the guide frame is taken off and either of the planes may be used on side of the bed.—Circular.

Complete with two planes (one file plane and one knife-plane).....\$35.00

CHALLENGE TYPE-HIGH MACHINE

For making cuts or electrotypes mounted on wood type-high and true to gauge; will save one-half the time usually spent on make-ready. Simple and easily understood. For squaring, the planer is placed in groove in front of machine and used same as ordinary shoot board and plane. The cutting surface is a special hand-cut file and never requires sharpening.—Circular.

Challenge Type-High Machine, including 8 x 12 zinc galley.....\$15.00

SUPERIOR TYPE-HIGH GAUGE

This little instrument is designed to cover the wants of every printer who uses mounted electrotype plates, half-tones, wood cuts, rules, borders, ornaments and initials. This Gauge is absolutely accurate, is micro-ground to .018 of an inch and will tell in an instant whether every part is type-high and therefore ready to put on the press. The one end is a cylinder and bearer gauge and with it the cylinder, bearers and rollers of a press can be adjusted accurately. The time lost is an immense item where guess work is used in fixing forms. With the Superior Type-High Gauge all this time is saved.

Superior Type-High Gauge, each.....\$1.50

TYPE STANDARD

The following is the standard adopted by the International Typographical Union. The basis of measurement is the lower-case alphabet from a to z inclusive, and the ems used are the same body as the type measured:

41 Point.....	18 ems	8 Point.....	14 ems
5 Point.....	17 ems	9 Point.....	13 ems
54 Point.....	16 ems	10 Point.....	13 ems
6 Point.....	15 ems	11 Point.....	13 ems
7 Point.....	14 ems	12 Point.....	13 ems

The thirteen letters used most frequently, viz., a, c, d, e, h, i, m, n, o, r, s, t, u, are in all cases to fill one-half the space occupied by the entire twenty-six letters.

INFORMATION

NEWSPAPER ESTIMATES

Table showing the number of ems of the different sizes of newspaper type in a line, the number of lines necessary to make 1000 ems, and the length in inches; the number of ems in the regular lengths of column, the number of leads required, and the number of 2-point leads (13 ems in length) contained in one pound.

NUMBER OF EMS IN A SQUARE INCH OF TYPE, AND COST PER SQUARE INCH AT VARIOUS RATES PER THOUSAND EMS.

NOTE—Where a fraction of an em remains the next larger whole number is taken. Therefore there are actually 207.36 five-point ems in a square inch (figuring 72 points to the inch) instead of 208.

Of course, as will at once occur to any one making use of the above table, the easiest way to use it is to take lots of 10, 100, or 1000 square inches.

TO ESTIMATE THE WEIGHT OF MATTER

To ascertain the quantity of plain type required for a newspaper or magazine, or any other work, find the number of square inches and divide the same by four; the quotient will be the approximate weight of matter; but as it is impossible to set the cases entirely clear, it is necessary to add 25 per cent to large fonts and 33 per cent to small fonts to allow for dead letter. The average weight of 12 inches of solid matter set in 13 ems pica measure is 6½ pounds; if leaded it will weigh about 5½ pounds. A single column of six-column folio, solid, will weigh 10½ pounds, requiring about 13 pounds of type, while the same length column leaded with 2-point leads will contain but 7½ pounds solid matter, requiring about 10 pounds to set the same. The following table showing what each box in the type case will hold, will be found useful in ordering sorts:

LETTERS	WEIGHT IN BOX
a c d h i m n o r s t u.....	2 pounds
e.....	3 pounds
b f g l p v w y and comma.....	15 ounces
k j q x z . : - ' ! ? f f i n and all figures.....	6 ounces
Caps, small caps and side sorts.....	5 ounces

CARE OF ROLLERS

Soft, thin ink left on rollers over night, and having them carefully washed in the morning before working them, will preserve them longer in cold weather than if put away clean. Pans of water placed at the bottom of a closet containing rollers are also conducive to their well keeping.

The following method of recuperating a hard and unworkable roller has been found to work admirably: After washing the roller carefully with lye, cover the surface with a thin layer of molasses, and lay aside till next morning. Then wash it with water and let it hang till dry enough for using.

A well-built roller closet, as nearly air-tight as possible, is a necessity in every press-room. Rollers are among the most expensive perishable articles, and if carelessly attended to they become doubly so.

A VALUABLE RECEIPT

Compositors who suffer from sore or dry skin on their fingers will find the following mixture very beneficial:

Glycerine, 1 ounce; rosewater, 3 ounces; carbohc acid, ¼ ounce.

Before going to bed, wash the hands in warm water, then pour a little of the mixture into the palm of the hand, and rub thoroughly into the skin. The carbohc acid is very healing; the rosewater is a good diluent of the glycerine, and likewise tends to counteract the smell of the carbohc acid, which is unpleasant to some. Any druggist can supply this for a few cents.

A PLACE FOR EVERYTHING

Order, convenience and simplicity in arranging a working place ought to be carefully observed. A crowded, helter skelter condition of things makes daily labor irritating and uncomfortable; while ease in getting at or using any implement or material expedites its execution and increases the profits of an office.

TELEGRAPH CODE

TELEGRAPH CODE

The Telegraph Code herewith given will be found very convenient and economical to our customers who have occasion to wire for type. For example: A patron desiring us to ship by United States Express 25 pounds of 12 point Barnhart Old Style, 3 fonts of 18 point Old Roman Bold and 1 font of 24 point Plate Text No. 4, would wire as follows: "Unisex Welfare Bacca; Faction Palmated Model; Pacadeful Palpus Morose." It should be understood that this code applies only to type shown in this Specimen Book, and this code supersedes all other codes appearing in previous catalogues.
